Parameter Extraction and Complex Nonlinear Transistor Models Oct 26 2019 All model parameters are fundamentally coupled together, so that directly measured individual parameters, although widely used and accepted, may initially only serve as good estimates. This comprehensive resource presents all aspects concerning the modeling of semiconductor field-effect device parameters based on gallium-arsenide (GaAs) and gallium nitride (GaN) technology. Metal-semiconductor field-effect transistors (MESFETs), high electron mobility transistors (HEMTs) and heterojunction bipolar transistors (HBTs), their structures and functions, and existing transistor models are also classified. The Shockley model is presented in order to give insight into semiconductor field-effect transistor (FET) device physics and explain the relationship between geometric and material parameters and device performance. Extraction of trapping and thermal time constants is discussed. A special section is devoted to standard nonlinear FET models applied to large-signal measurements, including static-/pulsed-DC and single-/two-tone stimulation. High power measurement setups for signal waveform measurement, wideband source-/load-pull measurement (including envelope source-/load pull) are also included, along with high-power intermodulation distortion (IMD) measurement setup (including envelope load-pull). Written by a world-renowned expert in the field, this book is the first to cover of all aspects of semiconductor FET device modeling in a single volume.

Farthest North (The Complete Two-Volume Edition) Aug 17 2021 The memoirs by Fridtjof

Nansen tell about the epoch-making attempt to reach the North Pole, which ended in the farthest northern journey in the history of his time. Fridtjof Nansen had an extraordinary idea of how to get to the North Pole by ship. After discovering that the remains of the boat, wrecked near Russian Siberia, were found in the Northern Atlantic, he presumed that there should be some drift through the North Pole. So, he developed a specifically customized ship that was frozen into an ice cube and crossed the Polar waters in this shape. The vessel did freeze successfully. Yet, the journey was too long, and Nansen left the ship to reach the Pole on skis. He and his companion Hjalmar Johansen left for the pole but didn't manage to get it. However, they were the first people to achieve the farthest north latitude of 86°13.6′N. The story tells about this challenging journey through snow and waters makes a unique record of one of the most incredible northern expeditions.

New Faces of Harbour Cities May 14 2021 New Faces of Harbour Cities explores the changing so-called "faces" of harbour cities. Whilst urban regeneration and harbour cities are discussed as related realms within the wider field of urban competitiveness, few studies have attempted to give place to the broader set of economic, social, legal, environmental and cultural dimensions of urban waterfront regeneration in harbour cities concerning not only Western and Northern Europe, but also Aegean and Mediterranean cities. The book provides a multi-disciplinary, yet holistic analysis of the port-city interface as a major goal of creating new domains of entrepreneurial activity. Offering noteworthy potential, the abandonment of port districts offers new opportunities in placing brownfield port areas back into public use through their comprehensive revitalization. With the rapid growth of special interest in the waterfront regeneration of port districts, many harbour cities in the world are making an effort to give their cities a brand new "face". However, there are still specific cases showing that this goal may not always find success, as is discussed for various cities in this book. Key features of the book include a highly readable discussion of the relationship between urban waterfront regeneration and port cities that both address to the evolution of the port-city interface and contemporary patterns of activity. The book also includes a wide range of international

case studies in both developed and developing cities, whilst providing a balanced view of the critical issues and related cases. While focusing on key themes, the discussion also considers the critique of issues such as risk management, legal challenges in planning and the balance between the need for logistic activities and brownfield regeneration of port districts as a major asset in terms of urban image. As such, New Faces of Harbour Cities will serve as an important reference to academic studies that explore key themes such as urban waterfront regeneration, brownfield development, the port-city interface, green energy, mixed-use regeneration, and legal aspects in planning.

<u>Bari 1943: the second Pearl Harbor</u> May 26 2022 The night bombardment of Bari on December 2nd, 1943 was a dramatic action carried out at low altitude by Luftwaffe aircraft, with the aim of attacking the transport ships of an important convoy that was in the port under unloading in the docks, and that had been reported in the morning by the German air reconnaissance. Bari had been reached by British troops on September 11th following the events of Italy's surrender, and most of the supplies that flowed there were destined for General Montgomery's 8th Army, and for the US Air Force whose heavy bombers of the 15th Air Force had installed themselves in the airports of Puglia, in particular Foggia, to beat German targets in Germany and the Balkans from the south. On the

evening of December 2nd, 105 Junker 88 bombers from six bombing groups took off from the airports of northern Italy and 88 of them attacked the target with disastrous effects for the Allies, success achieved with the loss of two Ju. 88. The attack caused heavy losses to the Anglo-Americans, who had not suffered such a devastating surprise air raid since the Japanese attacked the U.S. fleet at Pearl Harbor on December 7th, 1941. The ships sunk in Bari, including those of small tonnage, were 21 and another 12 more or less damaged. The wrecks of the sunken ships caused the blockade of the port for three weeks, with the result that the Anglo-Americans had to use the ports of Brindisi and Taranto to land and air supplies, in order not to delay the advance in Italy. Particularly serious and alarming was the sinking by explosion of the ammunition cargo of the American Liberty ship John Harvey, which also carried 2,000 deadly mustard bombs for 1,350 tons, from whose holds leaked a large quantity of chemicals of that deadly toxic gas, which not only contaminated the waters of the port but killed more than 1,000 soldiers and civilians in the area, which represented one of the greatest ecological disasters of all time.
