Child Poverty and Deprivation in the Industrialized Countries, 1945-1995 Apr 14 2021 The authors in this volume utilize a common analytical framework to evaluate how economic, family structure, and public policy changes affected the well-being of children in the industrialized countries in the West and the East from the end of the Second World War to the mid-1990s. Throughout the industrialized world, the living standards and social well-being of children improved remarkably over these five decades. But the quarter-century 'golden age' that followed the Second World War gave way to a period of stagnation after the early 1970s. Many of the negative developments of the past two decades could not have been easily prevented because of the profound structural changes that have affected all industrialised economies and the profound political changes that have affected the former Soviet Bloc. Nonetheless, adverse or neglectful social policies share some of the blame for the recent unfavourable

changes in child well-being. The evidence presented suggests that, given current economic prospects and family structures, further weakening of social policies targeted at children could erode much of the progress of the past fifty years.

Environmental policy tools : a user's guide. Oct 21 2021 The search for 'smarter' ways to prevent or control pollution has generated heated debate on almost every conceivable topic related to setting goals, improving institutional arrangements, and choosing the most effective means for achieving those goals. This last issue choosing the means or policy instruments to meet environmental goals can be a surprisingly complex task for decision makers, given the need to balance other competing concerns. The environmental policy toolbox contains many and varied instruments but lacks a clear set of instructions for their use. This OTA report fills that need. The 'guide' is organized into three major sections: (1) The Environmental Policy Toolbox: a discussion of 12 major policy tools, their frequency of use, and key strengths and weaknesses. (2) The Criteria for Comparing Tools: our evaluation of how effective these instruments are in achieving the values and interests or criteria decision makers are likely to weigh. (3) Choosing Tools: a series of questions for matching a tool or tools to a specific problem. Choosing tools that satisfy several, much less all, of these criteria for a specific problem is the challenge. Unfortunately, no perfect policy tool exists to meet everyone's expectations for every problem.

**A User's Guide to Measure Theoretic Probability** Jul 26 2019 This book grew from a one-semester course offered for many years to a mixed audience of graduate and undergraduate students who have not had the luxury of taking a course in measure theory. The core of the book covers the basic topics of independence, conditioning, martingales, convergence in distribution, and Fourier transforms. In addition there are numerous sections treating topics traditionally thought of as more advanced, such as coupling and the KMT strong approximation, option pricing via the equivalent martingale measure, and the isoperimetric inequality for Gaussian processes. The book is not just a presentation of mathematical theory, but is also a discussion of why that theory takes its current form. It will be a secure starting point for anyone who needs to invoke rigorous probabilistic arguments and understand what they mean.
