*Avro Vulcan* Feb 21 2022 The Avro Vulcan is probably the most famous and best loved of the three V-Bombers that constituted the Royal Air Force's nuclear strike force during the 1960s. Immediately recognizable thanks to its huge delta wing, it was at the forefront of Britain's strategic nuclear defenses for over a decade. As the nuclear deterrent was passed to the Royal Navy at the end of the 1960s, the Vulcan was redeployed onto tactical interdiction duties. During the 1982 Falklands War, the Vulcan saw the only combat service of its career. This detailed study surveys the history of the aircraft from its inception in 1947 to its final role as an inflight-refueling tanker in the mid-1980s, and beyond.

**Pocket Battleships of the Deutschland Class** Feb 09 2021 The warships of the World War II era German Navy are among the most popular subject in naval history with an almost uncountable number of books devoted to them. However, for a concise but authoritative summary of the design history and careers of the major surface ships it is difficult to beat a series of six volumes written by Gerhard Koop and illustrated by Klaus-Peter Schmolke. Each contains an account of the development of a particular class, a detailed description of the ships, with full technical details, and an outline of their service, heavily illustrated with plans, battle maps and a substantial collection of photographs. These have been out of print for ten years or more and are now much sought after by enthusiasts and collectors, so this new modestly priced reprint of the series will be widely welcomed.??This volume covers the three ships of a design so revolutionary that it defied conventional categories. Deutschland (later renamed LÜtzow), Admiral Scheer and Admiral Graf Spee were simply termed panzerschiffe (armoured ships) by the Germans, but they were known to their opponents by the far more evocative term Pocket Battleships.

**The Early Years, 4-Stroke Engines Make Their Debut** Jul 26 2022 This collection is a resource for studying the history of the evolving technologies that have contributed to snowmobiles becoming cleaner and quieter machines. Papers address design for a snowmobile using E10 gasoline (10% ethanol mixed with pump gasoline). Performance technologies that are presented include: • Engine Design: application of the four-stroke engine • Applications to address both engine and track noise • Exhaust After-treatment to reduce emissions The SAE International Clean Snowmobile Challenge (CSC) program is an engineering design competition. The program provides undergraduate and graduate students the opportunity to enhance their engineering design and project management skills by reengineering a snowmobile to reduce emissions and noise. The competition includes internal combustion engine categories that address both gasoline and diesel, as well as the zero emissions category in which range and draw bar performance are measured. The goal of the competition is designing a cleaner and quieter snowmobile. The competitors’ modified snowmobiles are also expected to be cost-effective and comfortable for the operator to drive.
