Systems for State Science Assessment Nov 16 2021 In response to the No Child Left Behind Act of 2001 (NCLB), Systems for State Science Assessment explores the ideas and tools that are needed to assess science learning at the state level. This book provides a detailed examination of K-12 science assessment: looking specifically at what should be measured and how to measure it. Along with reading and mathematics, the testing of science is a key component of NCLB—it is part of the national effort to establish challenging academic content standards and develop the tools to measure student progress toward higher achievement. The book will be a critical resource for states that are designing and implementing science assessments to meet the 2007-2008 requirements of NCLB. In addition to offering important information for states, Systems for State Science Assessment provides policy makers, local schools, teachers, scientists, and parents with a broad view of the role of testing

Self-Studies of Science Teacher Education

Practices Oct 15 2021 Part of a vital Springer series on self-study practices in teaching and teacher education, this collection offers a range of contributions to the topic that embody the reflections of science teacher educators who have applied self-study methodology to their own professional development. The material recognizes the paradox that lies between classroom science and the education of science teachers: the disciplines of science are often perceived as a quest for right answers, an unintentional by-product of the classroom focus on right answers in student assessment in science. In contrast, the profession of teaching has few right answers and frequently involves the management of conflicting tensions. A dilemma thus arises in science teacher education of how to shift perspectives among student teachers from reductionist to more inclusive attitudes that are open to the mercurial realities of teaching. The self-studies presented here are unique, fresh and stimulating. They include the input of a beginning science teacher as well as science teacher educators from a range of backgrounds and varying levels of experience. In addition, the volume presents a truly international perspective on the issues, with authors hailing from five countries. Providing analysis at the leading edge of

education theory, this collection will make fascinating reading for those teaching science—as well as those teaching science teachers.
