Teaching Literature and Medicine Aug 28 2019 Both the actualities and the metaphorical possibilities of illness and medicine abound in literature: from the presence of tuberculosis in Franz Kafka's fiction or childbed fever in Mary Shelley's Frankenstein to disease in Thomas Mann's Death in Venice or in Harold Pinter's A Kind of Alaska; from the stories of Anton Chekhov and of William Carlos Williams, both doctors, to the poetry of nurses derived from their contrasting experiences. These are just a few examples of the cross-pollination between literature and medicine. It is no surprise, then, that courses in literature and medicine flourish in undergraduate curricula, medical schools, and continuing-education programs throughout the United States and Canada. This volume, in the MLA series Options for Teaching, presents a variety of approaches to the subject. It is intended both for literary scholars and for physicians who teach literature and medicine or who are interested in enriching their courses in either discipline by introducing interdisciplinary dimensions. The thirty-four essays in Teaching Literature and Medicine describe model courses; deal with specific texts, authors, and genres; list readings widely taught in literature and medicine courses; discuss the value of texts in both medical education and the practice of medicine; and provide bibliographic resources, including works in the history of medicine from classical antiquity.

Promoting Health and Wellness in Underserved Communities Oct 03 2022 Starting from the premise that our health status, vulnerability to accidents and disease, and life spans – as individuals and communities – are determined by the organization, delivery, and financing (or lack thereof) of health care, this book explores how educators and community caretakers teach the complex web of inter-connection between the micro level of individual health and well-being and the macro level of larger social structures. Through the lenses of courses in anthropology, ESL, gerontology, management information systems, nursing, nutrition, psychology, public health, and sociology, the contributors offer examples of intergenerational and interdisciplinary practice, and share cutting-edge academic creativity to model how to employ community service learning to promote social

change.

Teaching Music in Higher Education Jan 26 2022 "This book is designed for faculty and graduate assistants working with undergraduate music majors as well as non-majors in colleges and universities in the United States. It includes suggestions for designing and organizing music courses (applied music as well as academic classes) and strategies for meeting the developmental needs of the undergraduate student. It addresses concerns about undergraduate curricula that meet National Association of School of Music requirements as well as teacher education requirements for music education majors in most states. A common theme throughout the book is a focus on "learner-centered pedagogy" (Weimer, 2013) or trying to meet students where they are and base instruction on their individual needs. The text also maintains a constant focus on the relationship between teaching and learning and encourages innovative ways for instructors to assess student learning in music courses. Teaching is connected throughout the book to student learning and the lecture model of "teaching as transmission of information" (Bain, 2004) is discouraged. Activities throughout the book ask instructors to focus on what it means to be an effective teacher for music courses. As there is limited research on teaching music in higher education, we have relied on comprehensive texts from the general education field to help provide the research base for our definition of effective teaching (Davis, 2009; Svinicki & McKeachie, 2014)"--

Mathematics for the Analysis of Algorithms Oct 30 2019 This monograph collects some fundamental mathematical techniques that are required for the analysis of algorithms. It builds on the fundamentals of combinatorial analysis and complex variable theory to present many of the major paradigms used in the precise analysis of algorithms, emphasizing the more difficult notions. The authors cover recurrence relations, operator methods, and asymptotic analysis in a format that is concise enough for easy reference yet detailed enough for those with little background with the material.

Life Science (Teacher Guide) Jun 30 2022 Chapter Discussion Question: Teachers are encouraged to participate with the student as they complete the discussion questions. The purpose of the Chapter Purpose section is to introduce the chapter to the student. The Discussion Questions are meant

to be thought-provoking. The student may not know the answers but should answer with their, thoughts, ideas, and knowledge of the subject using sound reasoning and logic. They should study the answers and compare them with their own thoughts. We recommend the teacher discuss the questions, the student's answers, and the correct answers with the student. This section should not be used for grading purposes. DVD: Each DVD is watched in its entirety to familiarize the student with each book in the course. They will watch it again as a summary as they complete each book. Students may also use the DVD for review, as needed, as they complete each chapter of the course. Chapter Worksheets: The worksheets are foundational to helping the student learn the material and come to a deeper understanding of the concepts presented. Often, the student will compare what we should find in the fossil record and in living creatures if evolution were true with what we actually find. This comparison clearly shows evolution is an empty theory simply based on the evidence. God's Word can be trusted and displayed both in the fossil record and in living creatures. Tests and Exams: There is a test for each chapter, sectional exams, and a comprehensive final exam for each book.
