[Economic Models for Managing Cloud Services](#) Sep 02 2022 The authors introduce both the quantitative and qualitative economic models as optimization tools for the selection of long-term cloud service requests. The economic models fit almost intuitively in the way business is usually done and maximize the profit of a cloud provider for a long-term period. The authors propose a new multivariate Hidden Markov and Autoregressive Integrated Moving Average (HMM-ARIMA) model to predict various patterns of runtime resource utilization. A heuristic-based Integer Linear Programming (ILP) optimization approach is developed to maximize the runtime resource utilization. It deploys a Dynamic Bayesian Network (DBN) to model the dynamic pricing and long-term operating cost. A new Hybrid Adaptive Genetic Algorithm (HAGA) is proposed that optimizes a non-linear profit function periodically to address the stochastic arrival of requests. Next, the authors explore the Temporal Conditional Preference Network (TempCP-Net) as the qualitative economic model to represent the high-level IaaS business strategies. The temporal qualitative preferences are indexed in a multidimensional k-d tree to efficiently compute the preference ranking at runtime. A three-dimensional Q-learning approach is developed to find an optimal qualitative composition using statistical analysis on historical request patterns. Finally, the authors propose a new multivariate approach to predict future Quality of Service (QoS) performances of peer service providers to efficiently configure a TempCP-Net. It discusses the experimental results and evaluates the efficiency of the proposed composition framework using Google Cluster data, real-world QoS data, and synthetic data. It also explores the significance of the proposed approach in creating an economically viable and stable cloud market. This book can be utilized as a useful reference to anyone who is interested in theory, practice, and application of economic models in cloud computing. This book will be an

invaluable guide for small and medium entrepreneurs who have invested or plan to invest in cloud infrastructures and services. Overall, this book is suitable for a wide audience that includes students, researchers, and practitioners studying or working in service-oriented computing and cloud computing.

**Early Intervention in Psychiatry** Aug 28 2019 Early intervention (EI) is the single most important advance in mental health care in recent decades, representing a key shift in both theoretical standpoint and service delivery. Early Intervention in Psychiatry clearly describes best practice for extending this approach to all psychiatric disorders. Beginning with the rationale for EI, it informs interventions in people from all age groups across the lifespan, from perinatal to old age. It addresses EI in specific settings, such as primary health care, community health, the general hospital, non-government agencies, and in social movements, and for specific disorders including depression and anxiety, alcohol and substance use, childhood disorders, psychoses, bipolar disorders, eating disorders and borderline personality disorders. Early Intervention in Psychiatry is an essential guide for all psychiatrists, general practitioners, family physicians and public health doctors. It is also a valuable resource for mental health professionals and primary care colleagues, including nurses, social workers, psychologists, occupational therapists, vocational rehabilitation specialists, peer and support workers and for mental health commissioners and policy-makers.

**Parenting and Family Processes in Child Maltreatment and Intervention** Apr 28 2022 This clear-sighted reference offers a transformative new lens for understanding the role of family processes in creating — and stopping — child abuse and neglect. Its integrative perspective emphasizes the interconnectedness of forms of abuse, the diverse mechanisms of family violence, and a child/family-centered, strengths-based approach to working with families. Chapters review evidence-based interventions and also model collaboration between family professionals for effective coordination of treatment and other services. This powerful ecological framework has major implications for improving assessment, treatment, and prevention as well as future research on child maltreatment. Included among the topics:- Creating a safe haven following child maltreatment: the benefits and limits of social support.- “Why didn’t you tell?” Helping families and children weather the process following a sexual abuse disclosure.- Environments recreated: the unique struggles of children born to abused mothers.- Evidence-based intervention: trauma-focused cognitive behavioral therapy for children and families.- Preventing the intergenerational transmission of child maltreatment through relational interventions.- Reducing the risk of child maltreatment: challenges and opportunities. Professionals and practitioners particularly interested in family processes, child maltreatment, and developmental psychology will find Parenting and Family Processes in Child Maltreatment and Intervention a major step forward in breaking entrenched abuse cycles and keeping families safe.

**Urbanization, Biodiversity and Ecosystem Services: Challenges and Opportunities** Mar 16 2021 Urbanization is a global phenomenon and the book emphasizes that this is not just a social-technological process. It is also a social-ecological process where cities are places for nature, and where cities also are dependent on, and have impacts on, the biosphere at different scales from local to global. The book is a global assessment and delivers four main conclusions: Urban areas are expanding faster than urban populations. Half the increase in urban land across the world over the next 20 years will occur in Asia, with the most extensive change expected to take place in India and China Urban areas modify their local and regional climate through the urban heat island effect and by altering precipitation patterns, which together will have significant impacts on net primary production, ecosystem health, and biodiversity Urban expansion will heavily draw on natural resources, including water, on a global scale, and will often consume prime agricultural land, with knock-on effects on biodiversity and ecosystem services elsewhere Future urban expansion will often occur in areas where the capacity for formal governance is restricted, which will constrain the protection of biodiversity and management of ecosystem services
