Preserving Public Trust Feb 13 2021 Amid increasing concern for patient safety and the shutdown of prominent research operations, the need to improve protections for individuals who volunteer to participate in research has become critical. Preserving Public Trust: Accreditation and Human Research Participant Protection Programs considers the possible impact of creating an accreditation system to raise the performance of local protection mechanisms. In the United States, the system for human research participant protections has centered on the Institutional Review Board (IRB); however, this report envisions a broader system with multiple functional elements. In this context, two draft sets of accreditation standards are reviewed (authored by Public Responsibility in Medicine & Research and the National Committee for Quality Assurance) for their specific content in core areas, as well as their objectivity and validity as measurement tools. The recommendations in the report support the use of accreditation as a quality improvement strategy, suggesting that the model should be initially pursued through pilot testing of the proposed accreditation programs.

An Introduction to Healthcare Organizational Ethics Sep 30 2019 This is a lucid, readable discussion of ethical questions in health care as they arise on the business or organizational level: an effort to spell out an ethical perspective for healthcare organizations. It will be of use to students, health services management programs, health care professionals, healthcare administrators, and members of healthcare ethics committees. The book begins with the ethical analysis of decision-making in the management of healthcare organizations and then addresses some of the questions of organizational ethics through an analysis of corporate social responsibility in for-profit and not-for-profit organizations and of the problem of uncompensated care. Later chapters take up patient development, community relations, diversity, employee relations, governmental relations, regulatory compliance and medical records. The author's analysis focuses on healthcare institutions as business organizations with many of the problems faced by corporate management in other fields but with the difference that health care holds a special place among human needs. Traditionally been viewed from an altruistic perspective. He gives special attention to the new standards on organizational ethics promulgated by the Joint Commission on Accreditation of Healthcare Organizations and includes many case studies not only to illustrate the main points but to direct the reader's attention to peripheral aspects that can complicate these issues.
