Audel Complete Building Construction May 15 2021 You can build on this foundation Whether construction is your livelihood or you're just planning a home addition, you need to know the latest about materials, methods, and more. From locating the structure on the site to installing roof shingles, this book helps you make responsible decisions about every stage of building construction. Fully updated with information about available resources, new materials, and recent code changes, it helps you build cost-effective, energy-efficient structures with confidence. * Understand how different types of lots, covenants, and zoning will affect structure placement * Consider the Air Freezing Index and Degree Days when planning foundations * Look at the pros and cons of welded wire fabric in concrete work * Explore low-E window glass, heat mirror, and switchable glazings * Find out what insulation and ventilation procedures are most effective * Learn about the properties of Gypsonite(TM) and FiberBond(TM) in interior construction * Handle the radon hazard and other environmental issues

Chudley and Greeno's Building Construction Handbook Apr 25 2022 The 12th edition of Chudley and Greeno's Building Construction Handbook remains THE authoritative reference for all construction students and professionals. The principles and processes of construction are explained with the concepts of design included where appropriate. Extensive coverage of building construction practice, techniques and regulations representing both traditional procedures and modern developments are included to provide the most comprehensive and easy to understand guide to building construction. This new edition has been updated to reflect recent changes to the building regulations, as well as new material on modern methods of construction, greater emphasis on sustainability and a new look interior. Chudley and Greeno's Building Construction Handbook is the essential, easy-to-use resource for undergraduate and vocational students on a wide range of courses including NVQ and BTEC National, through to Higher National Certificate and Diploma, to Foundation and three-year Degree level. It is also a useful practical reference for building designers, contractors and others engaged in the construction industry.

BUILDING CONSTRUCTION Oct 20 2021 This book, a companion volume to the author's book on Building Materials, explains the basics of building construction practices in an accessible style. It discusses in detail every element of building construction from start to the finish—from site preparation to provision of services (such as water supply, drainage and electricity supply). Besides, the text describes acoustics and maintenance of buildings, which are important considerations in construction of buildings. This book is primarily designed as an introductory textbook for under-graduate students of civil engineering as well as those pursuing diploma courses in civil engineering and architecture. Practising engineers and any person who has a keen interest in the construction and maintenance of his/her own building will also find the book very helpful. KEY FEATURES : ? Separate Appendix is given to discuss earthquake-resistant design of buildings. ? Review Questions provided at the end of each chapter enable the readers recapitulate the topics. ? The references to IS codes and standards make the text suitable for further study and field use. ? Because of the lecture-based presentation of the subject, the text will be of considerable benefit for the young teachers for their classroom lectures.

Biomimetic Research for Architecture and Building Construction Feb 21 2022 This book comprises a first survey of the Collaborative Research Center SFB-TRR 141 'Biological Design and Integrative Structures – Analysis, Simulation and Implementation in Architecture', funded by the Deutsche Forschungsgemeinschaft since October 2014. The SFB-TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart, biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of Tübingen. The program is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach. During the last few decades, computational methods have been introduced into all fields of science and technology. In architecture, they enable the geometric differentiation of building components and allow the fabrication of porous or fibre-based materials with locally adjusted physical and chemical properties. Recent developments in simulation technologies focus on multi-scale models and the interplay of mechanical phenomena at various hierarchical levels. In the natural sciences, a multitude of

quantitative methods covering diverse hierarchical levels have been introduced. These advances in computational methods have opened a new era in biomimetics: local differentiation at various scales, the main feature of natural constructions, can for the first time not only be analysed, but to a certain extent also be transferred to building construction. Computational methodologies enable the direct exchange of information between fields of science that, until now, have been widely separated. As a result they lead to a new approach to biomimetic research, which, hopefully, contributes to a more sustainable development in architecture and building construction.

Carpentry and Building Construction Aug 06 2020 This book has been designed as a basic text for students in wood technology classes at the high school, vocational school, and community junior college levels. It will also be helpful to those in apprenticeship training and to do-it-yourselfers who wish to undertake building or remodeling projects.

Adams' Building Construction May 03 2020 Henry Adams' Building Construction was first published in 1906. It was reprinted several times and revised in 1912 with the addition of 24 pages on reinforced concrete. Beautifully illustrated with over 2,300 engravings and twelve tinted plates, it is reprinted here, unabridged, for the first time in nearly one hundred years. Adams' work sits comfortably alongside the other great construction books of the period: "Rivingtons" (also facsimiled by Donhead) and "Mitchell's". The latter two were actually slightly earlier: "Rivingtons" had already reached its fifth edition by 1906, and "Mitchell's" was in its seventh. Nevertheless Adams was hugely popular, selling over 40,000 copies in its first decade. There seems to be little doubt that its great advantage over its rivals was its format: while the others consisted of several volumes, Adams covered everything in a single one. As such it was more popular with students of building construction preparing for their exams and no doubt they kept it at their side for reference throughout their working lives. Although a great deal has changed in building technology since 1906, there is still much to learn from this volume. Of course it will be particularly useful to those who own a building of the period or who are professionals charged with looking after such buildings. But for everyone it provides an invaluable insight into the thinking of the time and an extraordinary snapshot of building in the Edwardian era. Its great benefit is its clarity.

Practical Project Management for Building and Construction Sep 06 2020 Practical Project Management for Building and Construction covers the 14 knowledge areas of project management that are essential for successful projects in the construction industry. For each knowledge area, it explains the processes for scope, time, risk, cost, and resource management. Filled with work and process flow diagrams, it demonstrates h

Exercises in Building Construction Mar 01 2020 Fundamentals of Building Construction, Sixth Edition, involves students in the types of everyday issues faced by professional building architects. Exercises in Building Construction, Sixth Edition, offers students a hands-on way to apply material learned in the core book by featuring: Forty-six real world construction problems Clear instructions for each exercise Informative, concise illustrations Ample space to work out answers Complete with online resources for students and instructors, Exercises in Building Construction, Sixth Edition provides expert developmental guidance from the industry's leading authorial team.

Characteristics and Uses of Steel Slag in Building Construction Jul 25 2019

Characteristics and Uses of Steel Slag in Building Construction focuses predominantly on the utilization of ferrous slag (blast furnace and steel slag) in building construction. This extensive literature review discusses the worldwide utilization of ferrous slag and applications in all sectors of civil engineering, including structural engineering, road construction, and hydro-technical structures. It presents cutting-edge research on the characteristics and properties of ferrous slag, and its overall impact on the environment. Comprehensively reviews the literature on the use of blast furnace and steel slag in civil engineering Examines the environmental impact of slag production and its effect on human health Presents cutting-edge research from worldwide studies on the use of blast furnace and steel slag

Building Construction and Drawing Jan 29 2020 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

Sustainable Materials in Building Construction Jul 29 2022 This book presents a selection of recent research works that provide best practice solutions, case studies and practical advice on the implementation of sustainable construction techniques. The topics covered include innovations in building sustainability assessment, sustainable construction and materials, service-life prediction, construction 4.0, digitalization of the construction process, and circular economy. Reviewing the current state of knowledge, the book will benefit scientists, students, practitioners, lecturers and other interested parties in a range of scientific and engineering disciplines, e.g. civil, materials and mechanical engineering.

Building Construction Aug 18 2021

Building Construction Nov 08 2020 This text has been designed to assist students who are studying building construction and technology as part of their technical education. It has been specially prepared to match the typical syllabuses found in senior secondary schools and colleges where technical and vocational studies form part of the curriculum.

European Building Construction Illustrated Nov 20 2021 The first European edition of Francis DK Ching's classic visual guide to the basics of building construction. For nearly four decades, the US publication Building Construction Illustrated has offered an outstanding introduction to the principles of building construction. This new European edition focuses on the construction methods most commonly used in Europe, referring largely to UK Building Regulations overlaid with British and European, while applying Francis DK Ching's clear graphic signature style. It provides a coherent and essential primer, presenting all of the basic concepts underlying building construction and equipping readers with useful guidelines for approaching any new materials or techniques they may encounter. European Building Construction Illustrated provides a comprehensive and lucid

presentation of everything from foundations and floor systems to finish work. Laying out the material and structural choices available, it provides a full understanding of how these choices affect a building's form and dimensions. Complete with more than 1000 illustrations, the book moves through each of the key stages of the design process, from site selection to building components, mechanical systems and finishes. Illustrated throughout with clear and accurate drawings that effectively communicate construction processes and materials Provides an overview of the mainstream construction methods used in Europe Based around the UK regulatory framework, the book refers to European level regulations where appropriate. References leading environmental assessment methods of BREEAM and LEED, while outlining the Passive House Standard Includes emerging construction methods driven by the sustainability agenda, such as structural insulated panels and insulating concrete formwork Features a chapter dedicated to construction in the Middle East, focusing on the Gulf States

Construction Site Log Book Dec 30 2019 This Construction Site Log Book is the perfect tool to track and organize the details regarding the management of building sites and daily job activities. Tracking employees, subcontractors, equipment & materials will help keep your jobs running smoothly. Recording safety issues is important for any job site. Plenty of space to record all your information in an easy to use format. Features: Date and Day of the Week Foreman Name and Contact number Visitors- Record Any Visitors for the Day Weather Conditions- Record Time of Day, Temperature, Ground Conditions, Lost Hours Due to Bad Weather Problems/Delays Schedule for the Day- Completion Date, Days Ahead of Schedule, Days Behind Schedule Injuries / Accidents - On The Job, Type Of Injury, Details Of The Injury Safety - Toolbox Topic, Signage Posted, Everyone Wearing PPE, Checklist Complete, and Notes Summary of Work Performed for the Day Name & Signature Employee/Craft- Contracted Hours, Overtime, Subcontractors/Craft Hours Worked Equipment On-Site- Number of Units, Working (yes or no) Materials Delivered- Number of Units, Materials Rented, Date and Rate Space for Notes Details: Size: 8.5" x 11" Pages: 126 Paperback Matte finish Order this book today to start tracking your daily construction projects. Makes a great gift for contractors, subcontractors, builders, and home renovation projects.

Carpentry & Building Construction Mar 13 2021 "Spence has produced a hefty...guide to carpentry that covers the entire process of building from planning through finishing. The scope is impressive—704 pages and 2,300 black-and-white photographs and drawings, building codes, foundations, framing, doors and windows, exterior finishing, cabinet construction, and tools....There is something here for everyone, beginner to expert....will appeal to both do-it-yourselfers and professionals."—Library Journal.

Building Construction and Materials Dec 10 2020 ?ABOUT THE BOOK: feel proud in issuing the Seventh Edition of the book "Building Construction and Materials". The subject " Building Construction and Materials" is a very vast and tedious subject of Civil Engineering. Author has tried to explain all the aspects of this subject in a very simple and lucid language. The Book is entirely in SI Units. The book covers the syllabi prescribed by

all the Indian universities, State Technical Boards and A.M.I.E. (India) examinations. The book is also very useful for Engineers involved in construction industry. All the relevant I.S.I. Recommendations and other useful data have been incorporated in the book. Author has tried to explain all the aspects with the help of lot of neat drawings. It is hoped that the book will satisfy all the needs of the students and practising engineers in regard to this subject. In order to increase the usefulness of the book basic engineering materials have been added in this revised 17th edition. Basic engineering material like stone, bricks, lime, cement, timber and iron has been added in this edition. ?RECOMMENDATIONS: A textbook for all Engineering Branches, Competitive Examination, ICS, and AMIE Examinations In S.I Units For Degree, Diploma and A.I.M.E. (India) Students and Practicing Civil Engineers. ?ABOUT THE AUTHOR: Dr. Gurcharan Singh Joint Director (Retd.) Directorate of Technical Education Rajasthan, Jodhpur ?BOOK DETAILS: ISBN : 978-81-89401-21-4 Pages: 933 + 26 Edition: 17th, Year-2019 Size(cms): L-23.7, B-15.8, H-3.7 ?For more Offers visit our Website: www.standardbookhouse.com

Construction and Building Research Nov 01 2022 Many areas of knowledge converge in the building industry and therefore research in this field necessarily involves an interdisciplinary approach. Effective research requires strong relation between a broad variety of scientific and technological domains and more conventional construction or craft processes, while also considering advanced management processes, where all the main actors permanently interact. This publication takes an interdisciplinary approach grouping various studies on the building industry chosen from among the works presented for the 2nd International Conference on Construction and Building Research. The papers examine aspects of materials and building systems; construction technology; energy and sustainability; construction management; heritage, refurbishment and conservation. The information contained within these pages may be of interest to researchers and practitioners in construction and building activities from the academic sphere, as well as public and private sectors.

Building Construction Illustrated Sep 30 2022 The classic visual guide to the basics of building construction, now with the most current information For nearly three decades, Building Construction Illustrated has offered an outstanding introduction to the principles of building construction. This new edition of the revered classic remains as relevant as ever-providing the latest information in Francis D.K. Ching's signature style. Its rich and comprehensive approach clearly presents all of the basic concepts underlying building construction and equips readers with useful guidelines for approaching virtually any new materials or techniques they may encounter. Laying out the material and structural choices available, it provides a full understanding of how these choices affect a building's form and dimensions. Complete with more than 1,000 illustrations, the book moves through each of the key stages of the design process, from site selection to building components, mechanical systems, and finishes. Illustrated throughout with clear and accurate drawings that present the state of the art in construction processes and materials Updated and revised to include the latest knowledge on sustainability, incorporation of building systems, and use of new materials Archetypal drawings offer clear inspiration for designers and drafters Reflects the most current building codes and CSI Master Format numbering scheme With its

comprehensive and lucid presentation of everything from foundations and floor systems to finish work, *Building Construction Illustrated*, Fourth Edition equips students and professionals in all areas of architecture and construction with useful guidelines for approaching virtually any new materials or techniques they may encounter in building planning, design, and construction.

Building Construction Handbook Mar 25 2022 Ideal for students on all construction courses Topics presented concisely in plain language and with clear drawings Updated to include revisions to Building and Construction regulations The *Building Construction Handbook* is THE authoritative reference for all construction students and professionals. Its detailed drawings clearly illustrate the construction of building elements, and have been an invaluable guide for builders since 1988. The principles and processes of construction are explained with the concepts of design included where appropriate. Extensive coverage of building construction practice, techniques, and regulations representing both traditional procedures and modern developments are included to provide the most comprehensive and easy to understand guide to building construction. This new edition has been updated to reflect recent changes to the building regulations, as well as new material on the latest technologies used in domestic construction. *Building Construction Handbook* is the essential, easy-to-use resource for undergraduate and vocational students on a wide range of courses including NVQ and BTEC National, through to Higher National Certificate and Diploma, to Foundation and three-year Degree level. It is also a useful practical reference for building designers, contractors and others engaged in the construction industry.

Fundamentals of Residential Construction Oct 27 2019 The leading guide to professional home construction—now updated and revised! *Fundamentals of Residential Construction*, Third Edition features the most up-to-date explanations of today's residential construction systems. From foundation to roof and exterior finishes to interior details, this new edition thoroughly addresses the latest developments in materials and methods of house construction, including energy efficiency, framing, and roofing. Abundantly illustrated with more than 1,250 drawings and photographs, including new photorealistic illustrations that bring the text to life, this Third Edition provides authoritative coverage on wood light-frame construction, industrialized systems of construction, insulating concrete forms, light-gauge steel frame, panelized construction, and a new chapter on multifamily construction. Topics covered include: Plumbing Building codes Heating and cooling Financing Wiring Roofing Thermal insulation Environmental concerns Foundations Finish sitework Rough sitework Wood and light-gauge steel framing Engineered materials Exterior and interior finishes Organized in a logical, easy-to-follow format, *Fundamentals of Residential Construction*, Third Edition is the one-stop source for building professionals to gain a working knowledge of codes, management procedures, material, and all home building concerns.

Eco-efficient Construction and Building Materials Oct 08 2020 *Eco-efficient Construction and Building Materials* reviews ways of assessing the environmental impact of construction and building materials. Part one discusses the application of life cycle assessment (LCA) methodology to building materials as well as eco-labeling. Part two includes case studies showing the application of LCA methodology to different types of building material, from cement and concrete to wood and adhesives used in building. Part three includes case

studies applying LCA methodology to particular structures and components. Reviews ways of assessing the environmental impact of construction and building materials Provides a thorough overview, including strengths and shortcomings, of the life cycle assessment (LCA) and eco-labeling of eco-efficient construction and building materials Includes case studies showing the application of LCA methodology to different types of building material, from cement and concrete to wood and adhesives used in building

McKay's Building Construction Jan 23 2022 McKay offers conservation practitioners an essential understanding of the traditional forms of construction, covering the use of masonry and brickwork, carpentry and joinery, slating, plumbing and drainage. The book includes: the author's extensive, highly detailed drawings to illustrate the text; useful material on traditional craft practice - essential for undertaking repairs; and explanations of terminology and techniques - simply described.

Dictionary of Architecture and Building Construction May 27 2022 With more than 20,000 words and terms individually defined, the Dictionary offers huge coverage for anyone studying or working in architecture, construction or any of the built environment fields. The innovative and detailed cross-referencing system allows readers to track down elusive definitions from general subject headings. Starting from only the vaguest idea of the word required, a reader can quickly track down precisely the term they are looking for. The book is illustrated with stunning drawings that provide a visual as well as a textual definition of both key concepts and subtle differences in meaning. Davies and Jokiniemi's work sets a new standard for reference books for all those interested in the buildings that surround us. To browse the book and to see how this title is an invaluable resource for both students and professionals alike, visit www.architectsdictionary.com.

Building Construction and Drawing 1906 Jun 15 2021 Originally published in 1881, but here reissuing the 1906 edition with a new introduction by Stephen J. Scaysbrook, the Mitchell Building and Construction books offer an unparalleled insight into construction techniques and materials. Originally written to provide a concise handbook and guide for students and for practitioners, this reissue of Mitchell's 1906 First Stage or Elementary Course edition now provides a valuable addition to building pathology, allowing students and practitioners to research construction methods and materials pertinent to the period. Including over 1000 drawings, it is of no surprise to see Mitchell's First Stage or Elementary edition start with a detailed explanation of the instruments and methods of drawing with pencil ink and tracing paper, emphasising the need to learn basic drawing skills and the need to think about a detail and the materials used to create a detail capable of lasting well over 100 years or more. The simple act of making a scale from a drawing with only one dimension may be lost to modern-day students, but not to Charles Mitchell, who describes the method and its use.

Building Construction Sep 26 2019 Text only. This product does NOT include a Resource Central Access Code Card. To purchase the text with a Resource Central Access Code Card, please use ISBN: 0-13-283007-8 **Building Construction: Methods and Materials for the Fire Service, Second Edition**, emphasizes the impact that an understanding of the principles of building construction has on firefighting strategy. Written by an author with extensive knowledge and experience in both the fire service and construction industries, it explains

building materials and processes that are involved in the construction of structures and provides students with the knowledge required to operate safely and effectively within residential or commercial buildings. Discussions of actual incidents experienced by the author and case studies containing critical thinking questions give students a better understanding of what to expect in the field.

Building Construction Sep 18 2021 Building Construction covers the entire process of building construction in detail, from the stage of planning and foundation building to the finishing stages like plastering, painting, electricity supply and woodwork. Each of the basic components of a building are covered separately, including doors, windows, floors, roof, walls, partitions, as are the basic finishing works like plumbing, damp-proofing, ventilation, air conditioning and so on. Essential features of construction like acoustics, fire-resistance and earthquake-resistant design are also covered. In keeping with contemporary needs, the book also includes a chapter on the environmental impact of a building and how to make it green. The text, presented in simple, precise and reader-friendly language, is amply supported by figures and tables. Together with its companion volume, Building Materials, the book will meet the academic requirements of degree, as well as diploma courses in civil engineering and architecture.

Construction and Building Automation Jun 03 2020 This book is intended to be used as a textbook in undergraduate civil engineering and construction courses to introduce cutting edge mechanical, electrical, and computer science topics that are needed for civil and construction engineers to collaborate in inter-disciplinary automation projects. Part I introduces the basics of hardware and software technologies that are needed for implementing automation in buildings and construction. The content begins with the fundamental concepts and uses practical examples to bring out the benefits of automation through case studies that are easy to understand. No other book uniformly treats the subject of automation within the context of buildings and construction activities. While the technology needed for these two application domains are similar, the unifying principles are not well recognized. This book will bring out the fundamental principles that could form the basis of application to these two domains. For example, it will become clear that sensors, actuators, and controllers, along with smart control strategies could be used for automating tasks within buildings and on construction sites. Part II of the book will introduce key advances in the areas of machine learning and artificial intelligence that are significant for the intelligent control of buildings and construction equipment. Control algorithms and techniques for data analytics are explained in a form that is appropriate for non-computer science students. Each chapter contains several hands-on exercises meant to apply the principles that are covered. These include numerical problems as well as design and analysis examples. This new textbook:

- Introduces hardware and software needed for automating engineering tasks
- Presents examples of applications in the control of building systems
- Illustrates the use of automation for improving construction processes
- Provides a lucid introduction to advanced computing concepts, machine learning, artificial intelligence, and control algorithms to construction and engineering students.

It is sure to be essential reading for a growing number of courses in smart construction, building automation, robotics, intelligent buildings, and construction 4.0. Supplementary material including answers to exercises in the book will be provided on the author's website:

Low-Cost Pole Building Construction Apr 13 2021 Cost-effective and adaptable, pole buildings are the perfect solution for tool sheds, barns, or even summer homes. Low-Cost Pole Building Construction focuses on designs that provide good wind resistance with minimal grading and no need to excavate for a foundation. With full plans for a number of sample buildings that include a solar cottage, garage, and woodshed, you'll be able to quickly and effectively build the structure you need while saving both money and time.

Estimating in Building Construction Jun 27 2022 "The seventh edition of this text continues to provide construction, architecture, and engineering students with the solid understanding of quantification they need before they advance to computerized estimating. This edition uses extensive examples and exercises to demonstrate estimate methodology and organization. Additionally, charts, illustrations, and web links are employed throughout to assist in the student's understanding." --Book Jacket.

Building Construction Handbook Jul 17 2021 Building Construction Handbook provides extensive coverage of building construction practice, processes and techniques, representing established procedures as well as those associated with recent amendments to the Building Regulations, British and European Standards and other related references. This approach, combined with the presentation of information in a highly illustrated and unique visual style, has proven this text to be a vital learning resource for thousands of building construction students, and an essential reference for professionals. The sixth edition has been updated and expanded to take into account many aspects of the new and revised Building Regulations and associated Approved Documents as applied to working practice; in particular, construction requirements for conserving and economising energy and reducing atmospheric pollution (as this relates to Building Regulations Part L - Conservation of fuel and power). This new edition also develops existing topics, including adaptation of buildings to ensure compatibility for the disabled, further details of masonry construction, applications of steel reinforcement to concrete, steel framed housing principles, sound insulation and additional details of structural glazing. Throughout, reference to supplementary regulations and standards are provided for further reading, and where appropriate, design calculations are included. Online lecture resources are provided, with power point slides available for a selection of topics, featuring essential illustrations for use with presentations and handouts. The Handbook is an invaluable reference for students. It consolidates several years of study material into one comprehensive volume, suitable for a wide range of building and construction courses, including NVQs in Construction and the Built Environment, BTEC Nationals and Higher Nationals in Building Services Engineering, Construction and Civil Engineering, as well as construction related undergraduate degrees (such as Built Environment, Civil Engineering, Building Surveying, Construction Management, Quantity Surveying, Building, Architectural Technology and Facilities Management) and professional examinations. Roger Greeno is a well-known author of construction texts. He has extensive practical and consultancy experience in the industry, in addition to lecturing at several colleges of further and higher education, and the University of Portsmouth. He has also examined for City & Guilds, Edexcel, the Chartered Institute of Building and the University of Reading. Roy Chudley's books on Building

Construction have helped thousands of students gain their qualifications and pass exams. He was formerly a Senior Lecturer at Guildford College. * Topics presented in a highly visual and easy to understand layout * The market-leading bestseller for construction practice guidance * Ideal for students on general construction and building courses * An essential reference for the industry * Updated in line with revised Building Regulations * Website resources for lecturers available

Building Construction Materials and Techniques Jun 23 2019 Building Construction Materials and Techniques follows a unique approach to the subject by including both materials and construction techniques in a combined text as per the latest trends in university curriculums. It also caters to the needs of the universities where these subjects are offered across two semesters as well. Of the 32 chapters in this book,13 are dedicated to building construction materials while the remaining 19 focus on conventional as well as modern techniques in construction. The chapters are supplemented by a plethora of self-explanatory illustrations for easy comprehension. Relevant references to IS codes and standards make this text ideal for extended learning.

Construction Technology Apr 01 2020 The four volumes of Construction Technology provide a comprehensive guide to building technology from simple domestic single storey construction using traditional techniques to more complex multi-storey construction using more modern industrialised techniques. Each volume describes the technology concisely and is well illustrated with the author's own illustrations. The series provides a basic knowledge of all building activities from basic methods of construction in the early volumes through to more complex topics such as site planning, curtain walling and builders plant in later volumes. The series concentrates on the technology and avoids lengthy descriptive passages, leaving the description to the author's very detailed drawings. Volume 2 completes the coverage of conventional methods and materials of construction. As with volume 1, it deals with the construction of a small structure such as a bungalow or two-storey house. The book introduces more complex topics than are covered in volume 1. It deals with site and temporary works, e.g. simple excavations and scaffolding; substructure topics such as retaining walls and reinforce concrete foundations; simple framed buildings; floors and roof structures such as precast concrete floors and asphalt and lead-covered roofs; finishes and fittings such as simple concrete stairs; insulation; and services such as electrical and gas installations.
