History of Electric Cars Aug 08 2020 One hundred years ago electric cars were the most popular automobiles in the world. In the late nineteenth century and at the start of the twentieth century, they outsold every other type of car. And yet, within a couple of decades of the start of the twentieth century, the electric car had vanished. Thousands of battery-powered cars disappeared from the streets, replaced by the internal combustion engine, and their place in the history of the automobile was quietly erased. A century later, electric cars are making a comeback. Fears over pollution and global warming have forced manufacturers to reconsider the electric concept. A History of Electric Cars presents for the first time the full story of electric cars and their hybrid cousins. It examines how and why electric cars failed the first time - and why today's car manufacturers must learn the lessons of the past if they are to avoid repeating previous mistakes all over again. The book examines in detail: Early vehicles such as the Lohner-Porsche petrol-electric hybrid of 1901; Key figures in the history of the electric car development such as Henry Ford; Sir Clive Sinclair's plans to build a number of electric vehicles, designed to sit alongside the Sinclair C5; The return of the electric technology to vehicles as diverse as the NASA Lunar Rover, commuting vehicles and supercars; Future developments in electric cars. For the first time the full story of electric cars and their hybrids are examined. The hidden past of the electric automobile is uncovered and its future developments are discussed. Superbly illustrated with 300 colour photographs, many of which are rare and original sketch designs. Nigel Burton has written and lectured on cars and automotive history for more than twenty years.

Toyota MR2, 1984-1997 Nov 22 2021 The original MR2 had flat panels and sharp edges and was not the prettiest of cars. But with its all-round MacPherson strut suspension it handled well and with a twin-cam 1.6-litre 16-valve engine developing 122bhp it was fast too. It was a sales success. Five years later the car was replaced by one with the same designation but the styling was more rounded. By now it had better performance and a choice of engines ranging from 119bhp to 158bhp versions of the 2-litre 16-valve twin-cam. Later came the 245bhp Turbo. This is a book of contemporary road and comparison tests, specification and technical data, new model introductions, driver's impressions, long-term tests, buying second hand. Cover the CoupT, T-Bar, GT, Turbo, Supercharged.
