Regression with Graphics Apr 29 2020 This text demonstrates how computing power has expanded the role of graphics in analyzing, exploring, and experimenting with raw data. It is primarily intended for students whose research requires more than an introductory statistics course, but who may not have an extensive background in rigorous mathematics. It's also suitable for courses with students of varying mathematical abilities. Hamilton provides students with a practical, realistic, and graphical approach to regression analysis so that they are better prepared to solve real, sometimes messy problems. For students and professors who prefer a heavier mathematical emphasis, the author has included optional sections throughout the text where the formal, mathematical development of the material is explained in greater detail. REGRESSION WITH GRAPHICS is appropriate for use with any (or no) statistical computer package.

However, Hamilton used STAT A in the development of the text due to its ease of application and sophisticated graphics capabilities. (STATA is available in a student package from Duxbury including a tutorial by the same author: Hamilton, STATISTICS WITH STAT A, 5.0, 1998; ISBN: 0-534-31874-6.)

The Woodland Southeast Nov 24 2019 This collection presents, for the first time, a much-needed synthesis of the major research themes and findings that characterize the Woodland Period in the southeastern United States. The Woodland Period (ca. 1200 B.C. to A.D. 1000) has been the subject of a great deal of archaeological research over the past 25 years. Researchers have learned that in this approximately 2000-year era the peoples of the Southeast experienced increasing sedentism, population growth, and organizational complexity. At the beginning of the period, people are assumed to have been living in small groups, loosely bound by collective burial rituals. But by the first millennium A.D., some parts of the region had densely packed civic ceremonial centers ruled by hereditary elites. Maize was now the primary food crop. Perhaps most importantly, the ancient animal-focused and hunting-based religion and cosmology were being replaced by solar and warfare iconography, consistent with societies dependent on agriculture, and whose elites were increasingly in competition with one another. This volume synthesizes the research on what happened during this era and how these changes came about while analyzing the period's archaeological record. In gathering the latest research available on the Woodland Period, the editors have included contributions from the full range of specialists working in the field, highlighted major themes, and directed readers to the proper primary sources. Of interest to archaeologists and anthropologists, both professional and amateur, this will be a valuable reference work essential to understanding the Woodland Period in the Southeast.

Social Predation May 31 2020 The classic literature on predation dealt almost exclusively with solitary predators and their prey. Going back to Lotka-Volterra and optimal foraging theory, the theory about predation, including predator-prey population dynamics, was developed for solitary species. Various consequences of sociality for predators have been considered only recently. Similarly, while it was long recognized that prey species can benefit from living in groups, research on the adaptive value of sociality for prey species mostly emerged in the 1970s. The main theme of this book is the various ways that predators and prey may benefit from living in groups. The first part focusses on predators and explores how group membership influences predation success rate, from searching to subduing prey. The second part focusses on how prey in groups can detect and escape predators. The final section explores group size and composition and how individuals respond over evolutionary times to the challenges posed by chasing or being chased by animals in groups. This book will help the reader understand current issues in social predation theory and provide a synthesis of the literature across a broad range of animal taxa. Includes the whole taxonomical range rather than limiting it to a select few Features in-depth analysis that allows a better understanding of many subtleties surrounding the issues related to social predation Presents both models and empirical results while covering the extensive predator and prey literature Contains extensive illustrations and separate boxes that cover more technical features, i.e., to present models and review results

Statistics with Stata Feb 26 2020 Stata is a powerful data analysis software. This handbook was designed to bridge the gap between textbooks and Stata's own documentation. In this intermediary role, STATISTICS WITH STATA uses easy to follow tutorials to demonstrate how to use Stata to accomplish some of the most common statistical tasks. While Stata's user documentation is over 4,000 pages, this tidy manual is just 400 pages, and introduces students and practitioners to both basic and advanced features of Stata.

The Pastor as Evangelist Mar 29 2020 From a minister, professor, and recognized leader in the field of evangelism comes a challenge to pastors to take a new look at their mission. Richard Stall Armstrong invites pastors to put on "evangelistic glasses" to perceive what it means to be a pastor-evangelist in terms of personal relationships and in light of the various factors that define evangelism. Clearly and compellingly, Armstrong shows how to take the responsibility for evangelism seriously. He analyzes in a concrete way the many contexts of evangelism--the difference between witnessing to the young and the old, to individuals and groups, on the telephone or on television. He counsels pastors to adopt not a particular method but rather a style that is nondogmatic, that blends consistency with flexibility, and, above all, one that reflects the integrity and power of the Christian message. Biblically based, theologically sound, and vocationally relevant, this book is full of useful ideas and practical suggestions that will benefit pastors, professors, and seminarians.
