Wireless Communication in Underground Mines Oct 15 2021 Wireless communication has emerged as an independent discipline in the past decades. Everything from cellular voice telephony to wireless data transmission using wireless sensor networks has profoundly impacted the safety, production, and productivity of industries and our lifestyle as well. After a decade of exponential growth, the wireless industry is one of the largest industries in the world. Therefore, it would be an injustice if the wireless communication is not explored for mining industry. Underground mines, which are characterized by their tough working conditions and hazardous environments, require fool-proof mine-wide communication systems for smooth functioning of mine workings and ensuring better safety. Proper and reliable communication systems not only save the machine breakdown time but also help in immediate passing of messages from the vicinity of underground working area to the surface for day-to-day normal mining operations as well as for speedy rescue operations in case of disaster. Therefore, a reliable and effective communication system is an essential requisite for safe working, and maintaining requisite production and productivity of underground mines. Most of the existing systems generally available in underground mines are based on line (wired) communication principle, hence these are unable to withstand in the disaster conditions and difficult to deploy in inaccessible places. Therefore, wireless communication is an indispensable, reliable, and convenient system and essential in case of day-to-day normal duty or disaster situations.

The City and the Sea Feb 25 2020 In a crumbling neighbourhood in New Delhi, a child waits for a mother to return home from work. And, in parallel, in a snow-swept town in Germany on the Baltic Sea coast a woman, her memory fading, shows up at a deserted hotel. Worlds apart, both embark, in the course of that night, on harrowing journeys through the lost and the missing, the living and the dead, until they meet in an ending that breaks the heart - and holds the promise of putting it back together again. Called the novelist of the newsroom, Raj Kamal Jha cleaves open India's tragedy of violence against women with a powerful story about our complicity in the culture that supports it. This is a book about masculinity - damaging and toxic and yet enduring and entrenched - that begs the question: What kind of men are our boys growing up to be?

If You Are Afraid of Heights Jan 26 2020 Written in Jha's exquisitely crafted and beautiful, precise prose, *If You Are Afraid of Heights* offers the reader a glimpse into a looking-glass world where nothing is quite what it seems and yet everything is strangely familiar. A man and a woman meet in a midnight road accident and fall in love. A reporter arrives in a small town to uncover the story of a child's rape and murder. A young girl, shaken by a series of suicides in her neighbourhood, worries for her parents' safety. Three seemingly separate stories, and yet interwoven themes and recurring motifs suggest a connection between the strands: a crow flying overhead, a sky-scraper larger than any built before, a dog missing part of its tail, a news report . . . In a novel that defies categorisation, Jha tackles issues of abuse, neglect, and the power of hope: *If You Are Afraid of Heights* is about the private journeys that people take in their minds; about imaginations fuelled by the images and narratives of a city. The result is a breathtaking odyssey that draws you deep into the uncharted zone between fantasy and reality, deep into the longings and secrets of human lives.
