Life Support May 06 2020 "A beautiful, profound, and profoundly important book.... Gordon's message is simplicity itself: sick people need skilled, humane, and insightful care that keeps their interests paramount. Registered nurses have historically provided that care, but now their ability to fulfill their crucial role faces the greatest jeopardy in the history of the profession.... Life Support belongs in the august company of *Silent Spring*, *The Other America*, *The Feminine Mystique*, and other pivotal works with the power to shape the nation's consciousness."—Washington Post "In this enlightening, involving, in-depth book, Gordon interweaves the history and philosophy of nursing with on-the-job observations of three nurses at Boston's Beth Israel Hospital. Gordon lets the nurses speak for themselves, effectively illustrating their commitment to their profession and involving readers in real-life dramas."—Publishers Weekly "For patients, physicians, nurses, and health policy analysts, Gordon's passionate and accessible account of the impact of managed care on skilled nursing provides clear grounds for concern."—Health Affairs In this book, Suzanne Gordon describes the everyday work of three RNs in Boston—a nurse practitioner, an oncology nurse, and a clinical nurse specialist on a medical unit. At a time when nursing is often undervalued and nurses themselves in short supply, *Life Support* provides a vivid, engaging, and intimate portrait of health care's largest profession and the important role it plays in patients' lives. *Life Support* is essential reading for working nurses, nursing students, and anyone considering a career in nursing as well as for physicians and health policy makers seeking a better understanding of what nurses do and why we need them. For the Cornell edition of this landmark work, Gordon has written a new introduction that describes the current nursing crisis and its impact on bedside nurses like those she profiled in the book.

Ethics, Conflict and Medical Treatment for Children E-Book Jul 08 2020 What should happen when doctors and parents disagree about what would be best for a child? When should courts become involved? Should life support be stopped against parents' wishes? The case of Charlie Gard, reached global attention in 2017. It led to widespread debate about the ethics of disagreements between doctors and parents, about the place of the law in such disputes, and about the variation in approach between different parts of the world. In this book, medical ethicists Dominic Wilkinson and Julian Savulescu critically examine the ethical questions at the heart of disputes about medical treatment for children. They use the Gard case as a springboard to a wider discussion about the rights of parents, the harms of treatment, and the vital issue of limited resources. They discuss other prominent UK and international cases of disagreement and conflict. From opposite sides of the debate Wilkinson and Savulescu provocatively outline the strongest arguments in favour of and against treatment. They analyse some of the distinctive and challenging features of treatment disputes in the 21st century and argue that disagreement about controversial ethical questions is both inevitable and desirable. They outline a series of lessons from the Gard case and propose a radical new 'dissensus' framework for future cases of disagreement. This new book critically examines the core ethical questions at the heart of disputes about medical treatment for children. The contents review prominent cases of disagreement from the UK and internationally and analyse some of the distinctive and challenging features around treatment disputes in the 21st century. The book proposes a radical new framework for future cases of disagreement

Major Incident Medical Management and Support Apr 16 2021 The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the preparation, management and support elements of dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.
