The Evolution of Untethered Communications   Aug 22 2019 In response to a request
from the Defense Advanced Research Projects Agency, the committee studied a range of
issues to help identify what strategies the Department of Defense might follow to
meet its need for flexible, rapidly deployable communications systems. Taking into
account the military's particular requirements for security, interoperability, and
other capabilities as well as the extent to which commercial technology development
can be expected to support these and related needs, the book recommends systems and
component research as well as organizational changes to help the DOD field state-of-
the-art, cost-effective untethered communications systems. In addition to advising
DARPA on where its investment in information technology for mobile wireless
communications systems can have the greatest impact, the book explores the evolution
of wireless technology, the often fruitful synergy between commercial and military
research and development efforts, and the technical challenges still to be overcome
in making the dream of "anytime, anywhere" communications a reality.
