**Analytical Chemistry** Feb 19 2022 An essential guide to inquiry approach instrumental analysis Analytical Chemistry offers an essential guide to inquiry approach instrumental analysis collection. The book focuses on more in-depth coverage and information about an inquiry approach. This authoritative guide reviews the basic principles and techniques. Topics covered include: method of standard; the microscopic view of electrochemistry; calculating cell potentials; the BerriLambert; atomic and molecular absorption processes; vibrational modes; mass spectra interpretation; and much more.

**Mentoring Science Teachers in the Secondary School** Aug 21 2019 This practical guide helps mentors of new science teachers in both developing their own mentoring skills and providing the essential guidance their trainees need as they navigate the rollercoaster of the first years in the classroom. Offering tried-and-tested strategies based on the best research, it covers the knowledge, skills and understanding every mentor needs and offers practical tools such as lesson plans and feedback guides, observation sheets and examples of dialogue with trainees. Together with analytical tools for self-evaluation, this book is a vital source of support and inspiration for all those involved in developing the next generation of outstanding science teachers. Key topics explained include: • Roles and responsibilities of mentors • Developing a mentor-mentee relationship • Guiding beginning science teachers through the lesson planning, teaching and self-evaluation processes • Observations and pre- and post-lesson discussions and regular mentoring meetings • Supporting beginning teachers to enhance scientific knowledge and effective pedagogical practices • Building confidence among beginning teachers to cope with pupils' contingent questions and assess scientific knowledge and skills • Supporting beginning teachers' planning and teaching to enhance scientific literacy and inquiry among pupils • Developing autonomous science teachers with an attitude to promote the learning of science for all the learners Filled with tried-and-tested strategies based on the latest research, *Mentoring Science Teachers in the Secondary School* is a vital guide for mentors of science teachers, both trainee and newly qualified, with ready-to-use strategies that support and inspire both mentors and beginning teachers alike.

**Learner-Centered Teaching** Sep 02 2020 Praise for Maryellen Weimer's *Inspired College Teaching* "The thoughtfulness, personalization, and consideration Maryellen Weimer demonstrates in discussing the experience of faculty members, her ability to identify issues that are shared and solvable, and her suggestions and solutions to commonly experienced stressors and difficulties in college teaching are major strengths of this volume. . . . In a way, it is a 'workshop between book covers'-or perhaps several workshops!" -Laura L. B. Border, director, Graduate Teacher Program and Collaborative Preparing Future Faculty Network, University of Colorado at Boulder "A book by Maryellen Weimer always displays her wonderful grasp of the literature on college teaching and learning, her ability to tell good stories, and her wit and wisdom. This one is no exception." -Nancy Van Note Chism, professor, Indiana University School of Education, Indiana University-Purdue University Indianapolis Praise for *Enhancing Scholarly Work on Teaching and Learning* "In her characteristically research-based, direct, and practical style, Maryellen Weimer provides a much-needed guide, critique, and road map of the scholarship of teaching and learning. Weimer's new book will be of use to teachers, researchers, and administrators alike and nicely complements her *Learner-Centered Teaching and Classroom Research*, by Cross and Steadman." -Thomas A. Angelo, director, University Teaching Development Centre, Victoria University of Wellington, New Zealand "Yet again, Maryellen Weimer has made a perfectly timed contribution to the pursuit of excellence in teaching and learning. *Enhancing Scholarly Work on Teaching and Learning* does indeed shed clarifying light on the exciting new emphasis on scholarly approaches to teaching. In her distinctively conversational and clear style, Dr. Weimer maps out the nature of pedagogical literature-how to read it and how to contribute to it. . . . This book is the perfect next step in the journey to understand the benefits of scholarly teaching." -Gary Poole, director, Centre for Teaching and Academic Growth; founding director, Institute for the Scholarship of Teaching and Learning, University of British Columbia

**Flipped Learning** Apr 28 2020 Flipped learning is an approach to the design and instruction of classes through which, with appropriate guidance, students gain their first exposure to new concepts and material prior to class, thus freeing up time during class for the activities where students typically need the most help, such as applications of the basic material and engaging in deeper discussions and creative work with it. While flipped learning has generated a great deal of excitement, given the evidence demonstrating its potential to transform students' learning, engagement and metacognitive skills, there has up to now been no comprehensive guide to using this teaching approach in higher education. Robert Talbert, who has close to a decade's experience using flipped learning for majors in his discipline, in general education courses, in large and small sections, as well as online courses - and is a frequent workshop presenter and speaker on the topic - offers faculty a practical, step-by-step, "how-to" to this powerful teaching method. He addresses readers who want to explore this approach to teaching, those who have recently embarked on it, as well as experienced practitioners, balancing an account of research on flipped learning and its theoretical bases, with course design concepts to guide them set up courses to use flipped learning effectively, tips and case studies of actual classes across various disciplines, and practical considerations such as obtaining buy-in from students, and getting students to do the pre-class activities. This book is for anyone seeking ways to get students to better learn the content of their course, take more responsibility for their work, become more self-regulated as learners, work harder and smarter during class time, and engage positively with course material. As a teaching method, flipped learning becomes demonstrably more powerful when adopted across departments. It is an idea that offers the promise of transforming teaching in higher education.

**Process Oriented Guided Inquiry Learning (POGIL)** Jun 23 2022 The volume begins with an overview of POGIL and a discussion of the science education reform context in which it was developed. Next, cognitive models that serve as the basis for POGIL are presented, including Johnstone's Information Processing Model and a novel extension of it. Adoption, facilitation and implementation of POGIL are addressed next. Faculty who have made the transformation from a traditional approach to a POGIL student-centered approach discuss their motivations and implementation processes. Issues related to implementing POGIL in large classes are discussed and possible solutions are provided. Behaviors of a quality facilitator are presented and steps to create a facilitation plan are outlined. Succeeding chapters describe how POGIL has been successfully implemented in diverse academic settings, including high school and college classrooms, with both science and non-science majors. The challenges for implementation of POGIL are presented, classroom practice is described, and topic selection is addressed. Successful POGIL instruction can incorporate a variety of instructional techniques. Tablet PC's have been used in a POGIL classroom to allow extensive communication between students and instructor. In a POGIL laboratory section, students work in groups to carry out experiments rather than merely verifying previously taught principles. Instructors need to know if students are benefiting from POGIL practices. In the final chapters, assessment of student performance is discussed. The concept of a feedback loop, which can consist of self-analysis, student and peer assessments, and input from other instructors, and its importance in assessment is detailed. Data is provided on POGIL instruction in organic and general chemistry courses at several institutions. POGIL is shown to reduce attrition, improve student learning, and enhance process skills.

**Argumentation in Chemistry Education** Sep 26 2022 Scientists use arguments to relate the evidence that they select from their investigations and to justify the claims that they make about their observations. This book brings together leading researchers to draw attention to research, policy and practice around the inclusion of argumentation in chemistry education.

**7th International Conference on University Learning and Teaching (InCULT 2014) Proceedings** Oct 15 2021 The book comprises papers presented at the 7th International Conference on University Learning and Teaching (InCULT) 2014, which was hosted by the Asian Centre for Research on University Learning and Teaching (ACRULeT) located at the Faculty of Education, Universiti Teknologi MARA, Shah Alam, Malaysia. It was co-hosted by the University of Hertfordshire, UK; the University of South Australia; the University of Ohio, USA; Taylor's University, Malaysia and the Training Academy for Higher Education (AKEPT), Ministry of Education, Malaysia. A total of 165 papers were presented by speakers from around the world based on the theme "Educate to Innovate in the 21st Century." The papers in this timely book cover the latest developments, issues and concerns in the field of teaching and learning and provide a valuable reference resource on university teaching and learning for lecturers, educators, researchers and policy makers.

**Culturally Responsive Strategies for Reforming STEM Higher Education** Dec 17 2021 This book chronicles the introspective and contemplative strategies employed within a uniquely-designed professional development intervention that successfully increased the self-efficacy of STEM faculty in implementing culturally relevant pedagogies in the computer/information sciences.

**Structures and Architecture - Bridging the Gap and Crossing Borders** Mar 28 2020 Structures and Architecture - Bridging the Gap and Crossing Borders contains the lectures and papers presented at the Fourth International Conference on Structures and Architecture (ICSA2019) that was held in Lisbon, Portugal, in July 2019. It also contains a multimedia device with the full texts of the lectures presented at the conference, including the 5 keynote lectures, and almost 150 selected contributions. The contributions on creative and scientific aspects in the conception and construction of structures, on advanced technologies and on complex architectural and structural applications represent a fine blend of scientific, technical and practical novelties in both fields. ICSA2019 covered all major aspects of structures and architecture, including: building envelopes/façades; comprehension of complex forms;

computer and experimental methods; futuristic structures; concrete and masonry structures; educating architects and structural engineers; emerging technologies; glass structures; innovative architectural and structural design; lightweight and membrane structures; special structures; steel and composite structures; structural design challenges; tall buildings; the borderline between architecture and structural engineering; the history of the relationship between architects and structural engineers; the tectonic of architectural solutions; the use of new materials; timber structures, among others. This set of book and multimedia device is intended for a global readership of researchers and practitioners, including architects, structural and construction engineers, builders and building consultants, constructors, material suppliers and product manufacturers, and other professionals involved in the design and realization of architectural, structural and infrastructural projects.

**Chemists' Guide to Effective Teaching** May 22 2022 Intended for anyone who teaches chemistry, this book examines applications of learning theories—presenting actual techniques and practices that respected professors have used to implement and achieve their goals. Introduction: Chemistry and Chemical Education; Exploring the Impact of Teaching Styles on Student Learning in Both Traditional and Innovative Classes; Guided Inquiry and the Learning Cycle; Teaching to Achieve Conceptual Change; Transforming Lecture Halls with Cooperative Learning; Using Visualization Techniques in Chemistry Teaching; POGIL: Process-Oriented Guided-Inquiry Learning; Peer-Led Team Learning: Scientific Learning and Discovery; Peer-Led Team Learning: Organic Chemistry; Practical Issues on the Development, Implementation, and Assessment of a Fully Integrated Laboratory-Lecture Teaching Environment; Model-Observe-Reflect-Explain (MORE) Thinking Frame Instruction: Promoting Reflective Laboratory Experiences to Improve Understanding of Chemistry; Technology Based Inquiry Oriented Activities for Large Lecture Environments; Using Visualization Technology and Group Activities in Large Chemistry Courses; Computer Animations of Chemical Processes at the Molecular Level; Symbolic Mathematics in the Chemistry Curriculum: Facilitating the Understanding of Mathematical Models used in Chemistry; Chemistry Is in the News: They Why and Wherefore of Integrating Popular News Media into the Chemistry Classroom; Chemistry at a Science Museum; The Journal of Chemical Education Digital Library: Enhancing Learning with Online Resources. A useful reference for chemistry educators.

**How Colleges Change** Oct 23 2019 Higher education is in an unprecedented time of change and reform. To address these challenges, university leaders tend to focus on specific interventions and programs, but ignore the change processes and the contexts that would lead to success. Joining theory and practice, *How Colleges Change* unmask problematic assumptions that change agents typically possess and provides research-based principles for approaching change. Framed by decades of research, this monumental book offers fresh insights into understanding, leading, and enacting change. Recognizing that internal and external conditions shape and frame change processes, Kezar presents an overarching practical framework that can be applied to any organizational challenge and context. *How Colleges Change* is a crucial resource for aspiring and practicing campus leaders, higher education practitioners, scholars, faculty, and staff who want to learn how to apply change strategies in their own institutions.

Chemistry Education in the ICT Age May 10 2021 The 20 International Conference on Chemical Education (20 ICCE), which had "Chemistry in the ICT Age" as the theme, was held from 3 to 8 August 2008 at Le Méridien Hotel, Pointe aux Piments, in Mauritius. With more than 200 participants from 40 countries, the conference featured 140 oral and 50 poster presentations. Participants of the 20 ICCE were invited to submit full papers and the latter were subjected to peer review. The selected accepted papers are collected in this book of proceedings. This book of proceedings encloses 39 presentations covering topics ranging from fundamental to applied chemistry, such as Arts and Chemistry Education, Biochemistry and Biotechnology, Chemical Education for Development, Chemistry at Secondary Level, Chemistry at Tertiary Level, Chemistry Teacher Education, Chemistry and Society, Chemistry Olympiad, Context Oriented Chemistry, ICT and Chemistry Education, Green Chemistry, Micro Scale Chemistry, Modern Technologies in Chemistry Education, Network for Chemistry and Chemical Engineering Education, Public Understanding of Chemistry, Research in Chemistry Education and Science Education at Elementary Level. We would like to thank those who submitted the full papers and the reviewers for their timely help in assessing the papers for publication. We would also like to pay a special tribute to all the sponsors of the 20 ICCE and, in particular, the Tertiary Education Commission (<http://tec.intnet.mu/>) and the Organisation for the Prohibition of Chemical Weapons (<http://www.opcw.org/>) for kindly agreeing to fund the publication of these proceedings.

POGIL Oct 27 2022 Process Oriented Guided Inquiry Learning (POGIL) is a pedagogy that is based on research on how people learn and has been shown to lead to better student outcomes in many contexts and in a variety of academic disciplines. Beyond facilitating students' mastery of a discipline, it promotes vital educational outcomes such as communication skills and critical thinking. Its active international community of practitioners provides accessible educational development and support for anyone developing related courses. Having started as a process developed by a group of chemistry professors focused on helping their students better grasp the concepts of general chemistry, The POGIL Project has grown into a dynamic organization of committed instructors who help each other transform classrooms and improve student success, develop curricular materials to assist this process, conduct research expanding what is known about learning and teaching, and provide professional development and collegiality from elementary teachers to college professors. As a pedagogy it has been shown to be effective in a variety of content areas and at different educational levels. This is an introduction to the process and the community. Every POGIL classroom is different and is a reflection of the uniqueness of the particular context - the institution, department, physical space, student body, and instructor - but follows a common structure in

which students work cooperatively in self-managed small groups of three or four. The group work is focused on activities that are carefully designed and scaffolded to enable students to develop important concepts or to deepen and refine their understanding of those ideas or concepts for themselves, based entirely on data provided in class, not on prior reading of the textbook or other introduction to the topic. The learning environment is structured to support the development of process skills -- such as teamwork, effective communication, information processing, problem solving, and critical thinking. The instructor's role is to facilitate the development of student concepts and process skills, not to simply deliver content to the students. The first part of this book introduces the theoretical and philosophical foundations of POGIL pedagogy and summarizes the literature demonstrating its efficacy. The second part of the book focusses on implementing POGIL, covering the formation and effective management of student teams, offering guidance on the selection and writing of POGIL activities, as well as on facilitation, teaching large classes, and assessment. The book concludes with examples of implementation in STEM and non-STEM disciplines as well as guidance on how to get started. Appendices provide additional resources and information about The POGIL Project.

**Organic Chemistry: Guided Inquiry for Recitation, Volume 2** Apr 21 2022 Add the power of guided inquiry to your course without giving up lecture with ORGANIC CHEMISTRY: A GUIDED INQUIRY FOR RECITATION, Volume II. Slim and affordable, the book covers key Organic 2 topics using POGIL (Process Oriented Guided Inquiry Learning), a proven teaching method that increases learning in organic chemistry. Containing everything you need to energize your teaching assistants and students during supplemental sessions, the workbook builds critical thinking skills and includes once-a-week, student-friendly activities that are designed for supplemental sessions, but can also be used in lab, for homework, or as the basis for a hybrid POGIL-lecture approach. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

**Introductory Chemistry** Jul 12 2021 The ChemActivities found in Introductory Chemistry: A Guided Inquiry use the classroom guided inquiry approach and provide an excellent accompaniment to any one semester Introductory text. Designed to support Process Oriented Guided Inquiry Learning (POGIL), these materials provide a variety of ways to promote a student-focused, active classroom that range from cooperative learning to active student participation in a more traditional setting.

**Advances in Teaching Physical Chemistry** Aug 01 2020 This book brings together the latest perspectives and ideas on teaching modern physical chemistry. It includes perspectives from experienced and well-known physical chemists, a thorough review of the education literature pertaining to physical chemistry, a thorough review of advances in undergraduate laboratory experiments from the past decade, in-depth descriptions of using computers to aid student learning, and innovative ideas for teaching the fundamentals of physical chemistry. This book will provide valuable insight and information to all teachers of physical chemistry.

**Exploring More Signature Pedagogies** Nov 23 2019 What is distinctive about the ways specific disciplines are traditionally taught, and what kinds of learning do they promote? Do they inspire the habits of the discipline itself, or do they inadvertently contradict or ignore those disciplines? By analyzing assumptions about often unexamined teaching practices, their history, and relevance in contemporary learning contexts, this book offers teachers a fresh way to both think about their impact on students and explore more effective ways to engage students in authentic habits and practices. This companion volume to Exploring Signature Pedagogies covers disciplines not addressed in the earlier volume and further expands the scope of inquiry by interrogating the teaching methods in interdisciplinary fields and a number of professions, critically returning to Lee S. Shulman's origins of the concept of signature pedagogies. This volume also differs from the first by including authors from across the United States, as well as Ireland and Australia. The first section examines the signature pedagogies in the humanities and fine arts fields of philosophy, foreign language instruction, communication, art and design, and arts entrepreneurship. The second section describes signature pedagogies in the social and natural sciences: political science, economics, and chemistry. Section three highlights the interdisciplinary fields of Ignatian pedagogy, women's studies, and disability studies; and the book concludes with four chapters on professional pedagogies - nursing, occupational therapy, social work, and teacher education - that illustrate how these pedagogies change as the social context changes, as their knowledge base expands, or as online delivery of instruction increases.

**Issues in Education by Subject, Profession, and Vocation: 2011 Edition** Apr 09 2021 Issues in Education by Subject, Profession, and Vocation: 2011 Edition is a ScholarlyEditions™ eBook that delivers timely, authoritative, and comprehensive information about Education by Subject, Profession, and Vocation. The editors have built Issues in Education by Subject, Profession, and Vocation: 2011 Edition on the vast information databases of ScholarlyNews.™ You can expect the information about Education by Subject, Profession, and Vocation in this eBook to be deeper than what you can access anywhere else, as well as consistently reliable, authoritative, informed, and relevant. The content of Issues in Education by Subject, Profession, and Vocation: 2011 Edition has been produced by the world's leading scientists, engineers, analysts, research institutions, and companies. All of the content is from peer-reviewed sources, and all of it is written, assembled, and edited by the editors at ScholarlyEditions™ and available exclusively from us. **Reigniting Curiosity and Inquiry in Higher Education** Dec 25 2019 How do you develop students' capacities as independent learners, build their confidence and motivation to identify their own research agendas, and facilitate their critical thinking and research skills for effectively exploring their chosen topic? Inquiry-based learning (IBL) offers a proven means to achieve these outcomes. IBL is a scaffolded learner-

centered, student-led approach to inquiry whereby students progressively design and lead their own inquiry process, with support from the instructor. It's a powerful pedagogical approach that you can progressively adopt, first adopting it as an activity in a course to develop you and your students' comfort with the practice, right up to developing an entire course or program utilizing IBL. It offers varying levels of engagement as you and your students gain familiarity with the practice, from the instructor providing structured support, to formative guidance as students gain confidence, to a point where students become increasingly self-directed and independent and are supported by the review of student peers and validated by presentations of their work to the class. This pedagogy shifts the student/instructor relationship, with the former leading and the latter supporting. IBL is a flexible teaching and learning approach that can be progressively adopted and developed without a specific formula, and that positions students as co-constructors of knowledge, rather than passive recipients. It is student-driven, creates engagement, develops a curiosity mindset, promotes group learning that is collaborative rather than competitive, fosters metacognition, and builds confidence as students learn to deal with ambiguity and risk. Each chapter offers personal stories, vignettes, examples of practice, and discussions of issues. This book offers higher education instructors at any career stage and in any discipline, a realistic guide to incorporating curiosity and inquiry-based learning into their classrooms to promote long term knowledge creation and retention and life-wide learning. IBL is being increasingly adopted across the English-speaking world. Beyond its inherent capacity to promote independent learning, it offers a perfect foundation for preparing students for Signature Work and capstone courses; and is adaptable to small and large classes.

**Making Chemistry Relevant** Oct 03 2020 Unique new approaches for making chemistry accessible to diverse students Students' interest and achievement in academics improve dramatically when they make connections between what they are learning and the potential uses of that knowledge in the workplace and/or in the world at large. Making Chemistry Relevant presents a unique collection of strategies that have been used successfully in chemistry classrooms to create a learner-sensitive environment that enhances academic achievement and social competence of students. Rejecting rote memorization, the book proposes a cognitive constructivist philosophy that casts the teacher as a facilitator helping students to construct solutions to problems. Written by chemistry professors and research groups from a wide variety of colleges and universities, the book offers a number of creative ways to make chemistry relevant to the student, including: Teaching science in the context of major life issues and STEM professions Relating chemistry to current events such as global warming, pollution, and terrorism Integrating science research into the undergraduate laboratory curriculum Enriching the learning experience for students with a variety of learning styles as well as accommodating the visually challenged students Using media, hypermedia, games, and puzzles in the teaching of chemistry Both novice and experienced faculty alike will find valuable ideas ready to be applied and adapted to enhance the learning experience of all their students.

**P'ungsu** Nov 16 2021 The first scholarly book to address Korean geomancy through an interdisciplinary lens. This book is a milestone in the history of academic research on the development and role of geomancy (fengshui in Chinese and p'ungsu in Korean) in Korean culture and society. As the first interdisciplinary work of its kind, it investigates many topics in geomancy studies that have never been previously explored, and contains contributions from a number of disciplines including geography, historical studies, environmental science, architecture, landscape architecture, religious studies, and psychoanalysis. While almost all books in English about geomancy are addressed to general readers as practical guides for divining auspicious locations, P'ungsu is a work of rigorous scholarship that documents, analyzes, and explains past and current practices of geomancy. Its readers will better understand the impact of geomancy on the Korean cultural landscape and appreciate the significant ecological principles embedded in the geomantic traditions of Korea; while researchers will discover new insights and inspirations for future research on geomancy not only in Korea, but in China and elsewhere.

**Advances in Computing and Communications, Part III** Feb 07 2021 This volume is the third part of a four-volume set (CCIS 190, CCIS 191, CCIS 192, CCIS 193), which constitutes the refereed proceedings of the First International Conference on Computing and Communications, ACC 2011, held in Kochi, India, in July 2011. The 70 revised full papers presented in this volume were carefully reviewed and selected from a large number of submissions. The papers are organized in topical sections on security, trust and privacy; sensor networks; signal and image processing; soft computing techniques; system software; vehicular communications networks.

**A Concise Guide to Improving Student Learning** Mar 08 2021 This concise guidebook is intended for faculty who are interested in engaging their students and developing deep and lasting learning, but do not have the time to immerse themselves in the scholarship of teaching and learning. Acknowledging the growing body of peer-reviewed literature on practices that can dramatically impact teaching, this intentionally brief book: \* Summarizes recent research on six of the most compelling principles in learning and teaching \* Describes their application to the college classroom \* Presents teaching strategies that are based on pragmatic practices \* Provides annotated bibliographies and important citations for faculty who want to explore these topics further This guidebook begins with an overview of how we learn, covering such topics such as the distinction between expert and novice learners, memory, prior learning, and metacognition. The body of the book is divided into three main sections each of which includes teaching principles, applications, and related strategies - most of which can be implemented without extensive preparation. The applications sections present examples of practice across a diverse range of disciplines including the sciences, humanities, arts, and pre-professional programs. This book provides a foundation for the reader explore these approaches and methods in his or her teaching.

**Mobility for Smart Cities and Regional Development - Challenges for Higher Education** Aug 25 2022 This book presents recent research on interactive collaborative learning. We are currently witnessing a significant transformation in the development of education and especially post-secondary education. To face these challenges, higher education has to find innovative ways to quickly respond to these new needs. On the one hand, there is a pressure by the new situation in regard to the COVID pandemic. On the other hand, the methods and organizational forms of teaching and learning at higher educational institutions have changed rapidly in recent months. Scientifically based statements as well as excellent experiences (best practice) are absolutely necessary. These were the aims connected with the 24th International Conference on Interactive Collaborative Learning (ICL2021), which was held online by Technische Universität Dresden, Germany, on 22-24 September 2021. Since its beginning in 1998, this conference is devoted to new approaches in learning with a focus on collaborative learning in Higher Education. Nowadays, the ICL conferences are a forum of the exchange of relevant trends and research results as well as the presentation of practical experiences in Learning and Engineering Pedagogy. In this way, we try to bridge the gap between "pure" scientific research and the everyday work of educators. This book contains papers in the fields of Teaching Best Practices Research in Engineering Pedagogy Engineering Pedagogy Education Entrepreneurship in Engineering Education Project-Based Learning Virtual and Augmented Learning Immersive Learning in Healthcare and Medical Education. Interested readership includes policymakers, academics, educators, researchers in pedagogy and learning theory, schoolteachers, learning industry, further and continuing education lecturers, etc.

Drawdown Sep 21 2019 NEW YORK TIMES BESTSELLER For the first time ever, an international coalition of leading researchers, scientists and policymakers has come together to offer a set of realistic and bold solutions to climate change. All of the techniques described here - some well-known, some you may have never heard of - are economically viable, and communities throughout the world are already enacting them. From revolutionizing how we produce and consume food to educating girls in lower-income countries, these are all solutions which, if deployed collectively on a global scale over the next thirty years, could not just slow the earth's warming, but reach drawdown: the point when greenhouse gasses in the atmosphere peak and begin to decline. So what are we waiting for?

*Computer Supported Education* Mar 20 2022 This book constitutes selected, revised and extended papers from the 13th International Conference on Computer Supported Education, CSEDU 2021, held as a virtual event in April 2021. The 27 revised full papers were carefully reviewed and selected from 143 submissions. They were organized in topical sections as follows: artificial intelligence in education; information technologies supporting learning; learning/teaching methodologies and assessment; social context and learning environments; ubiquitous learning; current topics.

*General, Organic, and Biological Chemistry* May 30 2020 Classroom activities to support a General, Organic and Biological Chemistry text Students can follow a guided inquiry approach as they learn chemistry in the classroom. General, Organic, and Biological Chemistry: A Guided Inquiry serves as an accompaniment to a GOB Chemistry text. It can suit the one- or two-semester course. This supplemental text supports Process Oriented Guided Inquiry Learning (POGIL), which is a student-focused, group-learning philosophy of instruction. The materials offer ways to promote a student-centered science classroom with activities. The goal is for students to gain a greater understanding of chemistry through exploration.

**Science Inquiry, Argument and Language** Sep 14 2021 Science Inquiry, Argument and Language describes research that has focused on addressing the issue of embedding language practices within science inquiry through the use of the Science Writing Heuristic approach.

*Chemistry, Student Solutions Manual* Aug 13 2021 The Spencer text is the only text that is built on independently researched pedagogy on the best way to teach General Chemistry. Chemistry: Structure and Dynamics, 5th Edition emphasises deep understanding rather than comprehensive coverage along with a focus on the development of inquiry and reasoning skills. While most mainstream General Chemistry texts offer a breadth of content coverage, the Spencer author team, in contrast, focuses on depth and student preparation for future studies. The fifth edition is revised in keeping with our commitment to the chemical education community and specifically the POGIL (Process Oriented Guided Inquiry Learning) Project. This text reflects two core principles, first that the concepts that are covered are fundamental building blocks for understanding chemistry and second, that the concepts should be perceived by the students as being directly applicable to their interests and careers. The authors further provide this

"core" coverage using 1 of 3 models; data-driven, chemical theories and students understanding, which allows for a more concrete foundation on which students build conceptual understanding.

**ECEL 2018 17th European Conference on e-Learning** Jan 06 2021 The European Conference on e-Learning was established 17 years ago. It has been held in France, Portugal, England, The Netherlands, Greece and Denmark to mention only a few of the countries who have hosted it. ECEL is generally attended by participants from more than 40 countries and attracts an interesting combination of academic scholars, practitioners and individuals who are engaged in various aspects of e-Learning. Among other journals, the Electronic Journal of e-Learning publishes a special edition of the best papers presented at this conference.

**Chemistry Education** Jan 18 2022 Winner of the CHOICE Outstanding Academic Title 2017 Award This comprehensive collection of top-level contributions provides a thorough review of the vibrant field of chemistry education. Highly-experienced chemistry professors and education experts cover the latest developments in chemistry learning and teaching, as well as the pivotal role of chemistry for shaping a more sustainable future. Adopting a practice-oriented approach, the current challenges and opportunities posed by chemistry education are critically discussed, highlighting the pitfalls that can occur in teaching chemistry and how to circumvent them. The main topics discussed include best practices, project-based education, blended learning and the role of technology, including e-learning, and science visualization. Hands-on recommendations on how to optimally implement innovative strategies of teaching chemistry at university and high-school levels make this book an essential resource for anybody interested in either teaching or learning chemistry more effectively, from experience chemistry professors to secondary school teachers, from educators with no formal training in didactics to frustrated chemistry students.

**Peer Coaching in Higher Education** Nov 04 2020 Peer Coaching in Higher Education describes a simple, five-step method for the improvement of teaching in colleges and universities. Professors and instructors in small groups, as departmental faculty, or as inter- and intra-departmental partners can increase faculty collegiality and improve their teaching techniques for increases in student learning. Gottesman explains the theory and practice of peer coaching, specifically describing its application among the faculty and students of five universities. She provides directions for a faculty conducting its own peer coaching seminar, including necessary hand-outs and examples. Actual peer coaching exchanges give faculty ideas about the extended applications of this process.
