Guidelines for Perinatal Care Jan 01 2020 The gold-standard guide from the AAP and ACOG -- newly updated and more valuable than ever! Significantly revised and updated, the new 8th edition of this bestselling manual provides the latest recommendations on quality care of pregnant women, their fetuses, and their newborn infants. Jointly developed by the American Academy of Pediatrics (AAP) and American College of Obstetricians and Gynecologists (ACOG), this unique resource addresses the full spectrum of perinatal medicine from both the obstetric and pediatric standpoints. New in the 8th edition: New section on suggested levels of maternal care from birth centers to Level IV institutions New sections on screening for preterm delivery risk added to chapter on antepartum care New topics covered include the timing of cord clamping, the need (or not) for bedrest, and updates in hypertension Guidance regarding postpartum contraception recommendations has been expanded New section on mosquito-borne illnesses (including Zika) New section on infections with high-risk infection control issues Updated recommendations on neonatal resuscitation, screening and management of hyperbilirubinemia, and neonatal drug withdrawal. Pocket Book of Hospital Care for Children Nov 03 2022 The Pocket Book is for use by doctors nurses and other health workers who are responsible for the care of young children at the first level referral hospitals. This second edition is based on evidence from several WHO updated and published clinical guidelines. It is for use in both inpatient and outpatient care in small hospitals with basic laboratory facilities and essential medicines. In some settings these guidelines can be used in any facilities where sick children are admitted for inpatient care. The Pocket Book is one of a series of documents and tools that support the Integrated Managem.

Implementation of National Pediatric Guidelines to Prevent Chemotherapy Induced Nausea and Vomiting in Children with Cancer Aug 27 2019 Purpose: The purpose of this study was to assess the use of supplemental, as needed (prn) pharmacologic interventions for uncontrolled acute chemotherapy induced nausea and vomiting (CINV) in children with cancer after implementation of new pediatric CINV prophylaxis guidelines. Description of Project: A retrospective chart review was completed on forty-three children admitted to the hospital for chemotherapy during a 3 month period in 2017 to document the use of medications given for acute breakthrough CINV. The pre-implementation group received anti-emetics based on the institutional standard of care. A second retrospective chart review was completed on thirty-three children admitted to the hospital for chemotherapy during a 3 month period in 2018 to evaluate use of medications for acute breakthrough CINV. The post-implementation group received anti-emetics based on the new published pediatric guidelines. Patient characteristics, treatment information, and provider compliance with guidelines were collected. Results/Conclusions: Implementation of the guideline by the institution was successful with 91% of patients in the post-intervention group receiving the new anti-emetic regimen to prevent nausea and vomiting. The mean anti-emetic dose in all patients for breakthrough CINV pre-implementation was 4.837±10.4857. Post-implementation, the mean anti-emetic dose for all patients was 3.394±6.432. This was not statistically significant (p =0.462). For patients under 12, the mean anti-emetic dose pre-implementation was 5.8±12.5333 and post-implementation was 3.882±8.1. This was also not statistically significant (p =0.55). Data collected from this project did demonstrate a decrease in the number of breakthrough anti-emetics used in children under 12 years of age likely related to the addition of the drug aprepitant. Although clinical guidelines provide excellence guidance to clinicians, they must always be evaluated for risk versus benefit; adapted to individual patient circumstances as appropriate; and used within the context of expert clinician judgement.

WHO Guidelines on Drawing Blood Jun 25 2019 Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

The Healing Power of Touch – Guidelines for Nurses and Practitioners Sep 20 2021 This book offers precise and highly informative instructions for nurses and caregivers on how to select external applications for various indications and how to perform them on children. It also enables readers to gain a deeper understanding of the skin, its functions and the therapeutic potential of external applications. The sense of touch is the first sensation that develops in the body during embryonal development; therefore, it is essential for orientation in the world from the beginning of life. The skin is known as the body's protective mantle. It is the largest sensory organ of the human body and plays a key role in perception, social interaction and health. Touch and external applications to the skin can have a lasting effect on overall health and wellbeing and contribute to the healing of various conditions in children. Through the skin, children react sensitively to external influences like natural active ingredients and touch. These mechanisms are particularly relevant with regard to the deep relationship between the skin and the organism as a whole. External applications use these mechanisms to support the health and healing processes in children. The book is intended for healthcare professionals interested in complementing conventional pediatric care with external applications, especially in daily use by nurses and caregivers. Nurses will find guidance from complementary medicine and care to deal with various indications occurring in various pediatric fields like pediatric surgery, psychiatry, oncology, intensive care, neonatology and during the phases of child development. In addition to the detailed descriptions of the application techniques, it provides insights into the theory behind external applications and explains the mechanisms of action. Furthermore, it includes case studies, scientific data and personal reports from experts.

World Health Organization Guidelines on the Pharmacological Treatment of Persisting Pain in Children with Medical Illnesses Mar 15 2021 These guidelines have been developed to support countries to relieve pain in their paediatric populations. These guidelines address persisting pain in children caused by conditions such as cancer, HIV/AIDS, sickle-cell disease, burns, trauma, and phantom limb pain. Recommendations -- developed following a careful and transparent appraisal of available evidence -- are presented for the pharmacological treatment of mild, moderate and severe pain. The guidelines include chapters on the various systems used to classify pain and on the evaluation of pain, which reviews the available tools for routine pain measurement in children. Provision of sustainable pain relief within health care systems is covered in a separate chapter. Since morphine and other opioid analgesics -- required for the relief of moderate-to-severe pain in children -- are listed under the 1961 UN Single Convention on Narcotic Drugs, the new guidelines include an annex explaining the Convention's requirements for the handling and procurement of opioid analgesics for the relief of pain.

Pediatric Procedural Adaptations for Low-Resource Settings Oct 10 2020 Despite global advancements in pediatric medicine, technologies which have become standard-of-care in high-resource settings are unavailable in low-and middle-income countries due to cost, availability, or challenges maintaining equipment. This book compiles evidence-based and expert clinical procedural adaptations in an approachable, case-based, step-by-step guide, aimed to provide educational support for healthcare providers practicing in resource-limited settings. This responds to both the high demand for this content and the importance of gathering experts across continents and pediatric disciplines. Each chapter provides both a theoretical framework and practical discussion of high-yield procedural adaptations. Leading international researchers and seasoned clinicians with expertise using these adaptations were selected by the editors as authors. Chapters include an example case with adaptation use and detailed instructions including supplies, indications, risks, and benefits. Content is grounded in current best practice recommendations and evidence-based research. Highlighted by the COVID-19 pandemic, a mature understanding of pathophysiology and device design/safety is required when providing care in low-resource settings or in crisis times. In-person instruction

is not always feasible. Written and virtual platforms remain critical in disseminating high-yield, practical content. This book is not a substitute for appropriate procedural training, though is easily modified to meet the educational needs of diverse learner groups. It is a valuable resource for appropriately trained practitioners practicing in accordance with local guidelines. Knowledge and fluency with pediatric procedural adaptations is critical in efforts to reduce global inequities and pediatric morbidity/mortality in low-resource settings.
