[Microsoft Office 2013: Illustrated, Third Course Apr 03 2020](#) Praised by instructors for its concise, focused approach and user-friendly format, the Illustrated Series engages both computer rookies and hot shots in mastering MICROSOFT OFFICE 2013 applications quickly and efficiently. Skills are accessible and easy-to-follow thanks to the Illustrated Series' hallmark 2-page layout, which allows students to see an entire task in one view. New Learning Outcomes outline the skills covered in each lesson, and larger full-color screens represent exactly what students should see on their own computers. Each unit begins with a brief overview of the principles of the lesson, and introduces a case study for further application. [Smart and Green Solutions for Transport Systems](#) Nov 03 2022 This proceedings book gathers selected papers presented at the 16th Scientific and Technical Conference "Transport Systems. Theory and Practice", organised by the Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology. The conference was held on 16–18 September 2019 in Katowice (Poland). More details at [www.TSTP.polsl.pl](http://www.TSTP.polsl.pl) Which of the multi-criteria methods should be applied to support decision-making processes while tackling problems of sustainable transport solutions? How can individual issues encountered when implementing smart solutions in transport systems be solved? What advanced tools can be used to assess the current condition of selected elements of transport systems (both in terms of transport infrastructure and traffic streams)? What data concerning transport processes can be collected automatically and how can we use it? What is the right approach to the problem of the development of the spatial planning of transport systems? This book provides the answers to these and many other questions. It also includes a wealth of numerical analyses based on significant data sets, illustrating the close affiliation between smart transport systems and environment-friendly solutions. The book primarily addresses the needs of three target groups: • Scientists and researchers (ITS field) • Those working for local authorities (responsible for the transport systems at the urban and regional levels) • Representatives of business (traffic strategy management) and industry (manufacturers of ITS components).

[Progress in Nephrology](#) Jun 05 2020 The present volume contains the edited proceedings of the Vth Symposium of the "Gesellschaft für Nephrologie" held in Lausanne, Switzerland, from September 21 to September 23, 1967. The manuscripts were arranged according to their contents rather than to their titles. An attempt was made to divide the allotted space between different contributors according to the apparent importance or originality of the contributions. Most of the papers submitted were written in either German or a rather inarticulate English, and subsequently, have been translated into English by the editors and their collaborators. The editors are indebted to Mr. R. Darling, student of medicine of the Faculté de Médecine de l'Université de Lausanne, for reviewing the English translation. Editing was limited to requirements based on form rather than on content. In a few instances, manuscripts which were inadequate in form were accepted because their contents appeared interesting or important. A very few manuscripts were either not submitted or could not be included in the present proceedings, because they did not satisfy the editorial standards. Some papers are published in the present proceedings in abstract form because they have been submitted elsewhere for full publication. The editors' responsibility does not extend to the factual content of the manuscripts. The editors wish to apologize for the long delay in publishing these proceedings, a delay which may be attributed to difficulties in communication and cooperation with various authors. [The 10 Principles of Food Industry Sustainability](#) Oct 22 2021 Although the food industry is beginning to make headway with its sustainability initiatives, substantially more progress is needed in order to feed the world's growing population sustainably. The challenge is that the topic of sustainability can seem overwhelming and there is limited information that is specific to the food industry. Written by an experienced food industry professional with years of experience in sustainability, [The 10 Principles of Food Industry Sustainability](#) inspires and informs the progress required to nourish the population, revitalize natural resources, enhance economic development, and close resource loops. The book makes this complex topic approachable and actionable by identifying the most pressing sustainability priorities across the entire food supply chain and showing, with tools and examples, how producers, processors, packers, distributors, marketers and retailers all play a role in advancing improvement. The book begins with an overview of the Principles of sustainability in the food industry: what they are and why they matter. Subsequent chapters focus on each of the Ten Principles in detail: how they relate to the food industry, their global relevance (including their environmental, health, and social impacts), and the best practices to achieve the potential of meaningful and positive progress that the Principles offer. Specific examples from industry are presented in order to provide scalable solutions and bring the concepts to life, along with top resources for further exploration. The Principles, practices, and potential of sustainability in the food industry covered in this book are designed to be motivating and to offer a much-needed and clear way forward towards a sustainable food supply.

[Green Up!](#) Apr 27 2022 There are unique greening solutions and practices that help create a lifestyle shift, improving the health of living and working spaces for its occupants from a personal, business, environmental, and profitable perspective. Short-term and long-term considerations are important elements when moving forward towards healthy practices in lifestyles, choices, and site designs. This book addresses a myriad of greening practices that can be applied to structures in our urban, suburban, and rural cultures. From the loft to the neighborhood, the office spaces to the public spaces, and the schools to the communities, this book outlines how business owners and residents can integrate scale appropriate green solutions into their lifestyles. [Green Up!: Sustainable Design Solutions for Healthier Work and Living Environments](#) includes detailed illustrations and photographs to help you understand design opportunities for your space. Stevie Famulari provides unique insights and inspires business owners, residents, and planners to develop their own green understanding and design solutions. Illustrations and photographs of applied greening are included throughout the book to help inspire your own goals and design, and then transform them to reality. The author breaks down the misconceptions of the complexity of sustainability and green practices. Greening is a lifestyle change, and this step-by-step instruction guide lets you know how easy it is to transition to the green side!

*Rethinking Clusters* Jun 17 2021 This volume discusses how different geographical spaces can enhance or hinder the capacity of a variety of organizational settings to achieve economic value creation in the pursuit of sustainable regional development. In order to provide the most comprehensive picture of new sources of value creation for sustainable transitions, the book collects contributions that tackle this issue from a variety of perspectives, and adopts a systemic approach where macro, meso and micro-levels of analysis are intertwined in three sections. This multidisciplinary and interdisciplinary approach comes from scholars operating in the fields of planning, economic geography, social entrepreneurship and organizational management. The first section of the book adopts a macro-level approach linking sustainability to the regional development theme, and addresses how organizations work between different social interests to produce outcomes not previously realized. The second section of the book focuses on the spatial dimensions of sustainable development, with particular clusters, industrial districts and regions considered as relevant units of analysis (meso-level analysis). The third section of the book is dedicated to a micro-level approach, illustrating how to drive social entrepreneurship activities, which are based upon sustainable business models centered in the creation of a shared value. The book is geared towards scholars working on sustainable development issues intersecting the disciplines of regional studies, economic geography and management, and will appeal to geographers and researchers in economic development, business innovation, and sustainability transitions.

*Selected Papers from the 8th Symposium on Micro-Nano Science and Technology on Micromachines* Dec 24 2021 This Special Issue presents selected papers from the 8th Symposium on Micro-Nano Science and Technology on Micromachines, 31 October–2 November, 2017, in Hiroshima, Japan. We encouraged contributions of significant and original works in order to deeply understand physical, chemical, and biological phenomena at the micro/nano scale and to develop applied technologies. The conference covered the following main topics: 1: Precision machinery lubrication design 2: Material dynamics strength 3: Hydrodynamics 4: Thermal engineering 5: Production processing mechanical materials 6: Robotics mechatronics 7: Medical biotechnology 8: Micro/nano system The papers that attracted the most interest at the conference, or that provided novel contributions, were selected for publication in *Micromachines*. These papers were peer-reviewed for validation of the research results, developments and applications.

*Managerial Strategies and Green Solutions for Project Sustainability* Feb 11 2021 Sustainability has become an increasingly vital topic of discussion in modern society. Various businesses and their professionals have begun adopting environmentally friendly practices and continue to search for new ways to incorporate sustainability into their protocol. *Managerial Strategies and Green Solutions for Project Sustainability* is an essential reference source for the latest scholarly research on core concepts of project sustainability and its applications. Featuring extensive coverage on a broad range of topics and perspectives, such as energy systems, climate change, and human capital, this publication is ideally designed for managers, researchers, and students seeking current information on structured managerial strategies for planning, executing, and assessing project sustainability performance.

*Smart Energy Strategies* Mar 15 2021 The enormous challenge of creating a longterm sustainable energy system calls for the participation of engineers, natural and social scientists. They can contribute both through their research and by helping to craft strategies that steer the future development of the system. A sustainable energy system cannot be developed by technical fixes alone; action is required on a broad front, including institutional and regulatory changes. There is an abundance of scientific evidence on which to base decisions on how to proceed. Still, research has a crucial role to play as well. *Smart Energy Strategies* highlights smart solutions: advances in technical and social-science energy research, particularly advances related to new information technology (e.g. control and communication); and experience with targeted applications of information technology in the supply and consumption of energy. The conference has focused on smart strategies taking into account current technical and institutional systems, with their inertia and shortcomings; future energy-related challenges: energy security; the growing energy needs of the disadvantaged; and unintended consequences of energy systems, particularly climate change but also uncontrolled money flows; smart technical, institutional, and regulatory mechanisms for meeting these challenges.

*Urban Growth and the Circular Economy* Jul 27 2019 Presented at the 1st International Conference on Urban Growth and the Circular Economy that was held in Alicante, Spain the papers included in this book focus on the continuing and rapid growth of cities and their regions of influence and how that has led to the need to find new solutions which allow for promoting their sustainable development. The quest for the Sustainable City has until recently focused on the efficient use of resources with the application of technical advances giving rise to the definition of SMART Cities. The economic model emphasised however is still "linear" in the sense that the design and consumption follows the pattern of extraction of natural resources, manufacturing, product usage and waste disposal. The continuous growth of urban population has recently given rise to the emergence of a new model which responds better to the challenges of natural resource depletion as well as waste management. This model has been called the "circular economy". The circular economy is a recent concept based on the reuse of what up to now has been considered wastes, reintroducing them into the productive cycle. The objective of the circular economy is to reduce consumption and achieve savings in terms of raw materials, water and energy, thus contributing to the preservation of resources in order to reach sustainable development. One of the most important of these resources is water which is becoming a scarce commodity in an ever expanding world whose population demands a better standard of living. Water is required for agricultural purposes as well as by industry, in addition to its use by the general population. The recycling of water is an essential component of the circular economy. There is no possibility for the success of a long term economic policy without addressing the problems of natural resources and environmental pollution, which will affect the reuse of materials and products. The current market economy based on a linear model from resource extraction, manufacturing, consumption and waste disposal, has not proved a long term suitable solution, in spite of the substantial efforts made in reducing its environmental impacts. This is largely due to the continuous population growth, in a society that demands high standards of living, thus requiring an ever increasing share of natural resources.

*Green IT - A Global Problem and an Imperative Business Opportunity* Jul 07 2020 Doctoral Thesis / Dissertation from the year 2009 in the subject Organisation and Administration, grade: 60, University Of Wales Institute, Cardiff, language: English, abstract: Economic crisis and environmental sustainability are two major concerns the world is facing globally in recent times. Enterprises with their toughest times of economical survival need to pay attention on the environmental problem that is endangering existence. Although they are attempting to strongly hold their corporate social responsibility and aggressively planning Green Initiatives. But in this current time of crisis, unless an initiative does not satisfy their bottom line will have a short term consideration. The study attempts to highlight contemporary solution of Green IT which turns the climate change issue into an area of business opportunity. Typically Green IT adoption is associated as an investment towards acquiring energy efficient hardware devices in data centers to save power and reduce carbon emissions. The paper uncovers Green IT approach of server consolidation; through which enterprises can achieve eco-efficiency that relates to controlling environmental impacts as well as reducing cost of operations. Server consolidation in data centers are proven in the study to be strongly correlated with cost saving business advantages. The correlation analysis done from the survey responses clarifies the general misconception that Green solutions are not always cost driven but can also be cost effective. Out of detailed interviews conducted for the research, it is evident that enterprises are at a slow pace to accept Green IT solutions in UAE as they are not entirely realizing the benefits it derives. Realization of benefits is ambiguous due to the lack of appropriate tools that can quantify benefits gained from implementing Green IT. For the same, the recommendation include a measurement model to signify and provide strong business case showing imperative cost saving values for Green IT approach. The model calculates total operational as well as environmental savings with Green solution implementation in data centers. To further streamline Green IT benefit realization, the study finally recommends Rapid Business Justification process by which organizations can evaluate how Green IT solutions can save power, save cost and ultimately save the environment. The process aims to measure business benefits of Green IT initiative and justify tangible economical value. With the implementation of the process, enterprises will be able to substantiate quantitative business benefits that will encourage adoption of Green solutions aggressively.

*Green Cleaning For Dummies* May 17 2021 An authoritative guide to reducing household exposure to hazardous chemicals Thousands of household products contain toxic ingredients. Today, more and more people are seeking more natural cleaning methods to reduce their exposure to harsh chemicals. From the kitchen and bath to the living room and laundry, *Green Cleaning For Dummies* provides readers with green solutions to every common cleaning chore. Focusing on organic, nontoxic, sustainable alternatives to conventional cleaning products, it's packed with suggestions and tips for effective cleaning, and even offers green solutions for sprucing up patios, garages, vehicles, and the exterior of a house.

*Green Housekeeping* Jan 31 2020 Christina Strutt of Cabbages & Roses reveals how to have a calmer, healthier, eco-friendly home. Saving the planet for future generations is a laudable aim, but what about the current populace? Why wait when even quite small lifestyle changes can make a big difference now? *Green Housekeeping* is full of advice and information to help you take a more sustainable path. Recycling, reusing and shopping at farmers' markets are a good start, but cutting down on the use of poisonous chemicals is just as important – it's perfectly possible to clean a house using nothing more than lemons, bicarbonate of soda, vinegar and plain water. Here old-fashioned methods are complemented by newer ideas and innovations, and applied not only to cleaning but also to caring for clothes, furniture, and even silver and glassware. Growing some of your own vegetables, fruit and herbs can be very satisfying, and you can use any extras to make jams, oils and chutneys using the handy tips and delicious recipes. Make beauty preparations and bath oils, too, for soothing, effective treatments to enhance everyday health and wellbeing. To become eco-friendly doesn't require self-sacrifice – just some readjustment; and

by following the advice in this invaluable guide you will find yourself living a calmer, greener life.

*Comparative CSR and Sustainability* Nov 10 2020 This book breaks new ground by providing a structured and cohesive set of contributions on the actions, developments, problems and theories of corporate social responsibility (CSR). With new case studies from the UN's Least Developed Countries (LDCs), contributors in this book investigate how firms in Eastern and Western countries are responding to and making use of evolving CSR guidelines. The book addresses the following questions: is CSR simply greenwashing or an authentic commitment to responsible corporate citizenship? Has globalization drawn CSR conduct in LDCs closer to that of industrialized countries? Stakeholder theory, actor-network theory and a new orbital theory of accountability are applied to give coherence to the case studies. Other chapters address greenwashing in reports, the impact of CSR in socially stigmatized occupations, an analysis on what responsibility precisely entails in CSR, and the interface between law and CSR. The book also considers the impact of COVID-19 on the hospitality industry, and includes a contribution from Ukrainian scholars, one written while their city of Kharkiv was under attack by Russian forces. This book will be a useful reference to those interested in discussions on crises, climate change, and SDGs and realizing sustainable goals through CSR.

*Smart and Green Solutions for Civil Infrastructures Incorporating Geological and Geotechnical Aspects* Jul 31 2022 Advancement in design and construction to embrace the impact of rapid global urbanization growth in infrastructure development is inevitable. This proceedings volume includes many smart and green solutions for civil infrastructures, incorporating geotechnical and engineering geology aspects. The articles presented in this volume are attempts made by the researchers and practitioners to address many geotechnical challenges, based on the state-of-the-art practices, innovative technologies, new research results and case histories in construction and design towards safer and cost effective infrastructures. This volume covers a wide range of topics with direct relevance to people within the broad field of geomechanics, including consultants, contractors, academics, materials suppliers and the owners and operators of civil infrastructures. Many papers associated with numerical modeling of transport infrastructure, advanced soil and rock testing, field monitoring, tunnelling, expansive soils, geo-center motion, triaxial and dynamic testing, piles etc. are included. The content is based on the contributions to the 6th GeoChina International Conference on Civil & Transportation Infrastructures: From Engineering to Smart & Green Life Cycle Solutions -- Nanchang, China, 2021.

*Project Management and BIM for Sustainable Modern Cities* Nov 22 2021 This volume presents innovative work on innovative methods, tools and practices aimed at supporting the transition of Asian and Middle Eastern cities and regions towards a more smart and sustainable dimension. The role of the built and urban environment are becoming more pronounced in Asia and Middle East as the regions continues to experience rapid increase in population and urbanisation, which have only led to an increase in environmental degradation but also rise in energy consumption and emissions. Individual chapters covers timely topics such as sustainable infrastructure, transportation, renewable energy, water and methods supporting an innovative and sustainable development of urban areas. Real-world examples are presented to highlight recent developments and advancements in design, construction and transportation infrastructures. The volume is based on the best contributions to the 2nd GeoMEast International Congress and Exhibition on Sustainable Civil Infrastructures, Egypt 2018 – The official international congress of the Soil-Structure Interaction Group in Egypt (SSIGE).

*Handbook of Research on Applied E-Learning in Engineering and Architecture Education* Sep 01 2022 The integration of technology in education has provided tremendous opportunity for learners of all ages. In today's technology-focused society, the traditional classroom setting is being transformed through online learning platforms, collaborative and experimental methods, and digital educational resources that go hand-in-hand with non-digital learning devices. The Handbook of Research on Applied E-Learning in Engineering and Architecture Education reviews the latest research available on the implementation of digital tools and platforms within the framework of technical education, specifically in the subjects of architecture and engineering. Taking a global approach to the topic of online learning environments for technical education at all grade levels, this comprehensive reference work is ideally designed for use by educators, instructional designers, and researchers from around the world. This handbook contains pertinent research on a variety of educational topics including online learning platforms, mobile and blended learning, collaborative learning environments, gaming in education, informal learning, and educational assessment.

*Environmentally-Benign Energy Solutions* Jan 25 2022 This book provides high-quality research results and proposes future priorities for more sustainable development and energy security. It covers a broad range of topics on atmospheric changes, climate change impacts, climate change modeling and simulations, energy and environment policies, energy resources and conversion technologies, renewables, emission reduction and abatement, waste management, ecosystems and biodiversity, and sustainable development. Gathering selected papers from the 7th Global Conference on Global Warming (GCGW2018), held in Izmir, Turkey on June 24–28, 2018, it: Offers comprehensive coverage of the development of systems taking into account climate change, renewables, waste management, chemical aspects, energy and environmental issues, along with recent developments and cutting-edge information Highlights recent advances in the area of energy and environment, and the debate on and shaping of future directions and priorities for a better environment, sustainable development and energy security Provides a number of practical applications and case studies Is written in an easy-to-follow style, moving from the basics to advanced systems. Given its scope, the book offers a valuable resource for readers in academia and industry alike, and can be used at the graduate level or as a reference text for professors, researchers and engineers.
