The Bump Class Sep 02 2022 "This is one of the best books I have read on the subject" *The Sun* "Fresh, witty and reassuringly down-to-earth" *You Magazine* Fed up with advice that did not take into account a less than perfect pregnancy, Dr Chiara Hunt and Marina Fogle set up their pregnancy course, *The Bump Class*, in London in 2013. They wanted to help prepare new mothers thoroughly for the birth of their babies and instil in them the joy and happiness of birth, no matter what the method, time or setting of the labour. This book is a pragmatic and honest look at pregnancy, giving pregnant women and new mothers sensible and practical advice on what is to be expected (as well as the often unexpected!) in a friendly and open manner. Chiara and Marina believe that there is no such thing as a "normal" pregnancy or birth – every woman is different and that should be celebrated, not ignored. *The Bump Class* is filled with charming illustrations, impartial advice, style tips and hilarious anecdotes from both of the authors, as well as personal stories from the women who have been welcomed onto their course. This book will provide every pregnant woman with the support and reassurance that is so essential at the most crucial time in any woman's life.

So You Want a Meade LX Telescope! Dec 01 2019 Computers and Astronomy Perhaps every generation of astronomers believes that their telescopes are the best that have ever been. They are surely all correct! The great leap of our time is that computer-designed and machined parts have led to more accurately made components that give the astronomer ever better views. The manual skills of the craftsman mirror grinder have been transformed into the new-age skills of the programmer and the machine maker. (The new products did not end the work of craftsman telescope makers, though. Many highly skilled amateur/professional opticians continued to produce good-quality mirrors that are still seen today.) Amateur-priced telescopes are now capable of highly accurate tracking and computer control that were once only the province of professionals. This has greatly increased the possibilities of serious astronomy projects for which tailor-made software has been developed. Add a CCD camera to these improved telescopes (see Chap. 3), and you bring a whole new dimension to your astronomy (see Fig. 1. 1). Look Before You Leap! But first, a word of caution. Unless you are already familiar with astronomy and basic telescopes, it is not wise to start spending large amounts of money on a well-featured telescope. Such an instrument might otherwise be subsequently abandoned due to a perceived overcomplexity coupled with a waning interest.
