Targeted Muscle Reinnervation Jul 29 2019 *Implement TMR with Your Patients and Improve Their Quality of Life* Developed by Dr. Todd A. Kuiken and Dr. Gregory A. Dumanian, targeted muscle reinnervation (TMR) is a new approach to accessing motor control signals from peripheral nerves after amputation and providing sensory feedback to prosthesis users. This practical approach has many advantages over other neural-machine interfaces for the improved control of artificial limbs. *Targeted Muscle Reinnervation: A Neural Interface for Artificial Limbs* provides a template for the clinical implementation of TMR and a resource for further research in this new area of science. After describing the basic scientific concepts and key principles underlying TMR, the book presents surgical approaches to transhumeral and shoulder disarticulation amputations. It explores the possible role of TMR in the prevention and treatment of end-neuromas and details the principles of rehabilitation, prosthetic fitting, and occupational therapy for TMR patients. The book also describes transfer sensation and discusses the surgical and functional outcomes of the first several TMR patients. It concludes with emerging research on using TMR to further improve the function and quality of life for people with limb loss. With contributions from renowned leaders in the field, including Drs. Kuiken and Dumanian, this book is a useful guide to implementing TMR in patients with high-level upper limb amputations. It also supplies the foundation to enable improvements in TMR techniques and advances in prosthetic technology.

Return-to-Play after Lower Limb Muscle Injury in Football May 07 2020 Return to training (RTT) and return to play (RTP) decisions making process in football are currently based on expert's opinion. However, there are no consensus guidelines on evidence-based decision-making. This book provides a framework for evidence-based decision-making both in RTT and RTP following lower-limb muscle injuries sustained in football. Based on the "Italian Consensus Conference (2019) on return-to-play after lower limb muscle injury in football", it provides a list of RTT and RTP criteria after such injuries compiled by orthopedic surgeons, sports physicians, radiologists, rehabilitation physicians, sport physiologists, general surgeons, family physicians, physiotherapists, physical trainers and psychologists working in elite football in Italy. The book identifies the main criteria for RTT and RTP following injuries involving the most important muscle groups, i.e. quadriceps, hamstring, hip adductor, hip external rotator, iliopsoas and soleus-gastrocnemius. As such it is a valuable reference resource for practitioners making RTT and RTP decisions making process.
