Small-Scale Public Transportable and Pre-Fabricated Buildings Dec 31 2019 This book investigates the design, operation and use of contemporary transportable buildings, and explores how functional performance can be assessed in small-scale examples for public use alongside their relationship to other design elements. The research focuses on three case studies, Chengdu Hualin Elementary School, Exxopolis and Kreod, that do not require a high-technology building environment or complex construction skills. Transportable buildings are defined as those that are transported

in a number of parts for assembly on site. Contemporary transportable buildings respond to ecological issues, social impacts, technological innovation and economic demands. They can be used to measure a society's development in environmental sustainability, innovation and economic growth through various forms. Small-scale transportable buildings fulfil many temporary habitation needs in diverse roles, such as non-emergency transitional housing, ephemeral exhibition buildings and seasonal entertainment facilities. *Small-Scale Public Transportable and Pre-Fabricated Buildings* will be a useful research text for academics and students in architecture, design and sustainable building performance.

Instruction Manual for Swallowing Nov 02 2022 ***WINNER of the 2011 Arts Foundation Fellowship in Short Story Writing*** **Short-Listed for the 2010 Sunday Times EFG Private Bank Short Story Award** *Long-listed for the Frank O'Connor International Short Story Prize* Robotic insects, in-growing cutlery, flesh-serving waiters in a zombie cafe... Welcome to the surreal, misshapen universe of Adam Marek's first collection; a bestiary of hybrids from the techno-crazed future and mythical past; a users' guide to the seemingly obvious (and the world of illogic implicit within it). Whether fantastical or everyday in setting, Marek's stories lead us down to the engine room just beneath modern consciousness, a place of both atavism and familiarity, where the body is fluid, the spirit mechanised, and beasts often tell us more about our humanity than anything we can teach ourselves.

User Localization Strategies in the Face of Technological Breakdown May 16 2021 This book examines Ghana's use of the fingerprint biometric technology in order to further conversations about localization championed by technical communication scholars. Localization, in this case, refers to the extent to which users demonstrate their knowledge of use by subverting and reconfiguring the purpose of technology to solve local problems. Dorpenyo argues that the success of a technology depends on how it meets the users' needs and the creative efforts users put into use situations. In *User Localization Strategies in the Face of Technological Breakdown*, Dorpenyo advocates studying how users of technological systems construct knowledge about the technology and develop local strategies to solve technological breakdowns. By analyzing technical documents and interview transcripts, the author identifies and advances three user localization strategies: linguistic localization, subversive localization, and user-heuristic experience localization, and considers how biometric systems can become a tool of marginalization.

The Gentlemen's Book of Etiquette and Manual of Politeness Jul 26 2019 This book provides rules for the etiquette to be observed in the street, at table, in the ball room, evening party, and morning call; with full directions for polite or responce, dress, conversation, manly exercises, and accomplishments. Man was not intended to live like a bear or a hermit, apart from others of his own nature, and, philosophy and reason will each agree with me, that man was born for sociability and finds his true delight in society. Society is a word capable of many meanings, and used here in each and all of them. Society, par excellence; the world at large; the little clique to which he is bound by early ties; the companionship of friends or relatives; even society tete a tete with one dear sympathizing soul, are pleasant states for a man to be in. All in all this is a great book on etiquette. A great place to learn the rules of etiquette.

Developing Statistical Software in Fortran 95 Jun 04 2020 Many books teach computational statistics. Until now, however, none has shown how to write a good program. This book gives

statisticians, biostatisticians and methodologically-oriented researchers the tools they need to develop high-quality statistical software. Topics include how to: Program in Fortran 95 using a pseudo object-oriented style Write accurate and efficient computational procedures Create console applications Build dynamic-link libraries (DLLs) and Windows-based software components Develop graphical user interfaces (GUIs) Through detailed examples, readers are shown how to call Fortran procedures from packages including Excel, SAS, SPSS, S-PLUS, R, and MATLAB. They are even given a tutorial on creating GUIs for Fortran computational code using Visual Basic.NET. This book is for those who want to learn how to create statistical applications quickly and effectively. Prior experience with a programming language such as Basic, Fortran or C is helpful but not required. More experienced programmers will learn new strategies to harness the power of modern Fortran and the object-oriented paradigm. This may serve as a supplementary text for a graduate course on statistical computing. From the reviews: "This book should be read by all statisticians, engineers, and scientists who want to implement an algorithm as a computer program. The book is the best introduction to programming that I have ever read. I value it as one of my important reference books in my personal library." Melvin J. Hinich for *Techometrics*, November 2006 "Overall, the book is well written and provides a reasonable introduction to the use of modern versions of Fortran for statistical computation. The real thrust of the book is building COM interfaces using Fortran, and it will no doubt be most useful to anyone who needs to build such interfaces." *Journal of the American Statistical Association*, June 2006 "The book is well written and is divided into chapters and sections which are coherent...Overall the book seems like a good resource for someone that already knows some dialect of FORTRAN and wants to learn a bit about what is new in FORTRAN 95..." Robert Gentleman for the *Journal of Statistical Software*, December 2006

The Sustainable City XI May 28 2022 Covering the proceedings of the 11th International Conference on Urban Regeneration and Sustainability held in Alicante, Spain, this volume addresses the multidisciplinary aspects of urban planning; a result of the increasing size of cities, the amount of resources and services required and the complexity of modern society. Most of the earth's population live in cities and the process of urbanisation still continues to generate problems originating from the drift of the population towards them. These problems can be resolved by cities becoming efficient

habitats, saving resources in a way that improves the standard of living. The process faces a number of challenges related to reducing pollution and improving main transportation and infrastructure systems. These challenges can contribute to the development of social and economic imbalances and require the development of new solutions. Large cities are probably the most complex mechanisms to manage, nevertheless they represent a productive ground for architects, engineers, city planners, and social and political scientists able to conceive new ideas and time them according to technological advances and human requirements. The Sustainable City XI follows a succession of very successful international conferences and covers the following fields: Urban planning and design; Urban development and management; Urban conservation and regeneration; The community and the city; Eco-town planning; Landscape planning and design; Environmental management; Sustainable energy and the city; Transportation Quality of life; Socio-economic and political considerations; Cultural quarters and interventions; Waterfront development; Case studies – sustainable practices; Architectural issues; Cultural heritage issues; Appropriate technologies for smart cities; Planning for resilience; Disaster and emergency response; Urban safety and security; Waste management; Urban infrastructure and Urban metabolism.

The Practicing Stoic Aug 31 2022 At the school of philosophy founded at Athens by Zeno of Citium the teachers believed that virtue, the highest good, is based on knowledge and reason, and encouraged indifference to the vicissitudes of fortune and to pleasure and pain. Farnsworth integrates his own observations with scores of quotations to provide perspective of the various Stoic philosophers. His organization and commentary makes the meaning and relevance of this ancient philosophy clear for our times.
