What Your Mother Never Told You about Online Trolls Aug 26 2022 If you are going to use Social Media, especially as a content creator, you are inevitably going to have to deal with haters, trolls and detractors. In dealing with them, it is important that you engage them from a position of power and as one who is in control of the frame of the interactions between you and them. These people can be annoying, frustrating and most of all angering. This is exactly what the troll wants. Trolls want to make you emotional so that you react to them, giving them control over you and your platform. Thus allowing them to take control of what you've built or use for their entertainment. If you quit, they win, and if you react to them, they win. When you understand this, you understand that all of their tools are meant to reach one of these two goals; which gives you the power to thwart them from the start. If you understand a person's intentions and desired outcomes, you can control all interactions between them. I have dealt with all of these emotions when dealing with the online legions of people, who seem to lack direction and purpose in their lives; and used it to fuel my passions and goals. Had I not faced the online mob of haters and trolls, I would not have written this brief treatise about them. This is what makes people, like you and I, different. We create and build and do not hate and attempt to destroy.

The Book of L Aug 02 2020 This book is dedicated to Aristid Lindenmayer on the occasion of his 60th birthday on November 17, 1985. Contributions range from mathematics and theoretical computer science to biology. Aristid Lindenmayer introduced language-theoretic models for developmental biology in 1968. Since then the models have been cus tomarily referred to as L systems. Lindenmayer's invention turned out to be one of the most beautiful examples of interdisciplinary science: work in one area (developmental biology) induces most fruitful ideas in other areas (theory of formal languages and automata, and formal power series). As evident from the articles and references in this book, the in terest in L systems is continuously growing. For newcomers the first contact with L systems usually happens via the most basic class of L systems, namely, DOL systems. Here "0" stands for zero context between developing cells. It has been a major typographical problem that printers are unable to distinguish between 0 (zero) and 0 (oh). Thus, DOL was almost always printed with "oh" rather than "zero", and also pronounced that way. However, this misunderstanding turned out to be very fortunate. The wrong spelling "DOL" of "DOL" could be read in the suggestive way: DO L Indeed, hundreds of researchers have followed this suggestion. Some of them appear as contributors to this book. Of the many who could not contribute, we in particular regret the absence of A. Ehrenfeucht, G. Herman and H.A. Maurer whose influence in the theory of L systems has been most significant.
