**Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles** Feb 25 2022 The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. **Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles** estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

**Electronic Transmission Controls** Apr 17 2021 The evolution of the automotive transmission has changed rapidly in the last decade, partly due to the advantages of highly sophisticated electronic controls. This evolution has resulted in modern automatic transmissions that offer more control, stability, and convenience to the driver. **Electronic Transmission Controls** contains 68 technical papers from SAE and other international organizations written since 1995 on this rapidly growing area of automotive electronics. This book breaks down the topic into two sections. The section on Stepped Transmissions covers recent developments in regular and 4-wheel drive transmissions from major auto manufacturers including DaimlerChrysler, General Motors, Toyota, Honda, and Ford. Technology covered in this section includes: smooth shift control; automatic transmission efficiency; mechatronic systems; fuel saving technologies; shift control using information from vehicle navigation systems; and fuzzy logic control. The section on Continuously Variable Transmissions presents papers that demonstrate that CVTs offer better efficiency than conventional transmissions. Technologies covered in this section include: powertrain control; fuel consumption improvement; development of a 2-way clutch system; internal combustion engines with CVTs in passenger cars; control and shift strategies; and CVT application to hybrid powertrains. The book concludes with a chapter on the future of electronic transmissions in automobiles.

*Use Today's Technician: Automatic Transmissions &* Oct 04 2022 The Today's Tech format has been well received since its launch in the 1990s. With each new edition, incremental improvements have been made to the textbook's content, in-text pedagogy and instructor supplements. Achieving a high level of technical accuracy is an especially high priority, since early editions were not consistently accurate. The Fifth Edition of TT ATT will adhere to the new Today's Tech 5e Series guidelines (see below for details). In addition, NATEF's 2008 task list will be reflected in the job sheets in the shop manual. The major new trend in the field is increasing importance of electronic automatic transmissions. Hybrid transmissions also require greater coverage. The importance of robust instructor packages is not new but takes new shapes as instructional technologies

evolve and become more integral to the teaching process. For the 5e, we will offer the now-standard Instructor Resource components (PPT slides, CTBs, image libraries, interactive jobsheets and NATEF/ASE correlation grids) and a separate, saleable BlackBoard WebTutor Advantage.
