Understanding Human Development Mar 03 2020 K. Warner Schaie I am pleased to write a foreword for this interesting volume, particularly as over many years, I have had the privilege of interacting with the editors and a majority of the contributors in various professional roles as a colleague, mentor, or research collaborator. The editors begin their introduction by asking why one would want to read yet another book on human development. They immediately answer their question by pointing out that many developmentally oriented texts and other treatises neglect the theoretical foundations of human development and fail to embed psychological constructs within the multidisciplinary context so essential to understanding development. This volume provides a positive remedy to past deficiencies in volumes on human development with a well-organized structure that leads the reader from a general introduction through the basic processes to methodological issues and the relation of developmental constructs to social context and biological infrastructure. This approach does not surprise. After all, the editors and most of the contributors at one time or another had a connection to the Max Planck Institute of Human Development in Berlin, whether as students, junior scientists, or senior visitors. That institute, under the leadership of Paul Baltes, has been instrumental in pursuing a systematic lifespan approach to the study of cognition and personality. Over the past two decades, it has influenced the careers of a generation of scientists who have advocated long-term studies of human development in an interdisciplinary context.

Democratic Accountability and International Human Development Aug 20 2021 Scholars and policymakers have long known that there is a strong link between human development and spending on key areas such as education and health. However, many states still neglect these considerations in favour of competing priorities, such as expanding their armies. This book examines how states arrive at these decisions, analysing how democratic accountability influences public spending and impacts on human development. The book shows how the broader paradigm of democratic accountability - extending beyond political democracy to also include bureaucratic and judicial institutions as well as taxation and other modes of resource mobilisation - can best explain how states allocate public resources for human development. Combining cross-country regression analysis with exemplary case studies from Pakistan, India, Botswana and Argentina, the book demonstrates that enhancing human capabilities requires not only effective party competition and fair elections, but also a particular nesting of public organisational structures that are tied to taxpaying citizens in an undisturbed chain of accountability. It draws out vital lessons for institutional design and our approach to the question of human development, particularly in the less developed states. This book will be of great interest to postgraduate students and researchers in the fields of political economy, public policy, governance, and development. It also provides valuable insights for those working in the international relations field, including inside major aid and investment organisations.

[Sri Aurobindo's Vision of Integral Human Development](#) Mar 15 2021 This book explores the integral vision of human development contained in the original works of Sri Aurobindo and The Mother. It delves into multiple layers of the human personality as envisaged by Sri Aurobindo and The Mother and explores a new developmental science of consciousness based on the practice of Integral Yoga. The book examines the major metatheoretical conceptions that shape the contemporary discipline of developmental psychology and discusses the ways in which Sri Aurobindo's philosophical and psychological perspective can help break fresh ground for developmental theorisation and research by extending the current understanding of the human evolutionary potential. The author proposes a new agenda for human development which brings together the key ideas of integral individual and collective development and informs practices in the areas of counselling, education, parenting and self-development. This book will be of special interest for researchers of developmental psychology, human development, counselling psychology, philosophy, social work and education.

Economic Complexity and Human Development Jul 19 2021 This book combines the human development approach and innovation economics in order to explore the effects that structural economic change has on human development. While economic diversification can provide valuable new social choices and capabilities, it also tends to lead to more complex decision processes and changes to the set of capabilities required by

people to self-determine their future. Within this process of structural transformation, social networks are crucial for accessing information and social support, but networks can also be a root cause of exclusion and inequality reproduction. This implies the need to encourage innovation and economic diversification beyond production expansion, focusing on the promotion of human agency and social inclusion. This book provides such a modern perspective on development economics, emphasizing the role of social networks, economic diversity and entrepreneurship for social welfare. The author discusses how innovation, social networks, economic dynamics and human development are interlinked, and provides several practical examples of social and micro-entrepreneurship in contexts as diverse as Peruvian rural villages and Brazil's urban areas. The interdisciplinary perspective put forward in this book illustrates theoretical and methodological methods of exploring the complexity of development in a practical and relevant way. It also provides useful information about structural factors which need to be considered by practitioners when designing pro-poor growth policies. Furthermore, the coverage of the core concepts of innovation, networks and development economics, enriched with multiple examples, makes it a valuable resource for scholars and advanced students of modern development economics.

The Dynamics of Human Development Feb 11 2021 This book studies the dynamic aspects of the Human Development Index (HDI) through a partial mobility perspective. It offers a new axiomatic structure and a set of mobility indices to discuss partial trends and interrogate the human development status at the subgroup and subregional levels. While traditional human development theories are primarily concerned with static distributions corresponding to a point in time, this book looks at an oft-neglected side of HDI and focuses on relative changes in human development that may not be captured by the absolutist framework. In addition, the authors also introduce the concepts of jump and fractional mobility which aid in tracking the development and stagnation among various groups within a population. This work breaks fresh ground in the study of human development. It will be of great interest to scholars and researchers of economics, development economics, political economy, and development practitioners.
