ACARS - A Users Guide Aug 01 2022 Aircraft Communications Addressing and Reporting System (ACARS) is a digital datalink system for transmission of short,and relatively simple messages between aircraft and ground stations using the airband VHF radio link. The message protocol was designed by Aeronautical Radio Incorporated (ARINC) to replace their VHF voice service and deployed in 1978 using telex type format. SITA, a multinational information technology company, later augmented their worldwide data network by adding ground radio stations to provide ACARS service.

Flying Blind Jul 28 2019 'The astoundingly well reported and beautifully told story of the downfall of what was once a great American company. A must-read' Bethany McLean, bestselling author of The Smartest Guys in the Room 'Compelling and richly reported, Flying Blind is about so much more than the sad decline of Boeing and the tragic mistakes that led to the 737 Max disaster. It's also the urgent story of how the almighty profit motive supplanted a culture of engineering excellence in boardrooms across America' Brad Stone, bestselling author of The Everything Store The definitive exposé of how Boeing put profit before passengers, leading to the devastating loss of life in the 737 MAX crashes and the downfall of an American business giant In examining the history of the 737, Flying Blind explores how Boeing's new management degraded a highly-regarded plane with cost-focused mandates and skimped on testing in the race to match a competing plane from Airbus. How Boeing outsourced software work to poorly paid graduates in India and convinced the US Federal Aviation Authority to put the MAX into service without requiring pilots to undergo simulator training, and how ultimately these failures resulted in the deaths of 346 Boeing passengers. Framed around the 737 MAX crashes, Flying Blind is the definitive exposé that for the first time tells the larger, decades-long story of how a corrupt corporate culture paved the way for a cataclysm that cost lives. 'Vividly written and meticulously researched, Flying Blind is a story everyone - every consumer, every citizen, every worker in every industry - needs to read' Diana B. Henriques, New York Times bestselling author of The Wizard of Lies: Bernie Madoff and the Death of Trust 'A gripping narrative and required reading for anyone who wants to understand how one of America's mightiest corporations veered so badly off course' Sheelah Kolhatkar, New Yorker staff writer and bestselling author of Black Edge

Serious Play Mar 04 2020 Successful innovation demands more than a good strategic plan; it requires creative improvisation. Much of the "serious play" that leads to breakthrough innovations is increasingly linked to experiments with models, prototypes, and simulations. As digital technology makes prototyping more cost-effective, serious play will soon lie at the heart of all innovation strategies, influencing how businesses define themselves and their markets. Author Michael Schrage is one of today's most widely recognized experts on the relationship between technology and work. In Serious Play, Schrage argues that the real value in building models comes less from the help they offer with troubleshooting and problem solving than from the insights they reveal about the organization itself. Technological models can actually change us--improving the way we communicate, collaborate, learn, and innovate. With real-world examples and engaging anecdotes, Schrage shows how companies such as Disney, Microsoft, Boeing, IDEO, and DaimlerChrysler use serious play with modeling technologies to facilitate the collaborative interactions that lead to innovation. A user's guide included with the book helps readers apply many of the innovation practices profiled throughout. A landmark book by one of the most perceptive voices in the field of innovation.
