The Complete Guide to Night and Lowlight Photography Feb 22 2022 Aimed at serious photographers, this lavishly illustrated guide takes a close look at every detail of lowlight photography. Michael Freeman (*The Complete Guide to Digital Photography, Mastering Digital Black & White Photography*) offers in-depth analysis of the many techniques photographers must master for night and lowlight shooting. Point by point, he discusses how to keep the camera steady, what lenses and camera settings to use, and how to best apply flash, bracketing, image-stabilizing, vibration reduction, and noise reduction. He also outlines common lowlight situations, from stormy weather and deep shade to twilight, moonlight, city lights, and nightclubs. Finally, Freeman examines software programs and processes that will increase the quality of lowlight photographs.

The Last Polar Bear May 16 2021 Scientists agree that by the end of this century the polar bear will be the first mammal threatened with extinction due to climate change. "The Last Polar Bear" is the first book to fully document that story. The continued survival of these magnificent white bears in their warming, and melting, Arctic world is uncertain, yet their fate is also a wake-up call compelling us to act now to stem global warming. Through Steven Kazlowski's unparalleled imagery, the most critical environmental issue of our time is brought to life. "The Last Polar Bear" places the reality of climate change in our hands. We see the plight of the polar bear, an animal already feeling the detrimental effects of our reliance on fossil fuels, as its icy habitat melts. Over the course of the last six years, wildlife photographer Steven Kazlowski has photographed the polar bear in its wild habitat, from Hershel Island in Canada to Point Hope in Alaska. "The Last Polar Bear" pairs his intimate images with anecdotes about his Arctic adventures, as well as authoritative essays about the polar bear in the context of climate change. Alaska based writers Richard Nelson, Charles Wohlforth, Nick Jans, and leading USGS polar bear biologist Steven C. Amstrup draw on decades of experience in the Arctic to cover the biological, cultural, and anthropological aspects of climate change. Dan Glick, long-time correspondent for "Newsweek", addresses the history of climate change while Frances Beinecke, president of the Natural Resources Defence Council, and Theodore Roosevelt IV offer perspectives on activism and politics.

Spectral Sensing Research For Surface And Air Monitoring In Chemical, Biological And Radiological Defense And Security Applications Dec 31 2019 This book provides unique perspectives

on the state of the art in multispectral/hyperspectral techniques for early-warning monitoring against chemical, biological and radiological (CB&R) contamination of both surface (e.g. land) and air (e.g. atmospheric) environments through the presentation of a comprehensive survey of the novel spectroscopic methodologies and technologies that are emerging to address the CB&R defense and security challenges of the future. The technical content in this book lends itself to the non-traditional requirements for point and stand-off detection that have evolved out of the US joint services programs over many years. In particular, the scientific and technological work presented seeks to enable hyperspectral-based sensing and monitoring that is in real time and in-line; low in cost and labor requirements; and easy to support, maintain and use in military and security-relevant scenarios.
