What's in a Name Jan 08 2021 What ' s in a Name By: Vincent Tanner I know a hundred ways to kill. Some look like accidents. — Others — Natural causes. All of them completely untraceable. . . . Omega. That ' s what they call me. "Alpha" — means "The beginning." " Omega " — " The End. " How someone gets their beginning. Their Alpha is of no consequence to me. What they do governs when or if they meet up with Omega. They may never know how; they may never know why; they may never know it even happened — they simply cease to be. There is no mention of Omega in my line of work. To even think that name puts your life in danger. So it has been for many years. I am Omega. The end for many. I ' m what you might call a " Good bad guy " or a " Bad good guy. " It doesn ' t matter what you think of me. Just never cross me.

INTRODUCTION Food is surrounded by dangerous agents and conditions that can make people ill. As multiple handling and modern processing methods lengthen the journey from farm to table, the opportunities for food to become contaminated and/or spoiled increase. The veterinary food inspection specialist helps protect the food utilized by the military by insuring sanitary control of food establishments handling food for military use. This course discusses these sanitary controls. Foods undergo deterioration of varying degrees in their sensory characteristics, nutritional value, safety, and aesthetic appeal. Most foods, from the time they are harvested, slaughtered, or manufactured, undergo progressive deterioration that, depending upon the food, may be very slow or so rapid as to render the food virtually useless in a matter of hours. This presents a problem to the Department of Defense because food supplies have to be purchased well in advance of anticipated usage. Large quantities of food are lost each year due to deterioration. The problem is due to the perishable nature of food, as well as to the rather lengthy Defense subsistence supply chain. Due to these factors, veterinary food inspection specialists are tasked with recognizing deterioration in subsistence and making recommendations to preclude public health problems and financial losses to the Government. How do bacteria reproduce? Does the bacterial cell contain a nucleus? What are the shapes of bacteria? If you cannot answer these questions now, you should be able to when you have completed this course, and you should also know the answers to many other questions. For those of you who already know this material, let it serve as a review. Why are we interested in bacteria? Because some bacteria are capable of waging war on the human race and some bacteria are capable of benefiting our lives. We need to know the difference. Bacteria are microorganisms and microorganisms are the smallest of all organisms; for example, 2,000 of them can be lined up across the head of a common pin. In this subcourse, we will be concerned with those tiny organisms that are unfriendly, because they are responsible for a large percentage of spoilage in foods. We believe it is important to know about those microorganisms that cause food deterioration so that we can eliminate deterioration in foods before it occurs.

[Sherman](#) Oct 17 2021 "A superbly organized, well-written, detailed history of the Sherman tank" with hundreds of photos and diagrams included (Armor Magazine). The Medium Tank, M4, better known to the British as the Sherman, was the most widely used medium tank by the United States and western Allies in World War II. Reliable, relatively cheap to produce, and easy to maintain, thousands were distributed to the British Commonwealth and the Soviet Union by the Lend-Lease program. It first saw combat in North Africa, where it outclassed lighter German and Italian tanks. By 1944 the M4 was outgunned by the German heavy tanks, but it still contributed to the fight when deployed in numbers and supported by artillery and fighter-bombers. A detailed insight into the development and deployment of the M4, this book covers the design and construction of the chassis, turret, engine, armaments, and munitions, and differences between the variants of the M4. It covers the difficulties facing the crews who fought in this legendary tank, exploring the training they received and the different combat methods perfected by the Allies, including landing from a landing craft, maneuvering in the bocage of Normandy, and fighting in the snow. Fully illustrated with hundreds of contemporary and modern photographs and detailed diagrams, this complete account provides all the technical details of the construction of the M4, its maintenance and repair, and the logistics required to support it in combat. Whether you are a collector, a modeler, or simply passionate about military history, this book will provide you with an unparalleled insight into the M4. "Period photos, preservation shots, interior details, variant schematics, archival excerpts, armament and ammunition drawings, and more . . . Make it your introduction to this legendary tank family." —Cybermodeler

Surface and Underground Excavations, 2nd Edition May 24 2022 Surface and Underground Excavations – Methods, Techniques and Equipment (2nd edition) covers the latest technologies and developments in the excavation arena at any locale: surface or underground. In the first few chapters, unit operations are discussed and subsequently, excavation techniques are described for various operations: tunnelling, drifting, raising, sinking, stoping, quarrying, surface mining, liquidation and mass blasting as well as construction of large subsurface excavations such as caverns and underground chambers. The design, planning and development of excavations are treated in a separate chapter. Especially featured are methodologies to select stoping methods through incremental analysis. Furthermore, this edition encompasses comprehensive sections on mining at 'ultra depths', mining difficult deposits using non-conventional technologies, mineral inventory evaluation (ore – reserves estimation) and mine closure. Concerns over Occupational Health and Safety (OHS), environment and loss prevention, and sustainable development are also addressed in advocating a solution to succeed within a scenario of global competition and recession. This expanded second edition has been wholly revised, brought fully up-to-date and includes (wherever feasible) the latest trends and best practices, case studies, global surveys and toolkits as well as questions at the end of each chapter. This volume will now be even more appealing to students in earth sciences, geology, and in civil, mining and construction engineering, to practicing engineers and professionals in these disciplines as well as to all with a general or professional interest in surface and underground excavations.

Techno-economic performance review of selected fishing fleets in North and South America Nov 06 2020 This techno-economic performance review of selected fishing fleets in North and South America presents the findings of four country level studies of fishing fleets in the United States of America, Brazil, Chile and Peru. The review includes financial and economic information of 21 fishing fleet segments, including shrimp and groundfish trawlers, demersal trawlers, longliners, purse seiners, dredgers as well as hook and line fishing vessels. Analysis of the costs and earnings data of these important fishing fleet segments in North and South America, using survey data from 2012 -2017 for the US fleet segments and 2018 data for the South American countries ' fleets showed that 81 percent of the fleet segments had a positive net cash flow. The net profit margins of 38 percent of the 21 fishing fleet segments were >10%. Two-thirds (67%) of the fleet segments presented positive results in terms of their capital productivity as the return on fixed tangible assets (ROFTA) was positive. Twenty four percent of the fleet segments showed return on investment (ROI) figures of twenty percent or more. A majority of the Chilean and Peruvian fleet segments had ROIs of ten percent or higher in 2018. The financial and economic performance of the fishing fleet segments is not only affected by the seafood prices, but also by the fisheries management regime in place, fish species targeted, fish stock status and fishing methods and technologies applied. The age structure of the fishing vessels shows an increasing trend for most of the fishing fleet segments in this review, which adds to the apparent profitability of the vessels in these fleet segments as depreciation and interests on loans are minimized.
