**The Ethical Challenges of Academic Administration** Jul 07 2020 This book is an invitation to academic administrators, at every level, to engage in reflection on the ethical dimensions of their working lives. Academics are very good at reflecting on the ethical issues in other professions but not so interested in reflecting on those in their own, including those faced by faculty and administrators. Yet it is a topic of great

importance. Academic institutions are value-driven; hence virtually every decision made by an academic administrator has an ethical component with implications for students, faculty, the institution, and the broader community. Despite this, they receive little systematic preparation for this aspect of their professional lives when they take up administrative posts, especially when compared to, say, medical or legal training. Surprisingly little has been written about the ethical challenges that academic administrators are likely to face. Most of the literature relating to academic administration focuses on “leadership” and draws heavily on management and social science theory. The importance of focusing on ethical deliberation and decision-making often goes unrecognized.

Application Administrators Handbook Nov 03 2022 An application administrator installs, updates, optimizes, debugs and otherwise maintains computer applications for an organization. In most cases, these applications have been licensed from a third party, but they may have been developed internally. Examples of application types include enterprise resource planning (ERP), customer resource management (CRM), and point of sale (POS), legal contract management, time tracking, accounts payable/receivable, payroll, SOX compliance tracking, budgeting, forecasting and training. In many cases, the organization is absolutely dependent that these applications be kept running. The importance of application administrators and the level to which organizations depend upon them is easily overlooked. Application Administrators Handbook provides an overview of every phase of administering an application, from working with the vendor before installation, the installation process itself, importing data into the application, handling upgrades, working with application users to report problems, scheduling backups, automating tasks that need to be done on a repetitive schedule, and finally retiring an application. It provides detailed, hands-on instructions on how to perform many specific tasks that an application administrator must be able to handle. Learn how to install, administer and maintain key software applications throughout the product life cycle Get detailed, hands-on

instructions on steps that should be taken before installing or upgrading an application to ensure continuous operation Identify repetitive tasks and find out how they can be automated, thereby saving valuable time Understand the latest on government mandates and regulations, such as privacy, SOX, HIPAA, PCI, and FISMA and how to fully comply
