TCM Analyst 1.0 and User's Guide Oct 28 2019

Transportation control measures (TCMs) are possible tools for improving regional air quality as defined in the Clean Air Act Amendments (CAAA). The TCM Analyst computer package was prepared to provide a tool for evaluating the effectiveness of TCMs on a regionwide basis and is intended to be used by transportation engineers and planners. The TCM Analyst can be used to estimate the travel and emission effects of selected TCMs and can also evaluate their cost-effectiveness. Eleven TCMs are included for evaluation in the TCM Analyst: (1) telecommuting, (2) flextime, (3) compressed work week, (4) ridesharing, (5) transit fare decrease, (6) transit service increase, (7) transit plazas, (8) parking management, (9) HOV lanes, (10) traffic signalization, and (11) intersection improvements. Emission changes are evaluated for both the carbon monoxide (CO) and ozone emission seasons. Additionally, three analysis tools are included to help determine the effects that specific inputs have on the estimated benefits of a TCM.
