Advances in Computing Science - ASIAN 2000 Mar 02 2020 The Asian Computing Science Conference (ASIAN) series was initiated in 1995 to provide a forum for researchers in computer science in Asia to meet and to promote interaction with researchers from other regions. The previous 7ve conferences were held, respectively, in Bangkok, Singapore, Kathmandu, Manila, and Phuket. The proceedings were published in the Lecture Notes in Computer Science Series of Springer-Verlag. This year's conference (ASIAN2000) attracted 61 submissions from which 18 papers were selected through an electronic program committee (PC) meeting. The themes for this year's conference are: - Logics in Computer Science - Data Mining - Networks and Performance The key note speaker for ASIAN2000 is Jean Vuillemin (ENS, France) and the invited speakers are Ramamohanarao Kotagiri (U. Melbourne, Australia) and Alain Jean-Marie (LIRMM, France). We thank them for

accepting our - vitation. This year's conference is sponsored by the Asian Institute of Technology (Thailand), INRIA (France), the National University of Singapore (Singapore), and UNU/IIST (Macau SAR, China). We thank all these institutions for their continued support of the ASIAN series. This year's conference will be held in Penang, Malaysia. We are much obliged to Universiti Sains Malaysia and Penang State Government for providing the conference venue and to Dr. Abdullah Zawawi Haji Talib for making the local arrangements. We also wish to thank the PC members and the large number of referees for the substantial work put in by them in assessing the submitted papers.

Memory Systems and Pipelined Processors Aug 07 2020 The current widespread demand for high performance personal computers and workstations has resulted in a renaissance of computer design. To meet the challenge that this presents to students and professional computer architects, this graduate level text offers an in-depth treatment of the implementation details of memory systems and pipelined processors, the "microarchitecture" of modern computers and microprocessors. The text explores techniques for solving the design problems inherent in computers with high levels of concurrency, such as the demand for a memory system with low latency and high bandwidth, branching, providing precise interrupts, managing dependencies and insuring coherency. Additionally, it examines the difficulties presented by virtual memory in high performance computers. As a thorough compendium of both historical and contemporary implementation techniques, this is an essential sourcebook for computer architecture students and practicing professionals.
