**Contemporary Military Reserves** Mar 28 2022 This book offers a comparative study of military reserves in contemporary democracies. A combination of budgetary pressures, new missions and emerging military roles during the past three decades has led the armed forces of democracies to rethink the training and use of reserve forces. Moreover, reservists have become central to the armed forces as part of moves towards "total" or "comprehensive" defense. Despite this, a scholarly bias towards studying regulars and conscripts means that reservists and reserve soldiers continue to receive only marginal attention. This volume fills that lacuna through a series of country studies examining how best to understand the peculiarities of reservist service. In contrast to regulars and conscripts, reservists are marked by their dual management of civilian and military careers, different family dynamics, diverse motivations and commitment to the armed forces, the material and non-material incentives they are offered, and their place in the political sphere. This volume suggests two frames to make sense of such differences: first, it looks at reservists as "transmigrants" traveling between the military and civilian worlds; and, second, it analyzes the multiple informal "contracts" and negotiations that bind them to the military. All the chapters adopt these conceptualizations, granting the volume a common focus and integrative frame. The volume will be of much interest to students of military and strategic studies, civil-military relations, sociology and International Relations.

**The IT Service Part 2 - The Handbook** Jun 30 2022 Since the early 2000s numerous external scenarios and drivers have added significant pressures upon the IT organisations. Among many, these include: Regulatory compliance: data privacy requirements and corporate scandals have focused a requirement for transparency - with high impact on IT organisations Economic pressures: require IT organisations to more closely align with business imperatives. The outcome has been an explosion of 'standards' and 'frameworks' each designed to support the IT organisation as it demonstrates to the world that they are the 'rock' of an organisation: strong, reliable, effective and efficient. Most of these standards and frameworks have great elements but no organisation can adopt them all - and many were created without sufficient considerations for interoperability. The IT Service (in 2 parts) looks at the key and very simple goals of an IT organisation and clearly and succinctly presents to the reader the best 'rock solid' elements in the Industry. It then shows how all the key elements can easily 'crystallise' together -with great templates and check-lists. In Part 1 (another book) the reader is presented with the simple objectives that the IT department really must address. In Part 2 (this book) the reader gains expert advice on how the components of IT Service are 'crystallised' in a real environment. There's a delightfully simple set of steps: OVERVIEW OF THE SERVICE DESIGN PACKAGE THE SERVICE STRATEGY ASPECTS OF SERVICE DESIGN OUTPUTS OF THE SERVICE DESIGN PHASE OUTPUTS OF THE SERVICE TRANSITION PHASE OUTPUTS OF THE SERVICE OPERATION PHASE Within these the Author gives a very simple set of templates (or tells you where they are to be found), practical guidance and very simple checklists. It's up to the reader how far you develop each stage: a lot depends on the nature of your business of course. The joy of this approach is that the reader knows that all basic components are identified -- and that more extensive resources are referred to if the reader wishes to extend.

*Soft Computing Applications* Aug 09 2020 These volumes constitute

the Proceedings of the 6th International Workshop on Soft Computing Applications, or SOFA 2014, held on 24-26 July 2014 in Timisoara, Romania. This edition was organized by the University of Belgrade, Serbia in conjunction with Romanian Society of Control Engineering and Technical Informatics (SRAIT) - Arad Section, The General Association of Engineers in Romania - Arad Section, Institute of Computer Science, Iasi Branch of the Romanian Academy and IEEE Romanian Section. The Soft Computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness and low solution cost. Soft computing facilitates the use of fuzzy logic, neurocomputing, evolutionary computing and probabilistic computing in combination, leading to the concept of hybrid intelligent systems. The combination of such intelligent systems tools and a large number of applications introduce a need for a synergy of scientific and technological disciplines in order to show the great potential of Soft Computing in all domains. The conference papers included in these proceedings, published post conference, were grouped into the following area of research: · Image, Text and Signal Processing Intelligent Transportation Modeling and Applications Biomedical Applications Neural Network and Applications Knowledge-Based Technologies for Web Applications, Cloud Computing, Security, Algorithms and Computer Networks Knowledge-Based Technologies Soft Computing Techniques for Time Series Analysis Soft Computing and Fuzzy Logic in Biometrics Fuzzy Applications Theory and Fuzzy Control Business Process Management Methods and Applications in Electrical Engineering The volumes provide useful information to professors, researchers and graduated students in area of soft computing techniques and applications, as they report new research work on challenging issues.
