Concussion in Professional Team Sports: Time for a Harmonised Approach? May 02 2020 The risk of athletes sustaining concussion while participating in professional team sports raises two serious

concerns both nationally and internationally. First, concussion in sport carries a public health risk, given that injured athletes may have to deal with significant long-term medical complications, with some of the worst cases resulting in Chronic Traumatic Encephalopathy (CTE). Secondly, sports governing bodies are now exposed to the risk of financial and reputational damage as a consequence of legal proceedings being filed against them. A good example of this, among many other recent examples, is the case of the United States of America's National Football League (NFL), the governing body for American football, which, in 2015, committed to pay US\$ 1 billion to settle the class action filed by its former professional players. This book examines how to most efficiently reduce these public health and legal risks, and proposes a harmonised solution across sports and legal systems.

1890-1926 include also Decisions of the Board of U.S. General Appraisers no. 1-9135.

Geologic History of the Feather River Country, California Aug 05 2020

How did the Sierra Nevada and adjacent lands come to be the size and shape they are today? This book covers 400 million years of physical evolution in a language understandable to nonscientists, tracing the volcanic activity, the folding and building of mountains, the breaking of blocks along fault lines, and the work of erosion and glaciers that have created today's dramatic landscape. Cordell Durrell spent a lifetime reading this complex story of movement and change in the rocks of the Feather River country. He shares with readers the excitement of discovering by remote but careful inference what must have happened millions upon millions of years ago. The basic methods of geologic analysis that Durrell describes can be applied anywhere on the earth's surface, lending new fascination to our travels throughout the frozen arctic, dry deserts, tropical rainforests, low swamps, and high mountains like California's magnificent Sierra.
