A stratified sampling method will be used to determine the population sample guided by Naasiuma Model to come the sample size. Secondary data will be collected based on the financial statements as well as data from KAM website. Collected data will be prepared and then analyzed by use of STATA software.

Finally the analyzed information will be presented in tables, charts and figures to aid in recommendation and future decision making. Cash flow shortfall has proved to be one of the issues facing manufacturing companies in Nairobi. Companies with cash flow problems have witnessed a lot of struggle when it comes to settling their credit commitments whenever they fall due. In some cases, the effect has resulted into extreme losses, low profits, business operation difficulty and high financial costs due to excessive borrowing. The general objective of this study is to determine the effect of cash flow management activities on the financial performance of manufacturing

companies in Nairobi. To achieve this objective this study will examine how the three main components of cash flow statement component impact on the financial performance of companies under the scope. Cash flow activities according to Kew et al are cash flow from operating activities, cash flow from investing activities and cash flow from financing activities. To measure the financial performance of manufacturing companies, the study will apply two key financial ratios which include Return on Equity (ROE) and Return on Assets (ROA). Independent variables will be measured using net values of each activity as reported in the cash flow statement. The study will adopt a descriptive research design.

Cash Flow Accounting Dec 10 2020 Cash Flow Accounting explores for the first time the usefulness of the funds flow statement and its replacement by the cash flow statement. The book begins with an analysis of accounting history and of the role of accountants in advising investors and creditors. It then goes on to review both the funds flow statement and the cash flow statement in terms of their

history, geographical spread, usefulness to investors and lenders and their incremental information content in a global context. The discussion explores whether the new cash flow statement satisfies the aspirations of the old funds statement better than the original statement did. Readers are invited to examine actual funds and cash flow statements. Cash flow accounting fundamentalism is also critically examined along with the contribution of information overload theories in helping us understand the size of the gap between the actual and potential usefulness of accounting statements. The book concludes with suggestions as to how future studies of accounting usefulness could contribute to enhancing the role of accounting as the 'language of business'. Firmly set in a modern, global context, this volume will be invaluable for advanced students of financial accounting, accounting theory, and international accounting. Practising accountants will also find the analysis of real-world accounting useful and thought provoking.

Accounting, Cash Flow and Value Relevance Jan 23 2022 Although the concept "Cash is King" is today widely recognized, the cash flow statement was rather neglected until the EU accounting regulators discovered its relevance in explaining the real value of the business. This book investigates the value relevance of the operating cash flow as reported under the International Financial Reporting Standards (IAS/IFRS) for the largest European listed companies and US listed companies in the past recent years. Using the model based on the valuation theory developed by Ohlson, which measures the market value of equity as a function of accounting variables, the author concludes that operating cash flow represents a significant variable in determining the value relevance of the largest European and US listed companies. These findings provide significant implications for standard setters and support the continued requirements for disclosure of cash flow information under IAS 7.

Principles of Cash Flow Valuation Dec 22 2021 The valuation of assets, both tangible and intangible, is an important element of corporate finance. Putting a price tag on ideas is almost impossible, and in the new economy, where companies grow dependent on intangible assets all the time, market volatility can be attributed in large part to our collective ignorance of their value. There are two basic approaches to valuation: from financial statements to cash flows, and from cash flows to financial statements. The former projects historical financial statements into the future and the latter attempts to construct cash flow statements and use them in forecasting future financial statements. Established companies use the first method and start-ups the second. In *Principles of Cash Flow Valuation*, the authors strive to "close the gap" between these two approaches by presenting the principles of cash flow valuation and cost of capital in a clear and systematic fashion. * Provides the only exclusive treatment of cash flow valuation * Authors use examples and a case study to illustrate ideas * Presentation appropriate for a range of technical backgrounds: ideas are presented clearly, full exposition is also provided * Named among the Top 10 financial engineering titles by Financial Engineering News
