Interpretation and Uses of Medical Statistics Aug 19 2021 In 1969 the first edition of this book introduced the concepts of statistics and their medical application to readers with no formal training in this area. While retaining this basic aim, the authors have expanded the coverage in each subsequent edition to keep pace with the increasing use and sophistication of statistics in medical research. This fifth edition has undergone major restructuring, with some sections completely rewritten; it is now more logically organized and more user friendly (with the addition of 'summary boxes' throughout the text). It incorporates new statistical techniques and approaches that have made an appearance since the last edition. In addition, some chapters or chapter headings are specifically marked to signify material that is more difficult than the material in which it is embedded - such sections or chapters can be omitted at first reading. Several new chapters have been added . "Associations: Chance, Confounded and Causal?" explains without any formulae the concepts underlying confounding, confidence intervals and p values, and the interpretation of associations observed in research investigations. Another new chapter considers sample size calculations in some detail and provides, in addition to the relevant formulae, useful tables that should give the researcher an indication of the order of magnitude of the number of subjects he or she might require in different situations.

A Socio-Rhetorical Interpretation of the Letter to Philemon in Light of the New Institutional Economics Aug 26 2019 In this study, Alex Hon Ho Ip argues that when Paul wrote to Philemon about Onesimus, his main purpose was not to try and reunite, as is widely held, a runaway slave with his master, but rather to have Onesimus accepted as a beloved brother in Christ. By examining the letter's inner texture, the author shows that Paul's main concern was for Philemon and Onesimus to be reconciled in brotherly love. The inter-textual weave reveals Paul's theological and ethical thoughts on love, which is the basis for the apostle's main argument. By taking a new institutional economics approach to help reconstruct the economic relationship between slave and master, Alex Hon Ho Ip is able to offer a better understanding of the original relationship Paul argued against. With all this in mind, the focus is on re-reading the letter and hearing how Paul's rhetoric exhorts a new relationship between Onesimus and Philemon.

Cognitive Techniques in Visual Data Interpretation Oct 28 2019 The extremely rapid progress of science dealing with the design of new computer systems and the development of intelligent algorithmic solutions for solving c- plex problems has become apparent also in the field of computational intelligence and cognitive informatics methods. The progress of these new branches of inf- matics has only started a few years ago, but they are already making a very s- nificant contribution to the development of modern technologies, and also forming the foundations for future research on building an artificial brain and systems i- tating human thought processes. We are already able to build robots with basic machine intelligence, which can sometimes perform complex actions and also - erate by adapting to changing conditions of their surroundings. This very impr- sive development of intelligent systems is manifested in the creation of robotic devices which use artificial intelligence algorithms in their operations, mo- ments, when solving difficult problems or communicating with humans. It is also evidenced by the introduction of new methods of reasoning about and interpreting objects or events surrounding the system. One of the fields in which the need to deploy such modern solutions is obvious are cognitive vision systems used both in mobile robots and in computer systems which recognise or interpret the meaning of recorded signals or patterns.
