Use of Proxies in Paleoceanography Apr 30 2020 Paleoceanographic proxies provide information for reconstructions of the past, including climate changes, global and regional oceanography, and the cycles of biochemical components in the ocean. These proxies are measurable descriptors for desired but unobservable environmental variables such as temperature, salinity, primary productivity, nutrient content, or surface-water carbon dioxide concentrations. The proxies are employed in a manner analogous to oceanographic methods. The water masses are

first characterized according to their specific physical and chemical properties, and then related to particular assemblages of certain organisms or to particular element or isotope distributions. We have a long-standing series of proven proxies available. Marine microfossil assemblages, for instance, are employed to reconstruct surface-water temperatures. The calcareous shells of planktonic and benthic microorganisms contain a wealth of paleoceanographic information in their isotopic and elemental compositions. Stable oxygen isotope measurements are used to determine ice volume, and Mg/Ca ratios are related to water temperatures, to cite a few examples. Organic material may also provide valuable information, e. g. , about past productivity conditions. Studying the stable carbon isotope composition of bulk organic matter or individual marine organic components may provide a measure of past surface-water CO₂ conditions within the bounds of certain assumptions. Within the scope of paleoceanographic investigations, the existing proxies are continuously evolving and improving, while new proxies are being studied and developed. The methodology is improved by analysis of samples from the water column and surface sediments, and through laboratory experiments.

21st Century Research on Drugs and Ethnicity Oct 25 2019 Learn about the latest federally supported research on ethnicity and drug use The National Institute on Drug Abuse has supported professional research into variation among ethnic groups' use, abuse, and recovery from alcohol, tobacco, and other drugs, as well as research into perceptions of and readiness for treatment. *21st Century Research on Drugs and Ethnicity: Studies Supported by the National Institute on Drug Abuse* takes a detailed look at the research performed in the last three years to help provide evidence-based and culturally competent counseling and treatment for individuals suffering from substance abuse/addiction syndromes. Top researchers discuss crucial unique issues in ethnic group use of psychoactive substances. This valuable resource explores the studies to better enable treatment, counseling, and prevention personnel who work in treatment programs, community groups, and schools to provide effective evidence-based practices

tailored to the population they serve. 21st Century Research on Drugs and Ethnicity: Studies Supported by the National Institute on Drug Abuse presents prominent researchers such as J. Scott Tonigan, William Miller, and Mario de la Rosa who reveal and discuss the latest important data. This volume can be used by practitioners to increase the rates of individuals making healthy choices, or recovering from and sustaining recovery from abuse syndromes. The book also includes an introduction by Lula Beatty, PhD, Chief of the Special Populations Office at the National Institute on Drug Abuse. Topics discussed in 21st Century Research on Drugs and Ethnicity: Studies Supported by the National Institute on Drug Abuse include: a comparison of professional models of treatment readiness analysis of how client culture matches treatment culture Native American client response to modern treatment modalities research on current rates of drug use among racial/ethnic groups at colleges study into injecting drug use behaviors problems of treatment underutilization by Latinos/Latinas and much more! 21st Century Research on Drugs and Ethnicity: Studies Supported by the National Institute on Drug Abuse is a valuable resource for human service workers, psychologists, social workers, addictions researchers, educators, trainers, treatment personnel, and graduate students in counseling, social work, health, and addictions.

Eminent Domain Use and Abuse Oct 17 2021 This book is a comprehensive analysis of the U.S. Supreme Court decision in *Kelo v. City of New London*. It addresses the controversial and important question of when eminent domain may constitutionally be used to take property for projects that are not publicly owned and operated facilities, such as schools and town halls. The volume captures and conveys the context within which this debate is taking place as well as offers guidance concerning the *Kelo* decision itself and how it may be used.

Basic Legal Research for Criminal Justice and the Social Sciences Aug 23 2019 This essential primer on legal research is written specifically for criminal justice and social sciences students. The book's basic, how-to approach makes it suitable not only as a guiding text for research courses, but also as a key supplementary text for courses in which legal research is a secondary requirement. Stripped of the cumbersome information found in similar texts for legal students, this slim essentials book gives criminal justice and social sciences students the tools they need for successful research.
Land Use, Nature Conservation and the Stability of Rainforest Margins in Southeast Asia Sep 28 2022 Southeast Asia constitutes one of the world's most extended rainforest regions. It is characterized by a high degree of biodiversity and contains a large variety of endemic species. Moreover, these forests provide a number of important and singular ecosystem services, like erosion protection and provision of high quality water, which cannot be replaced by alternative ecosystems. However, various forms of encroachment, mostly those made by human interventions, seriously threaten the continuance of rainforests in this area. There is ample evidence that the rainforest resources, apart from large scale commercial logging, are exposed to danger particularly from its margin areas. These areas, which are characterized by intensive man-nature interaction, have been identified as extremely fragile systems. The dynamic equilibrium that balances human needs and interventions on the one hand, and natural regeneration capacity on the other, is at stake. The decrease of rainforest resources is, to a substantial degree, connected with the destabilization of these systems. Accordingly, the search for measures and processes, which prevent destabilization and promote stability is regarded as imperative. This refers to both the human and the natural part of the forest margin ecosystem.

Sustainable Land Use and Rural Development in Southeast Asia:

Innovations and Policies for Mountainous Areas Jun 13 2021 This book is based on the findings of a long-term (2000-2014) interdisciplinary research project of the University of Hohenheim in collaboration with several universities in Thailand and Vietnam. Titled *Sustainable Land Use and Rural Development in Mountainous Areas in Southeast Asia*, or the Uplands Program, the project aims to contribute through agricultural research to the conservation of natural resources and the improvement of living conditions of the rural population in the mountainous regions of Southeast Asia. Having three objectives the book first aims to give an interdisciplinary account of the drivers, consequences and challenges of ongoing changes in mountainous areas of Southeast Asia. Second, the book describes how innovation processes can contribute to addressing these challenges and third, how knowledge creation to support change in policies and institutions can assist in sustainably develop mountain areas and people's livelihoods.

The Code of Federal Regulations of the United States of America Nov 06 2020 The Code of Federal Regulations is the codification of the general and permanent rules published in the Federal Register by the executive departments and agencies of the Federal Government.
