Ferry Pilot Nov 24 2019 Kerry McCauley has the job most pilots can only dream of: delivering small used aircraft to locations around the world. In his 30 years as an international ferry pilot, Kerry has delivered almost every kind of airplane you can name to almost every location you can think of. In his long career Kerry battled fuel system malfunctions over the Atlantic, a total electrical failure at night over the Sahara, getting lost over Africa and getting struck by lightning off the coast of Portugal. Not to mention losing his engine and having to fly dead stick in a thunderstorm. Kerry's almost insatiable, reckless quest for danger and adventure also led to putting international smuggler and bank robber on his resume. Kerry found the answer to the question "What could possibly go wrong?" time and time again. But his skill, ingenuity and a heavy dose of luck were what allowed him to survive the countless mishaps, catastrophes, close calls and a nearly fatal plane crash. While *Ferry Pilot* is a riveting account of one man's crazy thirst for thrills and adventure, it's also a portrait of a brave and devoted family man who lost many close friends, including his first wife, to the dangerous skies.

The Dangers of Automation in Airliners Feb 20 2022 The award-winning journalist delves "into the confluence of modern airplane technology and pilot behavior to probe how and why flight disasters happen" (BookTrib). Aviation automation has been pushed to its limits, with pilots increasingly relying on it. Autopilot, autothrottle, autoland, flight management systems, air data systems, inertial guidance systems. All these systems are only as good as their inputs which, incredibly, can go rogue. Even the automation itself is subject to unpredictable failure. And what of the pilots? They began flight training with their hands on the throttle and yoke, and feet on the rudder pedals. Then they reached the pinnacle of their careers—airline pilot—and suddenly they were going hours without touching the controls other than for a few minutes on takeoff and landing. Are their skills eroding? Is their training sufficient to meet the demands of today's planes? *The Dangers of Automation in Airliners* delves deeply into these questions. You'll be in the cockpits of the two doomed Boeing 737 MAXs, the Airbus A330 lost over the South Atlantic, and the Bombardier Q400 that stalled over Buffalo. You'll discover exactly why a Boeing 777 smacked into a seawall, missing the runway on a beautiful summer morning. And you'll watch pilots battling—sometimes winning and sometimes not—against automation run amok. This book also investigates the human factors at work. You'll learn why pilots might overlook warnings or ignore cockpit alarms. You'll observe automation failing to alert aircrews of what they crucially need to know while fighting to save their planes and their passengers. The future of safe air travel depends on automation. This book tells its story.

Flying Blind Apr 22 2022 'The astoundingly well reported and beautifully told story of the downfall of what was once a great American company. A must-read' Bethany McLean, bestselling author of *The Smartest Guys in the Room* 'Compelling and richly reported, *Flying Blind* is about so much more than the sad decline of Boeing and the tragic mistakes that led to the 737 Max disaster. It's also the urgent story of how the almighty profit motive supplanted a culture of engineering excellence in boardrooms across America' Brad Stone, bestselling author of *The Everything Store* The definitive exposé of how Boeing put profit before passengers, leading to the devastating loss of life in the 737 MAX crashes and the downfall of an American business giant In examining the history of the 737, *Flying Blind* explores how Boeing's new management degraded a highly-regarded plane with cost-focused mandates and skimmed on testing in the race to match a competing plane from Airbus. How Boeing outsourced software work to poorly paid graduates in India and convinced the US Federal Aviation Authority to put the MAX into service without requiring pilots to undergo simulator training, and how ultimately these failures resulted in the deaths of 346 Boeing passengers. Framed around the 737 MAX crashes, *Flying Blind* is the definitive exposé that for the first time tells the larger, decades-long story of how a corrupt corporate culture paved the way for a cataclysm that cost lives. 'Vividly written and meticulously researched, *Flying Blind* is a story everyone - every consumer, every citizen, every worker in every industry - needs to read' Diana B. Henriques, *New York Times* bestselling author of *The Wizard of Lies: Bernie Madoff and the Death of Trust* 'A gripping narrative and required reading for anyone who wants to understand how one of America's mightiest corporations veered so badly off course' Sheelah Kolhatkar, *New Yorker* staff writer and bestselling author of *Black Edge*

QF32 Dec 26 2019 QF32 is the award winning bestseller from Richard de Crespigny, author of the forthcoming *Fly! Life Lessons from the Cockpit of QF32* On 4 November 2010, a flight from Singapore to Sydney came within a knife edge of being one of the world's worst air disasters. Shortly after leaving Changi Airport, an explosion shattered Engine 2 of Qantas flight QF32 - an Airbus A380, the largest and most advanced passenger plane ever built. Hundreds of pieces of shrapnel ripped through the wing and fuselage, creating chaos as vital flight systems and back-ups were destroyed or degraded. In other hands, the plane might have been lost with all

469 people on board, but a supremely experienced flight crew, led by Captain Richard de Crespigny, managed to land the crippled aircraft and safely disembark the passengers after hours of nerve-racking effort. Tracing Richard's life and career up until that fateful flight, QF32 shows exactly what goes into the making of a top-level airline pilot, and the extraordinary skills and training needed to keep us safe in the air. Fascinating in its detail and vividly compelling in its narrative, QF32 is the riveting, blow-by-blow story of just what happens when things go badly wrong in the air, told by the captain himself. Winner of ABIA Awards for Best General Non-fiction Book of the Year 2013 and Indie Awards' Best Non-fiction 2012 Shortlisted ABIA Awards' Book of the Year 2013

The Status of the Boeing 737 Max and Flight Control System Review May 11 2021 Chapters 1 and 2 explore the Lion Air Flight 610 and Ethiopian Airlines Flight 302 accidents, the resulting international grounding of the Boeing 737 MAX aircraft, and actions needed to ensure the safety of the aircraft before returning them to revenue service. Because of apparent similarities in factors that may have contributed to the Lion Air Flight 610 and Ethiopian Airlines Flight 302 accidents, the FAA Associate Administrator for Aviation Safety established a Joint Authorities Technical Review (JATR) to review the type certification of the flight control system on the B737 MAX. Chapter 3 discusses the recommendations pertaining to that review.

The Field Guide to Human Error Investigations Mar 29 2020 This title was first published in 2002: This field guide assesses two views of human error - the old view, in which human error becomes the cause of an incident or accident, or the new view, in which human error is merely a symptom of deeper trouble within the system. The two parts of this guide concentrate on each view, leading towards an appreciation of the new view, in which human error is the starting point of an investigation, rather than its conclusion. The second part of this guide focuses on the circumstances which unfold around people, which causes their assessments and actions to change accordingly. It shows how to "reverse engineer" human error, which, like any other component, needs to be put back together in a mishap investigation.

Boeing 737 May 23 2022 The Boeing 737 is an American short- to medium-range twinjet narrow-body airliner developed and manufactured by Boeing Commercial Airplanes, a division of the Boeing Company. Originally designed as a shorter, lower-cost twin-engine airliner derived from the 707 and 727, the 737 has grown into a family of passenger models with capacities from 85 to 215 passengers, the most recent version of which, the 737 MAX, has become embroiled in a worldwide controversy. Initially envisioned in 1964, the first 737-100 made its first flight in April 1967 and entered airline service in February 1968 with Lufthansa. The 737 series went on to become one of the highest-selling commercial jetliners in history and has been in production in its core form since 1967; the 10,000th example was rolled out on 13 March 2018. There is, however, a very different side to the convoluted story of the 737's development, one that demonstrates a transition of power from a primarily engineering structure to one of accountancy, number-driven powerbase that saw corners cut, and the previous extremely high safety methodology compromised. The result was the 737 MAX. Having entered service in 2017, this model was grounded worldwide in March 2019 following two devastating crashes. In this revealing insight into the Boeing 737, the renowned aviation historian Graham M. Simons examines its design, development and service over the decades since 1967. He also explores the darker side of the 737's history, laying bare the politics, power-struggles, changes of management ideology and battles with Airbus that culminated in the 737 MAX debacle that has threatened Boeing's very survival.

Britannia Airways Oct 16 2021 A history of the British airline company, featuring details on the aircrafts, routes, and operations, as well as stories from the crews and staff. Founded in 1961 as Euravia by British businessman Ted Langton and aviation consultant J.E.D. Walker, at a time of considerable turmoil for the independent sector of the British air operators' industry, Britannia Airways went on to become the world's largest holiday airline. Just as Court Line evolved from Autair, so Britannia Airways evolved from Euravia. Both UK airlines had strong links with the travel industry; Court Line with Clarksons Holidays, and Britannia with the Thomson Group, in particular the 'Sky Tours' brand. Both were innovative in their own ways, and both grabbed the UK travel industry by the scruff of the neck and shook it into the jet age – Court line traveling down the brasher cheap-and-cheerful road, while

Britannia took the more staid, upmarket route. By 1972, Britannia had developed to such a degree that it was the biggest of the British independent charter airlines. It was also a groundbreaking operation—during the late 1960s, it became the first charter airline to offer assigned seating, as well as hot in-flight meals. Prior to the mid-1970s, Britannia, much like other British charter airlines of the era, had concentrated upon low-cost flights to Spain and the use of provincial airports to provide its services. The company's management, however, harbored ambitions to grow beyond this. As a result, for example, Britannia's 767s began regular charter flights between Britain and Australia in 1988, a route to New Zealand being added the following year. Between 1968 and 1984, Britannia carried nearly forty-two million passengers, while the company's fleet grew to include twenty-nine Boeing 737s and a pair of 767s. Drawing on the author's in-depth research and knowledge, as well as firsthand interviews with individuals such as Ted Langton, the original tour operator who wanted his own airline, and Jed Williams, who created Britannia, this the full story of one of the most important airlines in the history of civil aviation.
