Buying Information Systems Oct 25 2022

Most organisations purchase off-the-shelf computer-based systems to help them perform their day-to-day business activities. Sadly, many of the purchases fail to live up to expectations. This book provides a blueprint of what to cover in the early stages of the procurement process so as to prevent the recurring problem of information systems projects that run over budget, over time and yet under perform. The questions the book answers are simple but fundamental: where to find advice; who should be involved; how to manage the purchase; how to decide what you need; which package or

supplier to choose; how to manage the implementation, and how to know if the system is successful. Real examples of information system purchases are used to help provide practical guidance on the methods, the pitfalls and the keys to success. In addition the book contains several adaptable tables and checklists to provide a flexible and effective step-by-step framework for the entire process.

[New York State Contract Reporter](#) Sep 19 2019 [The Nursing Informatics Implementation Guide](#) Sep 12 2021 Health institutions are investing in and fielding information technology solutions at an unprecedented pace. With the recommendations from the Institute of Medicine around information technology solutions for patient safety, mandates from industry groups such as Leapfrog about using information systems to improve health care, and the move toward evidence based practice, health institutions cannot afford to retain manual practices. The installation of multi-

million dollar computerized health systems represents the very life blood of contemporary clinical operations and a crucial link to the financial viability of institutions. Yet, the implementation of health information systems is exceptionally complex, expensive and often just plain messy. The need for improvement in the art and science of systems implementation is clear: up to 70-80% of information technology installations fail. The reasons are multi-faceted, ranging from the complexity of the diverse workflows being computerized, the intricate nature of health organizations, the knowledge and skills of users to other reasons such as strategies for obtaining key executive support, weaving through the politics peculiar to the institution, and technical facets including the usability of systems. Thus, the art and science of successfully implementing systems remains deeply layered in elusiveness. Still, given the pervasiveness of system implementations and the importance of the outcomes, this is a critical topic, especially for nurses and informatics nurse specialists.
