**The Jewel House** Sep 20 2021 The #1 New York Times–bestselling author of *A Discovery of Witchess* examines the real-life history of the scientific community of Elizabethan London. Travel to the streets, shops, back alleys, and gardens of Elizabethan London, where a boisterous and diverse group of men and women shared a keen interest in the study of nature. These assorted merchants, gardeners, barber-surgeons, midwives, instrument makers, mathematics teachers, engineers, alchemists, and other experimenters formed a patchwork scientific community whose practices set the stage for the Scientific Revolution. While Francis Bacon has been widely regarded as the father of modern science, scores of his London contemporaries also deserve a share in this distinction. It was their collaborative, yet often contentious, ethos that helped to develop the ideals of modern scientific research. The book examines six particularly fascinating episodes of scientific inquiry and dispute in sixteenth-century London, bringing to life the individuals involved and the challenges they faced. These men and women experimented and invented, argued and competed, waged wars in the press, and struggled to understand the complexities of the natural world. Together their stories illuminate the blind alleys and surprising twists and turns taken as medieval philosophy gave way to the empirical, experimental culture that became a hallmark of the Scientific Revolution. "Elegant and erudite." —Anthony Grafton, *American Scientist* "A truly wonderful book, deeply researched, full of original material, and exhilarating to read." —John Carey, *Sunday Times* "Widely accessible." —Ian Archer, *Oxford University* "Vivid, compelling, and panoramic, this revelatory work will force us to revise everything we thought we knew about Renaissance science." —Adrian Johns, author of *The Nature Book*

**The Great Endarkenment** Mar 15 2021 Human beings have always been specialists, but over the past two centuries division of labor has become deeper, ubiquitous, and much more fluid. The form it now takes brings in its wake a series of problems that are simultaneously philosophical and practical, having to do with coordinating the activities of experts in different disciplines who do not understand one another. Because these problems are unrecognized, and because we do not have solutions for them, we are on the verge of an age in which decisions that depend on understanding more than one discipline at a time will be made badly. Since so many decisions do require multidisciplinary knowledge, these philosophical problems are urgent. Some of the puzzles that have traditionally been on philosophers' agendas have to do with intellectual devices developed to handle less extreme forms of specialization. Two of these, necessity and the practical 'ought', are given extended treatment in Elijah Millgram's *The Great Endarkenment*. In this collection of essays, both previously published and new, Millgram pays special attention to ways a focus on cognitive function reframes familiar debates in metaethics and metaphysics. Consequences of hyperspecialization for the theory of practical rationality, for our conception of agency, and for ethics are laid out and discussed. An Afterword considers whether and how philosophers can contribute to solving the very pressing problems created by contemporary division of labor. "These always interesting, often brilliant, and contentious essays focus on the question of how we need to reason practically, if we are to flourish, given Millgram's account of our human nature and of the environments that we inhabit. The originality of his thought is matched by his clarity and his wit."—Alasdair MacIntyre, *University of Notre Dame*

This book offers an evidence-based and practical approach to the identification and remediation of medical trainees who are unable to perform to standards. As assessment of clinical competence and professionalism has become more sophisticated and ubiquitous, medical educators increasingly face the challenge of implementing effective and respectful means to work with trainees who do not yet meet expectations of the profession and society. Remediation in Medical Education: A Mid-Course Correction describes practical stepwise approaches to remediate struggling learners in fundamental medical competencies; discusses methods used to define competencies and the science underlying the fundamental shift in the delivery and assessment of medical education; explores themes that provide context for remediation, including professional identity formation and moral reasoning, verbal and nonverbal learning disabilities, attention deficit disorders in high-functioning individuals, diversity, and educational and psychiatric topics; and reviews system issues involved in remediation, including policy and leadership challenges and faculty development.
