Automotive Machining Jul 28 2019 Machining is an essential part of high-performance engine building and stock rebuilding, as well as certain servicing procedures. Although you may not own the expensive tooling and machining to perform all or any of the machining required for a quality build, you need to understand the principles, procedures, and goals for machining, so you can guide the machining process when outsourced. Classic and older engines typically require extensive machining and almost every major component of engine, including block, heads, intake, crankshaft, and pistons, require some sort of machining and fitment. A detailed, authoritative, and thorough automotive engine-machining guide for the hard-core enthusiast has not been available until now. Mike Mavrigian, editor of Engine Building Professional, walks you through each important machining procedure. A stock 300-hp engine build has far different requirements than a 1,000-hp drag race engine, and Mavrigian reveals the different machining procedures and plans according to application and engine design. The author also shows you how to inspect, measure, and evaluate components so you can provide astute guidance and make the best machine work choices. Machining procedures included are cylinder boring, align boring/honing, decking, valveseat cutting, cam tunnel boring, and a multitude of other services. In addition, multi-angle valve jobs, setting the valveseats, altering rocker arm ratio, re-conditioning connecting rods, and machining and matching valvetrain components are also covered. Whether you're an enthusiast engine builder or prospective machining student who wants to pursue a career as an automotive machinist, this book will provide insight and in-depth instruction for performing the most common and important

Ford Focus RS WRC World Rally Car 1989 to 2010 Aug 28 2019 When world rallying introduced a new formula for "World Rally Cars", Ford seized the opportunity. Malcolm Wilson's M-Sport organization was contracted to do the job, completed the design in less than a year, and spent the next 12 years campaigning this turbocharged, four-wheel-drive car all round the world. Working from state-of-the-art facilities, M-Sport built 97 Focus WRCs, all of which proved to be worthy of World level action when they won 44 World Championship events. Stellar drivers like Colin McRae, Carlos Sainz, Markko Märtin, Marcus Grönholm and Mikko Hirvonen all added to the mystique of an ultra-professional organization, along with substantial support and sponsorship from the likes of Martini, BP, and the state of Abu Dhabi. By building its in-house technical expertise, M-Sport not only engineered and developed the entire car on behalf of Ford, but gradually took over development of the 300bhp, 2.0-litre, turbocharged engine, and led the design of the complex four-wheel-drive transmissions provided by Xtrac. M-Sport's reputation exploded to the point that when regulations changed, the company immediately produced a new-generation Fiesta WRC, and kept the winning days rolling.
