Personalized Task Recommendation in Crowdsourcing Systems Feb 18 2021 This book examines the principles of and advances in personalized task recommendation in crowdsourcing systems, with the aim of improving their overall efficiency. It discusses challenges faced by personalized task recommendation when crowdsourcing systems channel human workforces, knowledge, and perspectives beyond traditional organizational boundaries. The solutions presented help interested individuals find tasks that closely match their personal interests and capabilities in a context of ever-increasing opportunities of participating in

crowdsourcing activities. In order to explore the design of mechanisms that generate task recommendations based on individual preferences, the book first lays out a conceptual framework that guides the analysis and design of crowdsourcing systems. After a comprehensive review of existing research, it then develops and evaluates a new kind of task recommendation service that integrates with existing systems. The resulting prototype provides a platform for both the field study and the practical implementation of task recommendation in productive environments.

**PET and SPECT in Neurology** Dec 05 2020 This book provides a comprehensive overview of the use of PET and SPECT in not only classic neurodegenerative disorders but also cerebrovascular disorders, brain tumors, epilepsy, head trauma, coma, sleeping disorders, and inflammatory and infectious diseases of the CNS. The new edition has been revised and updated to reflect recent advances and includes additional chapters, for example on the use of artificial intelligence and machine learning in imaging data analysis, the study of brain connectivity using PET and SPECT images, and the role of PET imaging in modulation of brain functioning by deep brain stimulation. The authors are renowned experts whose dedication to the investigation of neurologic disorders through nuclear medicine technology has achieved international recognition. Most chapters are written jointly by a clinical neurologist and a nuclear medicine specialist to ensure a multidisciplinary approach. This state of the art compendium will be invaluable for neurologists and radiologists/nuclear medicine specialists and will also be informative for interested general practitioners and geriatricians. Companion volumes on PET and SPECT in psychiatry and in neurobiological systems complete the trilogy.

**Transition Metals in Catalysis** Jul 12 2021 Iron–sulfur (FeS) centers are essential protein cofactors in all forms of life. They are involved in many key biological processes. In particular, Fe-S centers not only serve as enzyme cofactors in catalysis and electron transfer, they are also indispensable for the biosynthesis of complex metal-containing cofactors. Among these cofactors are molybdenum (Moco) and tungsten (Wco) cofactors. Both Moco/Wco biosynthesis and Fe-S cluster assembly are highly conserved among all kingdoms of life. After formation, Fe-S clusters are transferred to carrier proteins, which insert them into recipient proteins. Moco/Wco cofactors are composed of a tricyclic pterin compound, with the metal coordinated to its unique dithiolate group. Moco/Wco biosynthesis starts with an Fe-S cluster-dependent step involving radical/S-adenosylmethionine (SAM) chemistry. The current lack of knowledge of the connection of the assembly/biosynthesis of complex metal-containing cofactors due to the sheer complexity of their synthesis with regard to both the (genetic) regulation and (chemical) metal center assembly. Studies on these metal-cofactors/cofactor-containing enzymes are important for understanding fundamental cellular processes. They will also provide a comprehensive view of the complex biosynthesis and the catalytic mechanism of metalloenzymes that underlie metal-related human diseases.

Guide to Applying Human Factors Methods 30 2020 Human error plays a significant role in many accidents involving safety-critical systems, and it is now a standard requirement in both the US and Europe for Human Factors (HF) to be taken into account in system design and safety assessment. This book will be an essential guide for anyone who uses HF in their everyday work, providing them with consistent and ready-to-use procedures and methods that can be applied to real-life problems. The first part of the book looks at the theoretical framework, methods and techniques that the engineer or safety analyst needs to use when working on a HF-related project. The second part presents four case studies that show the reader how the above framework and guidance work in practice. The case studies are based on real-life projects carried out by the author for a major European railway system and in collaboration with international companies such as the International Civil Aviation Organisation, Volvo, Daimler-Chrysler and FIAT.

Decision-Making in Nursing 11 2021 Decision-Making in Nursing: Thoughtful Approaches for Leadership, Second Edition explores multiple decision-making approaches to enable nursing students and professionals to become insightful, critical, flexible and confident decision makers in today's complex healthcare environment. With a reflective, multidimensional approach to decision-making, it examines the ways in which history, legal and ethical issues, spirituality, culture, family, the media, economic technology, and health policy affect the way nurses make decisions. With a greater emphasis on leadership, teamwork, and inter-professional relationships, this new edition provides nurses and students the opportunity to see themselves as leaders and feel comfortable making decisions as leaders. Important Notice: The digital edition of this book is missing some of the images and content found in the physical edition.

Encounters with World Affairs 23 2022 This book is designed to familiarise students with leading International Relations (IR) theories and their explanation of political events, phenomena, and processes which cross the territorial boundaries of the state. Thus, students will be exposed to the interplay between power, interest, ideas, identity, and resistance, in explaining continuous change in international relations. Developed to provide students with the analytical tools and intellectual frameworks needed to understand the behaviour of different international actors in contemporary global affairs. This textbook responds to the challenge of a dynamic job market by assisting students to gain both thorough theoretical knowledge and training them to apply this knowledge to real world problems. In short, this textbook delivers: A comprehensive and interdisciplinary approach to the examination of national, regional and global trends in politics, economics and socio-cultural developments allowing students to understand: • the practice and theory of contemporary international relations • the politics, culture, history, and economies of different regions around the world • the role played by international interactions, culture, and government in local, national, and global settings. Equipping students with the proficiency: • to understand and interpret the dynamics, patterns, and issues of international affairs • to know how to get more information about particular questions • to evaluate that information independently and effectively. To these ends, the textbook provides a number of features that will appeal to students and avoids overwhelming students with chapters on topics which (in practice) are rarely on courses, while nonetheless providing a comprehensive overview of the field. Introduces students to the main debates, topics, and terms in the field and allows them to decide which they would focus on in their further studies.
