Computerworld Mar 02 2020 For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide. Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

CANON DSLR: The Ultimate Photographer's Guide May 04 2020 So you have a Canon DSLR? Do you know how to get the most from your sophisticated camera? Canon DSLR: The Ultimate Photographer's Guide is a thorough, in-depth and step-by-step look at how to understand the Canon digital photography system and how to optimize your digital photography workflow from pre capture to output. Chris Grey shows you how to customize your DSLR according to the genre you are working in. He showcases the work of professional photographers from the worlds of wedding photography, fine art, sports/action, portrait and nature and each photographer explains their differing workflow requirements and how they get the best shots. Starting with the issues you will face: which file format - RAW or JPEG? Which camera? Which lens? Which software? - and moving on to covering the specific features of all the new Canon DSLRs in the EOS system, from the nifty Digital Rebel XTi to the awesome 1D Mark III, Chris Grey shows you how to get the most out of each camera. He shows images taken and the settings he has used so you can see the exact effect of each function. Packed with tips from the pros, key workflow solutions and images side by side showing different camera functions, this book is a must have for any Canon shooter.

Buried Cities, Forgotten Gods Oct 09 2020 "Niven was planning a book about his experiences, but never completed it owing to ill health. The result of twenty years' research, Buried Cities, Forgotten Gods offers a well-illustrated and vivid first-hand account through Wicks and Harrison's selection of photographs and stories from Niven's own extensive writings and those of people with whom he worked."--BOOK JACKET.

Ashland Nov 09 2020 Resting on the banks of the Ohio River, Ashland is eastern Kentucky's largest city. After the Poage family settled on land between Hoods and Keys Creeks in Boyd County, the area came to be known as the Poage's Settlement. Before long, a small town began to take form in the early 1800s with the establishment of a church, gristmill, sawmill, and homes built near Hoods Creek. In 1847, the townspeople built their first post office, and the Lexington and Big Sandy Railroad laid tracks through town, opening the area for even greater development. Named for the estate of Kentuckian Henry Clay, the city of Ashland was made official by an act of legislature in 1856.

[Celestial Shadows](#) Mar 26 2022 Much of what is known about the universe came from the study of celestial shadows. This book looks in detail at the way eclipses and other celestial shadows have given us amazing insights into the nature of the objects in our solar system and how they are even helping us discover and analyze planets that orbit stars other than our Sun. A variety of eclipses, transits, and occultations of the moons of Jupiter and Saturn, Pluto and its satellite Charon, asteroids and stars have helped astronomers to work out their dimensions, structures, and shapes - even the existence of atmospheres and structures of exoplanets. Long before Columbus set out to reach the Far East by sailing West, the curved shadow of the Earth on the Moon during a lunar eclipse revealed that we inhabit a round world, a globe. More recently, comparisons of the sunlit and Earthlit parts of the Moon have been used to determine changes in the Earth's brightness as a way of monitoring possible effects in cloud coverage which may be related to global warming. Shadows were used by the Greek mathematician Eratosthenes to work out the first estimate of the circumference of the Earth, by Galileo to measure the heights of the lunar mountains and by eighteenth century astronomers to determine the scale of the Solar System itself. Some of the rarest and most wonderful shadows of all are those cast onto Earth by the lovely "Evening Star" Venus as it goes between the Earth and the Sun. These majestic transits of Venus occur at most two in a century; after the 2012 transit, there is not a chance to observe this phenomenon until 2117, while the more common sweep of a total solar eclipse creates one of the most dramatic and awe-inspiring events of nature. Though it may have once been a source of consternation or dread, solar eclipses now lead thousands of amateur astronomers and "eclipse-chasers" to travel the globe in order to experience the dramatic view under "totality." These phenomena are among the most spectacular available to observers and are given their full due in Westfall and Sheehan's comprehensive study.

[Science in the Archives](#) Aug 26 2019 "Science in the Archives" reveals affinities and continuities among the sciences of the archives, across many disciplines and centuries, in order to present a better picture of essential archival practices and, thereby, the meaning of science. For in both the natural and human sciences, archives of the most diverse forms make cumulative, collective knowledge possible. Yet in contrast to laboratories, observatories, or the field, archives have yet to be studied across the board as central sites of science. The volume covers episodes in the history of astronomy, geology, genetics, classical philology, climatology, history, medicine, and ancient natural philosophy, as well as fundamental practices such as collecting, retrieval strategies, and data mining. The time frame spans doxology in Greco-Roman antiquity to NSA surveillance techniques and the quantified-self movement. Each chapter explores the practices, politics, economics, and open-ended potential of the sciences of the archives, making this the first book devoted to the role of archives in the natural and human sciences.

Five Millennium Canon of Lunar Eclipses Nov 29 2019

The Chinese Literary Canon Jan 12 2021 In The Chinese Literary Canon, one of China's most brilliant critics puts three millennia of Chinese writing in its proper

historical context. He shows us what to read and how to read it. Yu Qiuyu traces a bright line of the very best literature that China has produced: from the first carvings on bone, through the first poems, the first philosophers, the greatest historian, to the ultimate stylists of the Tang Dynasty and beyond. And because brilliant literature is always a product of its time and place, Yu tells us about the men who did the writing and the worlds in which they lived. Most of all, Yu tells us about the ideas that motivated them, how they read the writers of the past, and how each writer of genius transformed and added his own stamp to the literary canon. The Yellow Emperor, the Book of Poetry, Confucius and Laozi, the great historian Sima Qian, Cao Cao, Kumarajiva, Li Bai, Du Fu, Cao Xueqin... Their thread weaves in and out of the history of the first Chinese, the Warring States, the unification under Qin, the destructive split into the Three Kingdoms, and the cosmopolitan Tang Dynasty. All of this history is interpreted and presented in the warm, distinctive voice of a truly great reader, Yu Qiuyu.

The Trees of Great Britain and Ireland Jan 30 2020 This well-illustrated seven-volume work (1906-13) covers the varieties, distribution, history and cultivation of tree species in the British Isles.

Five Millennium Canon of Solar Eclipses Jan 24 2022 During the 5,000-year period from -1999 to +3000 (2000 BCE to 3000 CE), Earth will experience 11,898 eclipses of the Sun. The eclipses are distributed as follows: 4200 partial eclipses, 3956 annular eclipses, 3173 total eclipses, and 569 hybrid eclipses. The "Five Millennium Canon of Solar Eclipses" contains an individual global map for each eclipse delineating the geographic regions of visibility for both the partial and central (total, annular, or hybrid) phases. Modern political borders are plotted to assist in the determination of eclipse visibility. The uncertainty in Earth's rotational period expressed in  $\Delta T$  and its impact on the geographic visibility of eclipses in the past and future is discussed. The statistics of the solar eclipse distribution over 5,000 years are discussed in detail. This includes eclipse types by month and by century, eclipse frequency in the calendar year, extremes in eclipse magnitude for all eclipse types, maximum durations of total, annular, and hybrid eclipses, and eclipse duos (two eclipses within 30 days of each other). Finally, the periodicity of solar eclipses is investigated with particular attention to the Saros cycle. Tables list the start and end dates, number, and type of eclipses of every Saros series in progress during the 5,000-year period covered by the Five Millennium Canon. The "Five Millennium Canon of Solar Eclipses" comprises two volumes. Volume 1 covers eclipses for the years -1999 to 0, while volume 2 covers eclipses for the years 1 to 3000.

John Paul II and World Politics Aug 07 2020 One of the few works done recently on the international position of the Holy See. Drawn from a series of lectures given by Colombo Sacco, an Italian diplomat, at the University of Milan and at the Catholic University of Leuven, the book examines the first twenty years of Pope Wojtyła's pontificate, highlighting the Vatican's increasing involvement in international politics. Thus, it illustrates Karol Wojtyła's thought in this field and his guidelines for the development of international law: human rights, the rights of peoples and nations, the right of humanitarian intervention, development cooperation. The volume is completed by an essential bibliography and a selection of primary sources.
