**Strategic Culture, Securitisation and the Use of Force** Nov 21 2021 This book investigates, and explains, the extent to which different liberal democracies have resorted to the use of force since the 9/11 terrorist attacks. The responses of democratic states throughout the world to the September 2001 terrorist attacks have varied greatly. This book analyses the various factors that had an impact on decisions on the use of force by governments of liberal democratic states. It seeks to explain differences in the security policies and practices of Australia, Canada, France, Germany and the UK regarding the war in Afghanistan, domestic counterterrorism measures and the Iraq War. To this end, the book combines the concepts of strategic culture and securitisation into a theoretical model that disentangles the individual structural and agential causes of the use of force by the state and sequentially analyses the impact of each causal component on the other. It argues that the norms of a strategic culture shape securitisation processes of different expressions, which then bring about distinct modes of the use of force in individual security policy decisions. While governments can also deviate from the constraints of a strategic culture, this is likely to encounter a strong reaction from large parts of the population which in turn can lead to a long-term change in strategic culture. This book will be of much interest to students of strategic culture, securitisation, European politics, security studies and IR in general.

**Ars?ma and His World: the Bodleian Letters in Context** Oct 21 2021 During the Second World War the Bodleian Library in Oxford acquired a set of Aramaic letters, eight sealings, and the two leather bags in which the sealed letters were once stored.

The letters concern the affairs of Ars?ma, satrap of Egypt in the later fifth century. Taken with other material associated with him (mostly in Aramaic, Demotic Egyptian, and Akkadian), they illuminate the Achaemenid world of which Ars?ama was a privileged member and evoke a wide range of social, economic, cultural, organizational, and political perspectives, from multi-lingual communication, storage and disbursement of resources, and satrapal remuneration, to cross-regional ethnic movement, long-distance travel, religious practice, and iconographic projection of ideological messages. Particular highlights include a travel authorization (the only example of something implicit in numerous Persepolis documents), texts about the religious life of the Judean garrison at Elephantine, Ars?ma's magnificent seal (a masterpiece of Achaemenid glyptic, inherited from a son of Darius I), and echoes of temporary disturbances to Persian management of Egypt. But what is also impressive is the underlying sense of systematic coherence founded on and expressed in the use of formal, even formalized, written communication as a means of control. The Ars?ma dossier is not alone in evoking that sense, but its size, variety, and focus upon a single individual give it a unique quality. Though this material has not been hidden from view, it has been insufficiently explored: it is the purpose of the three volumes of Ars?ma and his World: The Bodleian Letters in Context to provide the fullest presentation and historical contextualization of this extraordinary cache yet attempted. Volume I presents and translates the letters alongside a detailed line-by-line commentary, while Volume II reconstructs the two seals that made the clay bullae that sealed the letters, with special attention to Ars?ma's magnificent heirloom seal. Volume III comprises a series of thematic essays which further explore the administrative, economic, military, ideological, religious, and artistic environment to which Ars?ma and the letters belonged.

**User Guidance in Business Process Modelling** Sep 27 2019 Business process modelling is referred to as a complex, time-consuming, and error-prone task. The correction and improvement of badly designed process models becomes increasingly expensive in the later phases of the process management life cycle. This thesis develops the principles of guided process modelling and provides a contribution towards simplifying process modelling activities. The general research question this thesis answers is what are the difficulties in the usage of process modelling tools and which methods, techniques, and tools can guide users in modelling processes to target the existing problems. The question is addressed by following a research methodology of design sciences. Amongst others, it includes a detailed analysis of the research problem, a definition of the objective, the design and development of solutions, and an evaluation of the developed concepts. In summary, the thesis presents innovative concepts to support modellers and provides a step towards end-user enablement in process modelling.

**Canada the Good** Jun 16 2021 To invest in vice can be a sound financial decision, but despite the lure of healthy profits, individuals and mutual funds have been reluctant to invest in this type of stock. After all, who would take pride in supporting the tobacco industry, knowing it sells a deadly product? And what social responsibilities do investors bear with respect to compulsive gamblers who have lost so much money that suicide becomes an attractive option? Canada the Good considers more than five hundred years of debates and regulation that have conditioned Canadians' attitudes towards certain vices. Early European settlers implemented a Christian moral order that regulated sexual behaviour, gambling, and drinking. Later, some transgressions were diagnosed as health issues that required treatment. Those who refused the label of illness argued that behaviours formerly deemed as vices were within the range of normal human behaviour. This historical synthesis demonstrates how moral regulation has changed over time, how it has shaped Canadians' lives, why some debates have almost disappeared and others persist, and why some individuals and groups have felt empowered to tackle collective social issues. Against the background of the evolution of the state, the enlargement of the body politic, and mounting forays into court activism, the author illustrates the complexity over time of various forms of social regulation and the control of vice.

**China's Sustainable Use of Natural Resources** Apr 02 2020 This book examines China's resource endowment and the country's current exploitation and use of resources and analyzes the main challenges and potential opportunities facing the country. It then discusses how to improve the efficiency with which resources are used by taking a 'full-life-cycle' approach to resource use. After summing up the evolution of China's policies and systems relating to resources and the environment, this book goes on to study how China's participation in global resource allocation and global resource governance has progressed under its open-economy situation, as well as challenges facing that participation. Based on all these analysis, the report proposes two targets for managing the total quantities of two specific metrics. That is, it recommends aiming to reach peak consumption of resources and peak emission of pollutants by 2030. In addition, it makes a number of specific policy recommendations. The China Development Research Foundation (CDRF) is a public foundation initiated by the Development Research Center of the State Council (DRC). Its mission is to advance good governance and public policy to promote economic development and social progress. The Foundation has approached its mandate in a number of ways, including support for evidence-based policy research, leadership training, high-level forums and symposiums to promote economic cooperation and development, and the promotion of responsible public policy. As China continues to move steadily ahead with policy reforms and investments for more inclusive development, the demands for research, transparent and accountable processes, and citizenship engagement are expanding. **Financial Instrument Pricing Using C++** Jun 24 2019 An integrated guide to C++ and computational finance This complete guide to C++ and computational finance is a follow-up and major extension to Daniel J. Duffy's 2004 edition of *Financial Instrument Pricing Using C++*. Both C++ and computational finance have evolved and changed dramatically in the last ten years and this book documents these improvements. Duffy focuses on these developments and the advantages for the quant developer by: Delving into a detailed account of the new C++11 standard and its applicability to computational finance. Using de-facto standard libraries, such as Boost and Eigen to improve developer productivity. Developing multiparadigm software using the object-oriented, generic, and functional programming styles. Designing flexible numerical algorithms: modern numerical methods and multiparadigm design patterns. Providing a detailed explanation of the Finite Difference Methods through six chapters, including new developments such as ADE, Method of Lines (MOL), and Uncertain Volatility Models. Developing applications, from financial model to algorithmic design and code, through a coherent approach. Generating interoperability with Excel add-

ins, C#, and C++/CLI. Using random number generation in C++11 and Monte Carlo simulation. Duffy adopted a spiral model approach while writing each chapter of Financial Instrument Pricing Using C++ 2e: analyse a little, design a little, and code a little. Each cycle ends with a working prototype in C++ and shows how a given algorithm or numerical method works. Additionally, each chapter contains non-trivial exercises and projects that discuss improvements and extensions to the material. This book is for designers and application developers in computational finance, and assumes the reader has some fundamental experience of C++ and derivatives pricing. HOW TO RECEIVE THE SOURCE CODE Once you have purchased a copy of the book please send an email to the author dduffyATdatasim.nl requesting your personal and non-transferable copy of the source code. Proof of purchase is needed. The subject of the mail should be "C++ Book Source Code Request". You will receive a reply with a zip file attachment.

**Fundamentals of Plan Making** Sep 19 2021 Urban and regional planning programs aspire to prepare practitioners to write and implement plans, primarily at the local level of government. These programs are very much "professional" in their aspirations, as opposed to research oriented. Yet, academic planning programs often place greater emphasis on theory than practice. For decades, the planning academy has acknowledged a major disconnect between what the planning academy teaches students and the techniques and skills needed to be a successful professional practitioner. Fundamentals of Plan Making will give planning students an understanding of research design as it applies to planning, develop familiarity with various data sources, and help them acquire knowledge and the ability to conduct basic planning analyses such as population projections, housing needs assessments, development impact analyses, and land use plans. Students will also learn how to implement the various citizen participation methods used by planners and develop an appreciation of the values and roles of practicing planners. In Fundamentals of Plan Making, Edward Jepson and Jerry Weitz bring their extensive experience as practicing academics and give planning students the practical, hands on tools they need to implement the various methods used to create and implement real plans and policies. Its chapters on transportation, housing, environment, economic development and other core development topics also make it a handy reference for planning practitioners.
