**Risk** Aug 10 2020 From the bestselling author of *Team of Teams* and *My Share of the Task*, an entirely new way to understand risk and master the unknown. Retired four-star general Stan McChrystal has lived a life associated with the deadly risks of combat. From his first day at West Point, to his years in Afghanistan, to his efforts helping business leaders navigate a global pandemic, McChrystal has seen how individuals and organizations fail to mitigate risk. Why? Because they focus on the probability of something happening instead of the interface by which it can be managed. In this new book, General McChrystal offers a battle-tested system for detecting and responding to risk. Instead of defining risk as a force to predict, McChrystal and coauthor Anna Butrico show that there are in fact ten dimensions of control we can adjust at any given time. By closely monitoring these controls, we can maintain a healthy Risk Immune System that allows us to effectively anticipate, identify, analyze, and act upon the ever-present possibility that things will not go as planned. Drawing on examples ranging from military history to the business world, and offering practical exercises to improve preparedness, McChrystal illustrates how these ten factors are always in effect, and how by considering them, individuals and organizations can exert mastery over every conceivable sort of risk that they might face. We may not be able to see the future, but with McChrystal's hard-won guidance, we can improve our resistance and build a strong defense against what we know—and what we don't.

**P-38 Lightning Pilot's Flight Operating Instructions** Feb 25 2022 Originally designed as a high-altitude interceptor, the P-38 was the first U.S. fighter of WWII to compare with the Spitfire and Me-109. The twin-tailed, single seat "Fork Tailed Devil" carried four .50-caliber machine guns and a 20mm cannon, and could fly at speeds above 400 mph. An extremely successful design, it was the primary long-range fighter for the Army Air Force until the appearance of the P-51 Mustang. It also produced devastating results in the ground attack mission. Over 9500 Lightnings were built by V-J day in 1945, including reconnaissance and pathfinder variants. Originally printed by Lockheed and the U.S. Army Air Force in 1944, this Pilot's Flight Operating Handbook taught pilots everything they needed to know before entering the cockpit. Classified "Restricted," the manual was declassified and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

**T-38 Talon Pilot's Flight Operating Instructions** Nov 05 2022 Northrop's T-38 Talon was the world's first supersonic trainer aircraft, and remains in service today in air forces worldwide. It entered service in 1961, and quickly set climb records, earning it the nickname "white rocket". Nearly 1200 Talons were produced before the last one rolled off the assembly line in 1972. Capable of a speed of Mach 1.3, and a climb rate approaching 34,000 feet per minute, the T-38's performance was sufficient to warrant service as the USAF Thunderbirds' aircraft in the mid-1970s. Its primary role however, was as a dedicated training and proficiency platform. More than 50,000 USAF, NASA and NATO pilots have flown the Talon, a record that may never be matched. Originally printed by the U.S. Air Force and Northrop, this handbook for the T-38 provides a fascinating glimpse inside the cockpit of this famous aircraft. Originally classified "restricted", the manual was recently declassified and is here reprinted in book form.
