[internal combustion engine cooling wikipedia](#) Oct 04 2020 internal combustion engine cooling uses either air or liquid to remove the waste heat from an internal combustion engine for small or special purpose engines cooling using air from the atmosphere makes for a lightweight and relatively simple system water has a higher heat capacity than air and can thus move heat more quickly away from

[heat sink wikipedia](#) Sep 27 2022 a heat sink also commonly spelled heatsink is a passive heat exchanger that transfers the heat generated by an electronic or a mechanical device to a fluid medium often air or a liquid coolant where it is dissipated away from the device thereby allowing regulation of the device s temperature in computers heat sinks are used to cool cpus gpus and some chipsets and

steam engine wikipedia Oct 16 2021 a steam engine is a heat engine that performs mechanical work using steam as its working fluid the steam engine uses the force produced by steam pressure to push a piston back and forth inside a cylinder this pushing force can be transformed by a connecting rod and crank into rotational force for work the term steam engine is generally applied only to reciprocating

exhaust system wikipedia Feb 20 2022 part of the pipe between the engine and the silencer is often flexible metal industrial ducting which helps to avoid vibration from the engine being transferred into the exhaust system sometimes a large diesel exhaust pipe is vertical to blow the hot noxious gas well away from people in such cases the end of the exhaust pipe often has a hinged metal flap to stop debris

fan machine wikipedia Nov 17 2021 a fan is a powered machine used to create a flow of air a fan consists of a rotating arrangement of vanes or blades generally made of wood plastic or metal which act on the air the rotating assembly of blades and hub is known as an impeller rotor or runner usually it is contained within some form of housing or case this may direct the airflow or increase safety by preventing

**natural gas condensate wikipedia** Oct 28 2022 natural gas condensate also called natural gas liquids is a low density mixture of hydrocarbon liquids that are present as gaseous components in the raw natural gas produced from many natural gas fields some gas species within the raw natural gas will condense to a liquid state if the temperature is reduced to below the hydrocarbon dew point temperature at a set pressure
