Musical Sound Effects Oct 04 2022 For decades performers, instrumentalists, composers, technicians and sound engineers continue to manipulate sound material. They are trying with more or less success to create, to innovate, improve, enhance, restore or modify the musical message. The sound of distorted guitar of Jimi Hendrix, Pierre Henry's concrete music, Pink Flyod's rock psychedelic, Kraftwerk 's electronic music, Daft Punk and rap T-Pain, have let emerge many effects: reverb, compression, distortion, auto-tune, filter, chorus, phasing, etc. The aim of this book is to introduce and explain these effects and sound treatments by addressing their theoretical and practical aspects.

Correlative Light and Electron Microscopy III Sep 03 2022 Correlative Light and Electron Microscopy III, Volume 140, a new volume in the Methods in Cell Biology, series continues the legacy of this premier serial with quality chapters authored by leaders in the field. This is the third volume of Methods in Cell Biology covering current Correlative Light and Electron Microscopy (CLEM) methodologies. The field of CLEM is still growing and new combinations of imaging technologies provide exciting new insights. The chapters deal with different approaches to analyze the same specimen by more than one imaging technique to gain more and/or better information over applying each imaging technique separately. The strengths and application area of each presented CLEM approach are highlighted. This volume explores the aspects of sample preparation of diverse biological systems for different CLEM approaches and will serve as a valuable resource to researchers in the field of cell biology. Contains contributions from experts in the field Covered topics include targeted ultramicrotomy and high-precision correlation Presents recent advances and currently applied correlative approaches Gives detailed protocols allowing the application of workflows in one's own laboratory setting Covers CLEM approaches in the context of specific applications Aims to stimulate the use of new combinations of imaging modalities

Dermatologic Ultrasound with Clinical and Histologic Correlations Aug 22 2021 Significant technological advances have produced equipment that allows imaging of the skin with variable frequency ultrasound in previously unseen detail and provides a range of dynamic data that is currently unmatched by any other technology. *Dermatologic Ultrasound with Clinical and Histologic Correlations* is a comprehensive introduction to ultrasonography of the skin, nails, and scalp as it relates to the assessment and diagnosis of dermatologic diseases. It provides radiologists, sonographers, dermatologists, and physicians with interest in skin imaging with a concise understanding of the diagnosis of dermatologic conditions through extensive high-resolution gray scale and color Doppler ultrasound images and presents classical correlations of clinical dermatologic lesions with sonographic and histologic findings. Featuring more than 1700 images, this text-atlas provides an excellent starting point in learning about this topic. Featuring contributions from world-renowned authorities in the field of superficial ultrasound imaging, the book reviews the technical considerations relating to color Doppler ultrasound of the skin; surveys the dermatologic entities that can be visualized with ultrasound imaging, such as cutaneous tumors, inflammatory diseases, hemangiomas and vascular malformations, melanoma, nail tumors, scalp diseases and cosmetic conditions; shows common simulators of cutaneous diseases; and discusses protocols for assessing common dermatologic conditions. Inclusion of clinical overviews, tips, and pitfalls enables a better understanding of the pathologies of the disorders and the methodological approach in assessing these entities.

Marine Mycology Jan 03 2020 Marine Mycology: The Higher Fungi deals with the higher marine fungi, i.e., Ascomycotina, Basidiomycotina, and Deuteromycotina. This book combines features of a monograph with those of a text. It includes sections on ecological groups of fungi and other topics, such as phylogeny, ontogeny, physiology, and vertical and geographical distribution, providing information on known facts and open questions. The taxonomic-descriptive part contains complete descriptions of each genus and species, together with substrates, range, etymology of generic and specific names, and literature. There are keys for all species within a given genus, and a general illustrated key leads to the individual species. The taxonomic section is based on examinations of almost all of the filamentous marine fungi, and unpublished data on new hosts and geographical distributions are included for many species. The filamentous higher marine fungi are represented by 149 Ascomycetes, 4 Basidiomycetes, and 56 Deuteromycetes. The majority, namely 191 (91%) of the filamentous fungi, are obligately marine species, whereas the remainder are facultatively marine. One new species and seven new combinations are proposed. The yeasts are treated in a separate chapter and comprise 177 species or varieties.

Digital Mammography Aug 29 2019 Digital Radiography has been firmly established in diagnostic radiology during the last decade. Because of the special requirements of high contrast and spatial resolution needed for roentgen mammography, it took some more time to develop digital mammography as a routine radiological tool. Recent technological progress in detector and screen design as well as increased experience with computer applications for image processing have now enabled Digital Mammography to become a mature modality that opens new perspectives for the diagnosis of breast diseases. The editors of this timely new volume Prof. Dr. U. Bick and Dr. F. Diekmann, both well-known international leaders in breast imaging, have for many years been very active in the frontiers of theoretical and translational clinical research, needed to bring digital

mammography naturally into the sphere of daily clinical radiology. I am very much indebted to the editors as well as to the other internationally recognized experts in the field for their outstanding state of the art contributions to this volume. It is indeed an excellent handbook that covers in depth all aspects of Digital Mammography and thus further enriches our book series Medical Radiology. The highly informative text as well as the numerous well-chosen superb illustrations will enable certified radiologists as well as radiologists in training to deepen their knowledge in modern breast imaging.

Searching for Dark Matter with the ATLAS Detector Feb 02 2020 This thesis describes the search for Dark Matter at the LHC in the mono-jet plus missing transverse momentum final state, using the full dataset recorded in 2012 by the ATLAS Experiment. It is the first time that the number of jets is not explicitly restricted to one or two, thus increasing the sensitivity to new signals. Instead, a balance between the most energetic jet and the missing transverse momentum is required, thus selecting mono-jet-like final states. Collider searches for Dark Matter have typically used signal models employing effective field theories (EFTs), even when comparing to results from direct and indirect detection experiments, where the difference in energy scale renders many such comparisons invalid. The thesis features the first robust and comprehensive treatment of the validity of EFTs in collider searches, and provides a means by which the different classifications of Dark Matter experiments can be compared on a sound and fair basis.

The Flat-Footed Flies Dec 02 2019 "The Flat-footed Flies (Diptera: Opetiidae and Platypezidae) of Europe" presents a detailed account of the taxonomy, biology and distribution of the 44 European species of Opetiidae and Platypezidae. Two of these are here described as new to science. Known larvae develop in the larger fungi; adults are honey-dew feeders on broad leaves. Both families are characterised and proposals on their relationships and phylogeny are discussed. All European species are keyed and described in detail. Adult and larval biology are reviewed. The provincial distribution of 35 species occurring in Fennoscandia and Denmark is listed in a detailed catalogue. The work presents identification keys to genera and species and for each species descriptions and accounts of its nomenclature, biology and distribution. Known early stages are keyed to genera and described under each species. Altogether 427 line drawings and 6 beautiful colour illustrations accompany the text.
