Accountability in Social Research Dec 10 2020 The book considers issues relating to accountability in social research by juxtaposing seven ways of approaching the issues and by moving toward the development of a particular approach to the earning of trust on the part of researchers. A conception of the practice and assessment of discursive accountability is presented as an option for consideration. The book grapples with the issue of accountability in social research by considering the extent to which and ways in which it is addressed in a number of different positions regarding the practice of social science. The focus of the book is on reviewing discourses around the practice of 'professional' inquiry, with a view to highlighting differing arguments around the question of what it might mean to assess researchers' accountabilities. The book is structured around considering in detail various views on accountability in relation to one another. A comprehensive comparison of arguments is presented in the first two chapters of the book. The debate that is set up

in the first two chapters forms the background to the elaboration and development (in Chapter 3) of constructivist argumentation in relation to the question of how accounts as set forth by researchers should be treated (by colleagues, participants, and other audiences). The continuing debate about the status to be afforded to constructions developed by researchers is tackled in this chapter. Constructivist thinking is then extended toward what is named in the book a 'trusting constructivist' position. This position focuses on ways in which trust earning and trust awarding in the context of social inquiry can proceed without researchers having to justify themselves as striving to gain access to knowledge as representation of reality. Through the development of the trusting constructivist position, the book explores ways of creating trust through processes of social discourse. An assessment of actual research projects in view of the debates set up in earlier chapters then takes place. Through these assessments readers can relate the details of the arguments developed in earlier chapters to their implications for judging the practice of (accountable) social inquiry.

Understanding Sustainable Architecture Mar 01 2020 Understanding Sustainable Architecture is a review of the assumptions, beliefs, goals and bodies of knowledge that underlie the endeavour to design (more) sustainable buildings and other built developments. Much of the available advice and rhetoric about sustainable architecture begins from positions where important ethical, cultural and conceptual issues are simply assumed. If sustainable architecture is to be a truly meaningful pursuit then it must be grounded in a coherent theoretical framework. This book sets out to provide that framework. Through a series of self-reflective questions for designers, the authors argue the ultimate importance of reasoned argument in ecological, social and built contexts, including clarity in the problem framing and linking this framing to demonstrably effective actions. Sustainable architecture, then, is seen as a revised conceptualisation of architecture in response to a myriad of contemporary concerns about the effects of human activity. The aim of this book is to be transformative by promoting understanding and discussion of commonly ignored assumptions behind the search for a more environmentally sustainable approach to development. It is argued that design decisions must be based on both an ethical position and a coherent understanding of the objectives and systems involved. The actions of individual designers and appropriate broader policy settings both follow from this understanding.

The Practice of Collaborative Counseling and Psychotherapy Apr 13 2021 Many textbooks teach the practice of counselling to new learners by relying on basic ideas generated before the 1970s and grafting more recent developments onto this foundation as optional modalities. David Pare avoids this trap. He does not assume that the world has not changed or that innovative ideas that demand attention are not constantly being produced. Neither does he dismiss the foundations of counselling laid a generation or two ago as irrelevant. Instead he weaves into them new emphases drawn from the most creative practices of recent decades and makes them relevant to students learning the basics of practice. Specifically, ideas drawn from the turn to meaning are placed alongside well-established traditions of counselling.

The Reconstruction Justice of Salmon P. Chase Aug 25 2019 The demise of the Confederacy left a legacy of legal arrangements that raised fundamental and vexing questions regarding the legal rights and status of former slaves and the status of former Confederate states. As Harold

Hyman shows, few individuals had greater impact on resolving these difficult questions than Salmon P. Chase, chief justice of the United States Supreme Court from 1865 to 1873. Hyman argues that in two cases—*In Re Turner* (1867) and *Texas v. White* (1869)—Chase combined his abolitionist philosophy with an activist jurisprudence to help dismantle once and for all the deposed machineries of slavery and the Confederacy. In these cases, Chase sought to consolidate the gains of the Civil War era, while demonstrating that the war had both preserved the precious core characteristics of the federal union of states and fundamentally improved the nature of both private and public law. *In Re Turner* was a private law case decided at the federal circuit level. It involved a black woman's claim that she, a recent slave, was being held in involuntary servitude. Elizabeth Turner's mother had apprenticed Elizabeth to their former master, who had not abided by his contractual obligations to provide Elizabeth with training and compensation, substantively keeping her in slavery. Chase's decision, which relied upon due process and equal protection implications in the thirteenth amendment and 1866 Civil Rights Act, confirmed the rights of emancipated slaves to bargain and contract with employers on a parity with white workers. *Texas v. White* was a public law case decided in the Supreme Court. It revolved around the issue of whether the holders of U.S. bonds seized and sold by the Confederate state of Texas could demand payment after the war from that state's newly reconstructed government. In effect, Chase and his associate justices were asked to determine the legality of actions committed by all former Confederate states and, thus, to define what constituted a state. Chase's opinion reaffirmed the Union's permanence, and that of the constituent states in the federal union, and the states' duty to respect the legal rights and obligations of all citizens because states were people as well as acreages and institutions. Hyman's exemplary analysis of these cases reveals how their political, legal, and constitutional aspects were so inextricably interwoven. They secured for Chase a rostrum for both moral and legal reform from which he asserted his strong views on the fundamental rights of individuals and states in an era of sporadically increasing

federal power. Hyman's study provides a much-needed reevaluation of those cases both in the context of Chase's life and in terms of their mark on history.

The Urban Climate Challenge Jul 25 2019 Drawing upon a variety of empirical and theoretical perspectives, *The Urban Climate Challenge* provides a hands-on perspective about the political and technical challenges now facing cities and transnational urban networks in the global climate regime. Bringing together experts working in the fields of global environmental governance, urban sustainability and climate change, this volume explores the ways in which cities, transnational urban networks and global policy institutions are repositioning themselves in relation to this changing global policy environment. Focusing on both Northern and Southern experience across the globe, three questions that have strong bearing on the ways in which we understand and assess the changing relationship between cities and global climate system are examined. How are cities repositioning themselves in relation to the global climate regime? How are cities being repositioned - conceptually and epistemologically? What are the prospects for crafting policies that can reduce the urban carbon footprint while at the same time building resilience to future climate change? *The Urban Climate Challenge* will be of interest to scholars of urban climate policy, global environmental governance and climate change. It will be of interest to readers more generally interested in the ways in which cities are now addressing the inter-related challenges of sustainable urban growth and global climate change. Statistical Rethinking May 27 2022 *Statistical Rethinking: A Bayesian Course with Examples in R and Stan* builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. Web Resource The book is accompanied by an R package (*rethinking*) that is available on the author's website and GitHub. The two core functions (*map* and *map2stan*) of this package allow a variety of statistical models

to be constructed from standard model formulas.
