[Perceptual Modification](#) Feb 25 2020

Perceptual Modification: Adapting to Altered Sensory Environments is about the study of human perception using a particular research strategy: the systematic alteration of vision or audition. It is assumed that by observing how the sensory apparatus copes with this disturbance it will be possible to formulate valuable hypotheses about the structure and development of "normal" perception and perceptual-motor coordination. The specific goals of this book are, first, to organize the vast and confusing literature on adaptation to perceptual rearrangement and, second, to assess its contribution to the understanding of "normal" perception and perceptual learning. The book begins with discussions of adaptation to small prism-induced displacements of the visual field. Separate chapters follow on the proposition that adaptation to prismatic displacement and other forms of rearrangement is actually a form of learning; adaptation to inverted and reversed vision; optical tilt; illusory motions of the visual field; size-depth distortions; and distortions of form. Subsequent chapters deal with studies of auditory rearrangement; examine individual and interspecies differences in adaptability; and the study of adaptation to the visual distortions encountered by the underwater observer. The book is written for researchers and graduate students in experimental psychology. It will be of value and interest whether the reader is a specialist in the area of perceptual modification, or indeed a generalist.

**Medicine in Quotations** Jul 20 2019 Who was the first to write about a certain disease, diagnose it, and treat it? This book answers those questions for a wide range of diseases, from Abetalipoproteinemia to Zollinger-Ellison syndrome. What were the medical practitioners of previous generations hoping to achieve? What were their patients expecting of them? The answers are found in these quotations. Containing over 3,000 entries, and now updated with more than 450 new quotations, this new edition of *Medicine in Quotations* is the most comprehensive

collection of its type published in over 30 years. It is much more than a random collection of famous sayings relating to sickness and health, disease and treatment; it is a portrait of medicine throughout recorded history. You will discover how medical concepts and practices have developed and shifted through the millennia, and how many illnesses recognized today were first identified a thousand or more years ago.

[More Speech, Not Less](#) Jun 11 2021 In this guide to existing law, developing trends, and critical policy determinations, Sableman discusses privacy, Internet communications and policy, censorship, libel and slander, copyright and intellectual property, advertising, broadcasting, and journalistic confidentiality. Through actual cases and practical examples, he examines and explains both the existing rules for communications professionals and the developing policies that deserve the attention and scrutiny of informed citizens. Sableman approaches these subjects as a practicing lawyer experienced in both business and media communications.

**Stratton, Biggleswade: 1,300 Years of Village Life in Eastern Bedfordshire from the 5th Century AD** Mar 08 2021 Stratton, Biggleswade: 1,300 years of village life in eastern Bedfordshire from the 5th century AD presents the results of 12 hectares of archaeological excavation undertaken between 1990 and 2001. As well as uncovering roughly half of the medieval village, the investigations revealed that Stratton's origins stretched back to the early Anglo-Saxon period, with the settlement remaining in continuous use through to c.1700. In contrast to many of the other major excavations of Anglo-Saxon settlements, the evidence from Stratton provides insights into the lives of a low-status rural community, whose development can be traced over the course of more than a millennium. This book presents a chronological account of Stratton's development; evidence for its economy, trading relations, industrial activities and agricultural landscape; and a discussion of how people lived and died there before the village was finally extinguished by the creation of the classic estate landscape of Stratton Park. Immersive Embodiment Mar 28 2020 This book offers a wide-ranging examination of acts of 'virtual embodiment' in

performance/gaming/applied contexts that abstract an immersant's sense of physical selfhood by instating a virtual body, body-part or computer-generated avatar. Emergent 'immersive' practices in an increasingly expanding and cross-disciplinary field are coinciding with a wealth of new scientific knowledge in body-ownership and self-attribution. A growing understanding of the way a body constructs its sense of selfhood is intersecting with the historically persistent desire to make an onto-relational link between the body that 'knows' an experience and bodies that cannot know without occupying their unique point of view. The author argues that the desire to empathize with another's ineffable bodily experiences is finding new expression in contexts of particular urgency. For example, patients wishing to communicate their complex physical experiences to their extended networks of support in healthcare, or communities placing policymakers 'inside' vulnerable, marginalized or disenfranchised virtual bodies in an attempt to prompt personal change. This book is intended for students, academics and practitioner-researchers studying or working in the related fields of immersive theatre/art-making, arts-science and VR in applied performance practices.

**"Follow the Flag"** Dec 25 2019 "Follow the Flag" offers the first authoritative history of the Wabash Railroad Company, a once vital interregional carrier. The corporate saga of the Wabash involved the efforts of strong-willed and creative leaders, but this book provides more than traditional business history. Noted transportation historian H. Roger Grant captures the human side of the Wabash, ranging from the medical doctors who created an effective hospital department to the worker-sponsored social events. And Grant has not ignored the impact the Wabash had on businesses and communities in the "Heart of America." Like most major American carriers, the Wabash grew out of an assortment of small firms, including the first railroad to operate in Illinois, the Northern Cross. Thanks in part to the genius of financier Jay Gould, by the early 1880s what was then known as the Wabash, St. Louis & Pacific Railway reached the principal gateways of Chicago, Des Moines, Detroit, Kansas City, and St. Louis. In the 1890s, the Wabash gained access to Buffalo and direct connections to Boston and New York City. One extension, spearheaded by Gould's eldest son, George, fizzled. In 1904 entry into Pittsburgh caused financial turmoil, ultimately throwing the Wabash into receivership. A subsequent reorganization allowed the Wabash to become

an important carrier during the go-go years of the 1920s and permitted the company to take control of a strategic "bridge" property, the Ann Arbor Railroad. The Great Depression forced the company into another receivership, but an effective reorganization during the early days of World War II gave rise to a generally robust road. Its famed Blue Bird streamliner, introduced in 1950 between Chicago and St. Louis, became a widely recognized symbol of the "New Wabash." When "merger madness" swept the railroad industry in the 1960s, the Wabash, along with the Nickel Plate Road, joined the prosperous Norfolk & Western Railway, a merger that worked well for all three carriers. Immortalized in the popular folk song "Wabash Cannonball," the midwestern railroad has left important legacies. Today, forty years after becoming a "fallen flag" carrier, key components of the former Wabash remain busy rail arteries and terminals, attesting to its historic value to American transportation.

**Elements of Form & Design in Classic Architecture Shown in Exterior & Interior Motives Collated from Fine Buildings of All Time on One Hundred Plates** Aug 01 2020

"This book aims to initiate all who are concerned with the design of buildings into first principles of arrangement, irrespective of style, period or fashion, and its scope is deliberately focussed on the most elementary of known forms. The culminating periods of Greek and Roman architecture have here been drawn upon as well as the whole range of matured Renaissance architecture in Europe, and the book has been compiled not only from actual buildings but also from the wider field of projected designs. In the illustrations, all the buildings and motifs are presented in their simplest aspect, free from confusing detail, so that the main lines of the various schemes can be understood at a glance and the different forms compared."--BOOK JACKET.
