**Self Control in Society, Mind, and Brain** Nov 25 2019 This book presents social, cognitive and neuroscientific approaches to the study of self-control, connecting recent work in cognitive and social psychology with recent advances in cognitive and social neuroscience. In bringing together multiple perspectives on self-control dilemmas from internationally renowned researchers in various allied disciplines, this is the first single-reference volume to illustrate the richness, depth, and breadth of the research in the new field of self control.

**Engineering** Sep 23 2019 This report reviews engineering's importance to human, economic, social and cultural development and in addressing the UN Millennium Development Goals. Engineering tends to be viewed as a national issue, but engineering knowledge, companies, conferences and journals, all demonstrate that it is as international as science. The report reviews the role of engineering in development, and covers issues including poverty reduction, sustainable development, climate change mitigation and adaptation. It presents the various fields of engineering around the world and is intended to identify issues and challenges facing engineering, promote better understanding of engineering and its role, and highlight ways of making engineering more attractive to young people, especially women.-- Publisher's description.

**Issues and trends in education for sustainable development** Nov 06 2020 Education for Sustainable Development (ESD) is globally acknowledged as a powerful driver of change, empowering learners to make decisions and take actions needed to build a just and economically viable society respectful of both the environment and cultural diversity.

**Animals and the Environment** May 12 2021 Contemporary Earth and animal activists rarely collaborate, perhaps because environmentalists focus on species and ecosystems, while animal advocates look to the individual, and neither seems to have much respect for the other. This diverse collection of essays highlights common ground between earth and animal advocates, most notably the protection of wildlife and personal dietary choice. If earth and animal advocates move beyond philosophical differences and resultant divergent priorities, turning attention to shared goals, both will be more effective – and both

animals and the environment will benefit. Given the undeniable seriousness of the environmental problems that we face, including climate change and species extinction, it is essential that activists join forces. Drawing on a wide range of issues and disciplines, ranging from wildlife management, hunting, and the work of NGOs to ethics, ecofeminism, religion and animal welfare, this volume provides a stimulating collection of ideas and challenges for anyone else who cares about the environment or animals.

**History of Vegetarianism and Veganism Worldwide (1970-2022)** Oct 17 2021 The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographic index. 48 photographs and illustrations - mostly color. Free of charge in digital PDF format. *The Limits to Growth* Jun 01 2020

**Transitions to Sustainability** Jul 22 2019 This book calls for the conditions of transition to sustainability: How to take into consideration new global phenomena such as and of the dimension of climate change, the depletion of natural resources, financial crises, demographic dynamics, global urbanization, migrations and mobility, while bearing in mind short-term or local place-based issues, such as social justice or quality of life? Meeting this challenge requires an inclusive approach of sustainability. It is a matter of designing a new social contract: Sustainability requires more than developing the right markets, institutions and metrics, it requires social momentum. To do so, many issues need a clear and complete answer: How to link social justice with sustainability policies? What governance tools to do so? What linkage between one decision-making level and the other? These are major issues to design sound transitions to sustainability.

**Disease Control Priorities, Third Edition (Volume 6)** Dec 07 2020 Infectious diseases are the leading cause of death globally, particularly among children and young adults. The spread of new pathogens and the threat of antimicrobial resistance pose particular challenges in combating these diseases. Major Infectious Diseases identifies feasible, cost-effective packages of interventions and strategies across delivery platforms to prevent and treat HIV/AIDS, other sexually transmitted infections, tuberculosis, malaria, adult febrile illness, viral hepatitis, and neglected tropical diseases. The volume emphasizes the need to effectively address emerging antimicrobial resistance, strengthen health systems, and increase access to care. The attainable goals are to reduce incidence, develop innovative approaches, and optimize existing tools in resource-constrained settings.

**Global Warming in Local Discourses** Mar 10 2021 Global news on anthropogenic climate change is shaped by international politics, scientific reports and voices from transnational protest movements. This timely volume asks how local communities engage with these transnational discourses. The chapters in this volume present a range of compelling case studies drawn from a broad cross-section of local communities around the world, reflecting diverse cultural and geographical contexts. From Greenland to northern Tanzania, it illuminates how different understandings evolve in diverse cultural and geographical contexts while also revealing some community.

**Food Choice and Sustainability** Jul 26 2022 Food Choice and Sustainability tackles the critical issue of global depletion by focusing attention on what might seem an unlikely spot: our dinner plates.

**Bear Necessities** Feb 21 2022 Twenty-two engaging and approachable essays, written by scholars and activists working to protect the world's eight bear species, explore pressures that threaten the world's remaining bears, offering a tapestry of possibilities for protecting and preserving these endangered yet much-loved beings.

**Preventing Bullying Through Science, Policy, and Practice** Sep 04 2020 Bullying has long been tolerated as a rite of passage among children and adolescents. There is an implication that individuals who are bullied must have "asked for" this type of treatment, or deserved it. Sometimes, even the child who is bullied begins to internalize this idea. For many years, there has been a general acceptance and collective shrug when it comes to a child or adolescent with greater social capital or power pushing around a child perceived as subordinate. But bullying is not developmentally appropriate; it should not be considered a normal part of the typical social grouping that occurs throughout a child's life. Although bullying behavior endures through generations, the milieu is changing. Historically, bullying has occurred at school, the physical setting in which most of childhood is centered and the primary source for peer group formation. In recent years, however, the physical setting is not the only place bullying is occurring. Technology

allows for an entirely new type of digital electronic aggression, cyberbullying, which takes place through chat rooms, instant messaging, social media, and other forms of digital electronic communication. Composition of peer groups, shifting demographics, changing societal norms, and modern technology are contextual factors that must be considered to understand and effectively react to bullying in the United States. Youth are embedded in multiple contexts and each of these contexts interacts with individual characteristics of youth in ways that either exacerbate or attenuate the association between these individual characteristics and bullying perpetration or victimization. Recognizing that bullying behavior is a major public health problem that demands the concerted and coordinated time and attention of parents, educators and school administrators, health care providers, policy makers, families, and others concerned with the care of children, this report evaluates the state of the science on biological and psychosocial consequences of peer victimization and the risk and protective factors that either increase or decrease peer victimization behavior and consequences.

*Climate Change and Stratospheric Ozone Depletion* May 24 2022 A balanced assessment based on currently available scientific knowledge of the effects that climate change may have on the environment in Europe and the health of its populations. Written in non-technical language the book responds to growing public and political concern about the consequences of such widely publicized phenomena as global warming and stratospheric ozone depletion. The book also responds to evidence that recent warming trends in Europe have already affected health. The book opens with a brief explanation of the causes of climate change and stratospheric ozone depletion followed by an overview of recent European and global initiatives aimed at monitoring trends and assessing their impact on health. The first main chapter on climate change in Europe summarizes currently documented trends and provides a scenario of possible changes throughout the rest of this century. The second and most extensive chapter reviews scientific evidence on specific health consequences. These include effects related to increased episodes of thermal stress and air pollution; changes in foodborne water-related vector-borne and rodent-borne diseases; mortality from floods and other weather extremes; and changes in the production of aeroallergens associated with respiratory disorders including asthma. Chapter three considers health effects linked to stratospheric ozone depletion giving particular attention to adverse effects on the eye and immune system and skin cancer. The remaining chapters discuss health effects expected in the next decade and outline actions urgently needed in the areas of policy monitoring and surveillance and research.

*Enough Is Enough* Feb 27 2020 This powerful book sets out arguments and an agenda of policy proposals for achieving a sustainable and prosperous, but non-growing economy, also known as a steady-state economy. The authors describe a plan for solving the major social and environmental problems which face us today on a finite planet with a rapidly growing population.

**Learning to be** Oct 05 2020

**The Great Derangement** Dec 27 2019 Are we deranged? The acclaimed Indian novelist Amitav Ghosh argues that future generations may well think so. How else to explain our imaginative failure in the face of global warming? In his first major book of nonfiction since *In an Antique Land*, Ghosh examines our inability—at the level of literature, history, and politics—to grasp the scale and violence of climate change. The extreme nature of today's climate events, Ghosh asserts, make them peculiarly resistant to contemporary modes of thinking and imagining. This is particularly true of serious literary fiction: hundred-year storms and freakish tornadoes simply feel too improbable for the novel; they are automatically consigned to other genres. In the writing of history, too, the climate crisis has sometimes led to gross simplifications; Ghosh shows that the history of the carbon economy is a tangled global story with many contradictory and counterintuitive elements. Ghosh ends by suggesting that politics, much like literature, has become a matter of personal moral reckoning rather than an arena of collective action. But to limit fiction and politics to individual moral adventure comes at a great cost. The climate crisis asks us to imagine other forms of human existence—a task to which fiction, Ghosh argues, is the best suited of all cultural forms. His book serves as a great writer's summons to confront the most urgent task of our time.

*Eating Earth* Mar 22 2022 *Eating Earth*, written both for environmentalists and animal activists, explores vital common ground between these two social justice movements - dietary choice. This highly readable book, complete with detailed figures, summary slides, and a touch of wry humor, exposes the weighty -

oftentimes astonishing and downright infuriating - environmental effects of hunting, fishing, and animal agriculture. With ecofeminist currents and an eye to human population concerns, *Eating Earth* is an inclusive, critical examination of ethics, environment, and dietary choice.--INSIDE COVER.

**The Global Guide to Animal Protection** Mar 30 2020 Raising awareness of human indifference and cruelty toward animals, *The Global Guide to Animal Protection* includes more than 180 introductory articles that survey the extent of worldwide human exploitation of animals from a variety of perspectives. In addition to entries on often disturbing examples of human cruelty toward animals, the book provides inspiring accounts of attempts by courageous individuals--including Jane Goodall, Shirley McGreal, Birute Mary Galdikas, Richard D. Ryder, and Roger Fouts--to challenge and change exploitative practices. As concern for animals and their welfare grows, this volume will be an indispensable aid to general readers, activists, scholars, and students interested in developing a keener awareness of cruelty to animals and considering avenues for reform. Also included is a special foreword by Archbishop Desmond Tutu, urging readers to seek justice and protection for all creatures, humans and animals alike.

**Managing aquifer recharge** Nov 18 2021

**Meatonomics** Jul 14 2021 In this "provocative and persuasive work," the health advocate reveals the dirty economics of meat—an industry that's eating into your wallet (Publishers Weekly). Few Americans are aware of the economic system that supports our country's supply of animal foods. Yet these forces affect us in a number of ways—none of them good. Though we only pay a few dollars per pound of meat at the grocery store, we pay far more in tax-fueled government subsidies—\$38 billion more, to be exact. And subsidies are just one layer of meat's hidden cost. But in *Meatonomics*, lawyer and sustainability advocate David Robinson Simon offers a path toward lasting solutions. Animal food producers maintain market dominance with artificially low prices, misleading PR, and an outsized influence over legislation. But counteracting these manipulations is easy—with the economic sanity of plant-based foods. In *Meatonomics*, Simon demonstrates: How government-funded marketing influences what we think of as healthy eating How much of our money is spent to prop up the meat industry How we can change our habits and our country for the better "Spectacularly important." —John Robbins, author of *The Food Revolution* "[A] well-researched, passionately written book." —Publishers Weekly

**The State of the World's Land and Water Resources for Food and Agriculture** Apr 30 2020 *The State of the World's Land and Water Resources for Food and Agriculture* is FAO's first flagship publication on the global status of land and water resources. It is an 'advocacy' report, to be published every three to five years, and targeted at senior level decision makers in agriculture as well as in other sectors. SOLAW is aimed at sensitizing its target audience on the status of land resources at global and regional levels and FAO's viewpoint on appropriate recommendations for policy formulation. SOLAW focuses on these key dimensions of analysis: (i) quantity, quality of land and water resources, (ii) the rate of use and sustainable management of these resources in the context of relevant socio-economic driving factors and concerns, including food security and poverty, and climate change. This is the first time that a global, baseline status report on land and water resources has been made. It is based on several global spatial databases (e.g. land suitability for agriculture, land use and management, land and water degradation and depletion) for which FAO is the world-recognized data source. Topical and emerging issues on land and water are dealt with in an integrated rather than sectoral manner. The implications of the status and trends are used to advocate remedial interventions which are tailored to major farming systems within different geographic regions.

**A Thousand Deaths** Feb 09 2021 Science fiction stories that offer "a poignant glimpse into the author's psyche . . . this bittersweet collection [is] one to be cherished" (Publishers Weekly). When we first meet Courane, he must face down TECT, the self-aware computer that has come to control Earth and its colonial planets. Exiled to Planet D, Courane races to cure the debilitating disease that attacks each of the planet's residents, even as his own memory begins to fade. Unfortunately, his only source of information about the illness is TECT itself, and the computer's agenda doesn't seem to line up with Courane's. In the seven other stories contained in *A Thousand Deaths*, Courane begins to blur reality and fiction as Effinger expertly plays with narrative conventions. However, these are not simply the whims of a science fiction writer; they are the frameworks the Nebula and Hugo Award-nominated author uses to answer questions about existence no one else even thought to ask. While George Alec Effinger's *Budayeen* novel *When*

Gravity Fails is perhaps his most famous work, his lesser-known novel *The Wolves of Memory* remained his favorite. In it, he introduced readers to Sandor Courane, an everyman and Effinger stand-in who struggles as he swims against the currents of fate. In life and in his multiple deaths, Sandor Courane serves as the unifying force in this collection of Effinger's stories, starting with *The Wolves of Memory* and getting ever more clever and off the wall from there.

*History of International Organizations' Work with Soybeans and Soyfoods (1914-2021)* Jun 25 2022 The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographic index. 81 photographs and illustrations - mostly color. Free of charge in digital PDF format.

*The Pig in Thin Air* Jun 13 2021 Lockwood explores the dimensions of embodiment from his own body to those of the animals he bears witness to, from bodies of knowledge and those who place themselves in the way of the machinery of death, through to our physical efforts to make sense of a world where so much is desensitized, disembodied, and fragmented. Part of Lantern's {bio}graphics series.

*Global Environmental Change* Apr 23 2022 Global environmental change often seems to be the most carefully examined issue of our time. Yet understanding the human side—human causes of and responses to environmental change—has not yet received sustained attention. *Global Environmental Change* offers a strategy for combining the efforts of natural and social scientists to better understand how our actions influence global change and how global change influences us. The volume is accessible to the nonscientist and provides a wide range of examples and case studies. It explores how the attitudes and actions of individuals, governments, and organizations intertwine to leave their mark on the health of the planet. The book focuses on establishing a framework for this new field of study, identifying problems that must be overcome if we are to deepen our understanding of the human dimensions of global change, presenting conclusions and recommendations.

*The Precautionary Principle* Jan 08 2021 The purpose of this publication is to provide the background rationale and support for WHO's working paper *Dealing with uncertainty - how can the precautionary principle help protect the future of our children?*, prepared for the Fourth Ministerial Conference on Environment and Health held in Budapest, Hungary, in June 2004. The debate around the precautionary principle has provided many insights into how to improve public health decision-making under conditions of uncertainty. This publication should further support approaches to attaining the concurrent goals of protecting adults, children and future generations and the ecosystems on which we depend and enhancing economic development, sustainability and innovation in science, research and policy. [Ed.]

**Ethics and Drug Resistance: Collective Responsibility for Global Public Health** Jun 20 2019 This Open Access volume provides in-depth analysis of the wide range of ethical issues associated with drug-resistant infectious diseases. Antimicrobial resistance (AMR) is widely recognized to be one of the greatest threats to global public health in coming decades; and it has thus become a major topic of discussion among leading bioethicists and scholars from related disciplines including economics, epidemiology, law, and political theory. Topics covered in this volume include responsible use of antimicrobials; control of multi-resistant hospital-acquired infections; privacy and data collection; antibiotic use in childhood and at the end of life; agricultural and veterinary sources of resistance; resistant HIV, tuberculosis, and malaria; mandatory treatment; and trade-offs between current and future generations. As the first book focused on ethical issues associated with drug resistance, it makes a timely contribution to debates regarding practice and policy that are of crucial importance to global public health in the 21st century.

**Eleven** Oct 25 2019 Eleven billion people will crowd this marvelous planet by century's end. If the global economy were to grow five-fold during this period as predicted, humanity's ecological footprint would exceed Earth's biocapacity by 400%. We need to chart a new course to the future. The sweeping changes that make a 'full world' work—involving dual processes of destruction and reconstruction—will transform global culture, agriculture, and ultimately the human race. ELEVEN is a call to consciousness. Only an 'ethical revolution' will allow us to carry forward an ever-advancing civilization. Paul Hanley proposes a transformational model that will help individuals, institutions, and communities make an eleven-billion world work for everyone—and the planet.

*Rewilding Our Hearts* Dec 19 2021 In wildlife conservation, rewilding refers to restoring habitats and

creating corridors between preserved lands to allow declining populations to rebound. Marc Bekoff, one of the world's leading animal experts and activists, here applies rewilding to human attitudes. *Rewilding Our Hearts* invites readers to do the essential work of becoming reenchanted with the world, acting from the inside out, and dissolving false boundaries to truly connect with both nature and themselves.

**Comfortably Unaware** Sep 28 2022 In *Comfortably Unaware*, Dr. Richard Oppenlander tackles the crucial issue of global depletion as it relates to food choice. We should all be committed, he tells us, to understanding the reality and consequences of our diet, the footprint it makes on our environment, and seek food products that are in the best interest of all living things. His forthright information and stark mental images are often disturbing-and that's how it should be. As the guardians of Planet Earth, we need to be shaken out of our complacency, to stop being comfortably unaware, and to understand the measures we must take to ensure the health and well-being of our planet-and of ourselves. Oppenlander *History of Tofu and Tofu Products (1995-2022)* Sep 16 2021 The world's most comprehensive, well documented, and well illustrated book on this subject. With extensive subject and geographic index. 292 photographs and illustrations - mostly color. Free of charge in digital PDF format.

**Willpower** Jul 02 2020 Can you resist everything except temptation? In a hedonistic age full of distractions, it's hard to possess willpower - or in fact even understand why we should need it. Yet it's actually the most important factor in achieving success and a happy life, shown to be more significant than money, looks, background or intelligence. This book reveals the secrets of self-control. For years the old-fashioned, even Victorian, value of willpower has been disparaged by psychologists who argued that we're largely driven by unconscious forces beyond our control. Here Roy Baumeister, one of the world's most esteemed and influential psychologists, and journalist John Tierney, turn this notion on its head. They show us that willpower is like a muscle that can be strengthened with practice. The latest laboratory work reveals that self-control has a physical basis and so is dramatically affected by simple things such as eating and sleeping - to the extent that a life-changing decision may go in different directions depending on whether it's made before or after lunch. You will discover how babies can be taught willpower, the joys of the to-don't list, the success of Alcoholics Anonymous, the pointlessness of diets and the secrets to David Blaine's stunts. There are also fascinating personal stories, from explorers, students, soldiers, ex-addicts and parents. Based on years of psychological research and filled with practical advice, this book will teach you how to gain from self-control without pain, and discover the very real power in willpower. The results are nothing short of life-changing.

Global Warming and East Asia Aug 23 2019 *Global Warming and East Asia* analyses the domestic politics, foreign policy and international relations of climate change in East and Southeast Asia. The countries of this important region are often disproportionately affected by climate change and, as they expand and develop, their contribution to the problem grows. The contributors investigate the increasingly widespread and disparate efforts to address global warming at international, national and local levels, and in so doing increase our understanding of a region vital to mitigating and coping with climate change. This unique volume includes in-depth studies of China and Japan, two of the most important countries in East Asia with regard to global warming, and examines the role of East and Southeast Asian countries, such as Indonesia and the Philippines, in combating the problem.

**Comfortably Unaware** Aug 27 2022 In *Comfortably Unaware*, Dr. Richard Oppenlander tackles the crucial issue of global depletion as it relates to food choice. We should all be committed, he tells us, to understanding the reality and consequences of our diet, the footprint it makes on our environment, and seek food products that are in the best interest of all living things. His forthright information and stark mental images are often disturbing-and that's how it should be. As the guardians of Planet Earth, we need to be shaken out of our complacency, to stop being comfortably unaware, and to understand the measures we must take to ensure the health and well-being of our planet-and of ourselves. Oppenlander

Sleep Disorders and Sleep Deprivation Aug 03 2020 Clinical practice related to sleep problems and sleep disorders has been expanding rapidly in the last few years, but scientific research is not keeping pace. Sleep apnea, insomnia, and restless legs syndrome are three examples of very common disorders for which we have little biological information. This new book cuts across a variety of medical disciplines such as neurology, pulmonology, pediatrics, internal medicine, psychiatry, psychology, otolaryngology, and nursing, as well as other medical practices with an interest in the management of sleep pathology.

This area of research is not limited to very young and old patients—sleep disorders reach across all ages and ethnicities. *Sleep Disorders and Sleep Deprivation* presents a structured analysis that explores the following: Improving awareness among the general public and health care professionals. Increasing investment in interdisciplinary somnology and sleep medicine research training and mentoring activities. Validating and developing new and existing technologies for diagnosis and treatment. This book will be of interest to those looking to learn more about the enormous public health burden of sleep disorders and sleep deprivation and the strikingly limited capacity of the health care enterprise to identify and treat the majority of individuals suffering from sleep problems.

**Virtual Menageries** Aug 15 2021 The close interdependency of animal emissaries and new media from early European colonial encounters with the exotic to today's proliferation of animals in digital networks. From cat videos to corporate logos, digital screens and spaces are crowded with animal bodies. In *Virtual Menageries*, Jody Berland examines the role of animals in the spread of global communications. Her richly illustrated study links the contemporary proliferation of animals on social media to the collection of exotic animals in the formative years of transcontinental exploration and expansion. By tracing previously unseen parallels across the history of exotic and digital menageries, Berland shows how and why animals came to bridge peoples, territories, and technologies in the expansion of colonial and capitalist cultures. Berland's genealogy of the virtual menagerie begins in 1414 when a ruler in Bengal sent a Kenyan giraffe to join a Chinese emperor's menagerie. It maps the beaver's role in the colonial conquest of Canada and examines the appearances of animals in early moving pictures. The menagerie is reinvented for the digital age when image and sound designers use parts or images of animals to ensure the affective promise and commercial spread of an emergent digital infrastructure. These animal images are emissaries that enliven and domesticate the ever-expanding field of mediation. *Virtual Menageries* offers a unique account of animals and animal images as mediators that encourage complicated emotional, economic, and aesthetic investment in changing practices of connection.

*Comfortably Unaware* Oct 29 2022 With unapologetic disclosures, Oppenlander professes his concern for the state of the planet, while charging that many renown spokespersons who tout responsible and sustainable living are often mismanaging the information, or unwilling to tell the whole story. Richard Oppenlander supports a plant-based diet that he claims provides optimal health for our bodies and our planet. His book *COMFORTABLY UNAWARE* introduces us to our responsibility in global depletion, and encourages us to think about our food choices with every bite.

**No Wishing Required** Apr 11 2021 *No Wishing Required* is the story of a project team navigating the complex world of enterprise software implementations in their quest for project success. Led by Jenny, the ambitious, yet sometimes naive project manager, *No Wishing Required* takes the reader through her journey as she struggles with a major system implementation that is on the brink of failure to the challenges of the company's latest project: a complex multi-step system upgrade/transformation project. Through the guidance of her manager and mentor, Bill Parker, Jenny discovers that there is a way to assure project success that really works: collaborative intervention. While it is fiction, the experiences and characters in *No Wishing Required* will resonate with anyone who has ever participated on a large business systems implementation project team. Through the story of Jenny, Bill and the project team, you'll discover the power of collaborative intervention what it is and how to use it. You'll find a step-by-step process complete with tools and techniques for proactive and effective project leadership. Short of a Genie, collaborative intervention is the only methodology designed to help you avert project failure before it occurs. And best of all, there's no wishing required.

**Investing in a Sustainable World** Jan 28 2020 For business and investors, there's no doubt about it: The smart money is going green...and the growing movement toward ecologically forward-thinking companies is quickly becoming bigger and bigger. What may be surprising to some is that socially responsible organizations aren't just doing the right thing for the environment, they are also paying off financially, making their investors money and increasing the bottom line. *Investing in a Sustainable World* offers clear proof, through facts, figures, and hard documentation, that "going green" leads directly to better stock market performance...and that investors and companies who ignore it will, in fact, lose money. The book reveals the most powerful global megatrends—from the ongoing focus on emerging markets to natural resource depletion—which are transforming the very basis on which companies will compete, and

offers an approach to sustainability-enhanced investing beneficial to both investors and companies. Revolutionary and backed by undeniable statistics, this book shows the clear link between sustainability initiatives and clear-cut profitability.

*The Ultimate Betrayal* Jan 20 2022 Drawing on peer-reviewed research, worker and rescuer testimony, and encounters with the farm animals themselves, *The Ultimate Betrayal* discusses the recent shift in raising and labeling animals processed for food and the misinformation surrounding this new method of farming. This book explores how language manipulates consumers concepts about sustainability, humane treatment, and what is truly healthy. It answers important questions surrounding the latest small-scale farming fad: Is this trend the answer to the plentiful problems of raising animals for food? What do the labels actually mean? Are these products humane, environmentally friendly, or healthy? Can there really be happy meat, milk, or eggs? With case studies and compelling science, *The Ultimate Betrayal* increases awareness of the issues surrounding our treatment of animals, global health, and making better food choices. *The Ultimate Betrayal* is a well-rounded and thoroughly-researched book that touches the heart with an honest and unflinching look at the reality behind humane labels. With real-life examples from multiple viewpoints and thought-provoking philosophical underpinnings, *The Ultimate Betrayal* is a must-read for anyone interested in ethical food choices. Dawn Moncrief, founder, A Well-Fed World
