The Soul of Anime Mar 12 2021 In *The Soul of Anime*, Ian Condry explores the emergence of anime, Japanese animated film and television, as a global cultural phenomenon. Drawing on ethnographic research, including interviews with artists at some of Tokyo's leading animation studios—such as Madhouse, Gonzo, Aniplex, and Studio Ghibli—Condry discusses how anime's fictional characters and worlds become platforms for collaborative creativity. He argues that the global success of Japanese

animation has grown out of a collective social energy that operates across industries—including those that produce film, television, manga (comic books), and toys and other licensed merchandise—and connects fans to the creators of anime. For Condry, this collective social energy is the soul of anime.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles Aug 29 2022

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles evaluates various technologies and methods that could improve the fuel economy of medium- and heavy-duty vehicles, such as tractor-trailers, transit buses, and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles, which account for about 26 percent of the transportation fuel used in the U.S. The miles-per-gallon measure used to regulate the fuel economy of passenger cars. is not appropriate for medium- and heavy-duty vehicles, which are designed above all to carry loads efficiently. Instead, any regulation of medium- and heavy-duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers, such as gallons per ton-mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load-specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor-trailers could lower their fuel consumption by up to 20 percent by 2020, and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently, such as garbage trucks and transit buses, by as much 35 percent in the same time frame.
