A Hero'S Journey Nov 12 2020 What's a hero? Heroes come in all shapes, sizes, ages, and can be either male or female. They are everyday people in our communities and society. The label hero is given to someone for many reasons. The first thing that comes to mind are acts of bravery on the battlefield a police officer in the line of duty or a firefighter pulling someone from a burning building. The word hero is a very complex term, and it has evolved overtime. A hero can be someone who inspires others to do something good for themselves and others in their community. A hero is one who sets high standards for himself or herself, someone whose deeds and accomplishments are worthy of praise by others. A hero is one who overcomes tremendous odds against him and inspires others to do the same. He is a person who is not afraid to stand up for what he believes is right, someone who helps when the benefit and praise is knowingly going to someone else. They are soldiers who choose to defend our country while knowing and understanding that they may not survive their journey of service to their country. This book is by Mose M. Kinsey.

Lagoon Environments Around the World Apr 17 2021 Lagoon Environments Around the World - A Scientific Perspective covers a wide range of topics. Typically bordering between land and sea, lagoons are among the most diversely utilized waterways on the planet. Lagoons are extremely important environments socio-economically, and their usage places ever increasing stress on these very sensitive aquatic regions. The effective management of shallow aquatic environments requires a detailed scientific understanding of the various contributory natural processes. This has both environmental and economic implications, especially where there is any anthropogenic involvement. This book draws on international scientific research to examine the following lagoon related issues: classification, circulation hydrodynamics, ecosystems, sedimentation, anthropogenic

stresses, and response to extreme events. The research was carried out by researchers who specialize in shallow water processes and related issues. Small Flying Drones Mar 17 2021 This book focuses on small flying drones and their applications in conducting geographic surveys. Scholars and professionals will discover the potential of this tool, and hopefully develop a conceptual and methodological framework for doing the following things: a) Translate their data acquisition needs into specifications. (b) Use the developed specifications to choose the best accessible configuration for their drones, and (c) Design and organize effective and low-cost field deployment and flight operations by integrating technical aspects with regulatory and research requirements. Readers can apply this knowledge to work in cartography, environmental monitoring and analysis, land-use studies and landscape archaeology. Particular attention is also given to the reasons why a drone can dramatically boost a geographer's capability to understand geographic phenomena both from hard-science and humanities-oriented approach.

Looking for a Hero Jul 01 2022 Widely acclaimed as the Vietnam War's most highly decorated soldier, Joe Ronnie Hooper in many ways serves as a symbol for that conflict. His troubled, tempestuous life paralleled the upheavals in American society during the 1960s and 1970s, and his desperate quest to prove his manhood was uncomfortably akin to the macho image projected by three successive presidents in their "tough" policy in Southeast Asia. Looking for a Hero extracts the real Joe Hooper from the welter of lies and myths that swirl around his story; in doing so, the book uncovers not only the complicated truth about an American hero but also the story of how Hooper's war was lost in Vietnam, not at home. Extensive interviews with friends, fellow soldiers, and family members reveal Hooper as a complex, gifted, and disturbed man. They also expose the flaws in his most famous and treasured accomplishment: earning the Medal of Honor. In the distortions, half-truths, and outright lies that mar Hooper's medal of honor file, authors Peter Maslowski and Don Winslow find a painful reflection of the army's inability to be honest with itself and the American public, with all the dire consequences that this dishonesty ultimately entailed. In the inextricably linked stories of Hooper and the Vietnam War, the nature of that deceit, and of America's defeat, becomes clear.

GoPro Karma Drone: Learning the Basics Sep 03 2022 The GoPro Karma Drone is the first foldable drone. The announcement was made in December of 2015, but the long-awaited GoPro is not yet up for purchase until October of this year. It is lightweight and easy to use when compared to other drones currently on the market. It is a professional-grade drone that can be used by anyone and comes with its own backpack. In addition, the GoPro Karma drone requires no assembly, simply remove from the backpack, unfold the propeller and you are ready to use. The parts can be easily replaced if damaged and the GoPro Karma is able to stand up to everyday wear- and- tear.

Mexican Folk Narrative from the Los Angeles Area Dec 14 2020 Urban Los Angeles is the setting in which Elaine Miller has collected her narratives from Mexican-Americans. The Mexican folk tradition, varied and richly expressive of the inner life not only of a people but also of the individual as each lives it and personalizes it, is abundantly present in the United States. Since it is in the urban centers that most Mexican-Americans have lived, this collection represents an important contribution to the study of that tradition and to the study of the changes urban life effects on traditional folklore. The collection includes sixty-two legendary narratives and twenty traditional tales. The legendary narratives deal with the virgins and saints as well as with such familiar characters as the vanishing hitchhiker, the headless horseman, and the llorona. Familiar characters appear in the traditional tales—Juan del Oso, Blancaflor, Pedro de Ordimalas, and others. Elaine Miller concludes that the traditional tales are dying out in the city because tale telling itself is not suited to the fast pace of modern urban life, and the situations and characters in the tales are not perceived by the people to be meaningfully related to the everyday challenges and concerns of that life. The legendary tales survive longer in an urban setting because, although containing fantastic elements, they are related to the beliefs and hopes of the narrator—even in the city one may be led to buried treasure on some dark night by a mysterious woman. The penchant of the informants for the fantastic in many of their tales often reflects their hopes

and fears, such as their dreams of suddenly acquiring wealth or their fears of being haunted by the dead. Miller closely observes the teller's relation to the stories—to the duendes, the ánimas, Death, God, the devil—and she notes the tension on the part of the informant in his relation to their religion. The material is documented according to several standard tale and motif indices and is placed within the context of the larger body of Hispanic folk tradition by the citation of parallel versions throughout the Hispanic world. The tales, transcribed from taped interviews, are presented in colloquial Spanish accompanied by summaries in English.

Experiments in Reduced Gravity Sep 30 2019 Experiments in Reduced Gravity: Sediment Settling on Mars is the first book to be published that reflects experiments conducted on Martian geomorphology in reduced gravity. This brief yet important book on sediment experiments assesses the theoretical and empirical foundation of the models used to analyze the increasing information we have on the past geography on Mars. The book also evaluates the need to develop new methods for analyzing new information by providing a conceptual outline and a case study on how experiments can be used to test current theoretical considerations. The conceptual approach to identifying the need for and role of experiments will be of interest to planetary scientists and geoscientists not necessarily involved with Mars, but those using experiments in their research who can apply the book's concepts. Includes figures, diagrams, illustrations, and photographs to vividly explore experiments and outcomes in reduced gravity Provides an outline of planned experiments and questions related to Martian geomorphology Features results from the MarsSedEx 1 Experiment in 2012

Legion of Super-Heroes: the Silver Age Omnibus Vol. 3 Feb 25 2022 Return to the 30th century--a time when the universe is under the protection of the greatest group of teenage heroes in history. In these tales from the late 1960s, Superboy and his Legionnaire friends must face Mordru, the Dominators, the Fatal Five, and more. With stories written primarily by Jim Shooter (at the time only a teenager himself) and art by Win Mortimer, Curt Swan, and others, this collection contains such milestones as the Legion's origin story and the introduction of Shadow Lass! This final omnibus volume finishes out the Legion's Silver Age, collecting stories from Adventure Comics #361-380; Superman's Pal Jimmy Olsen j Superboy " and Action Comics #378-387, #389-392.

The Greater Chaco Landscape Oct 31 2019 Since the mid-1970s, government agencies, scholars, tribes, and private industries have attempted to navigate potential conflicts involving energy development, Chacoan archaeological study, and preservation across the San Juan Basin. The Greater Chaco Landscape examines both the imminent threat posed by energy extraction and new ways of understanding Chaco Canyon and Chaco-era great houses and associated communities from southeast Utah to west-central New Mexico in the context of landscape archaeology. Contributors analyze many different dimensions of the Chacoan landscape and present the most effective, innovative, and respectful means of studying them, focusing on the significance of thousand-year-old farming practices; connections between early great houses outside the canyon and the rise of power inside it; changes to Chaco's roads over time as observed in aerial imagery; rock art throughout the greater Chaco area; respectful methods of examining shrines, crescents, herraduras, stone circles, cairns, and other landscape features in collaboration with Indigenous colleagues; sensory experiences of ancient Chacoans via study of the sightlines and soundscapes of several outlier communities; and current legal, technical, and administrative challenges and options concerning preservation of the landscape. An unusually innovative and timely volume that will be available both in print and online, with the online edition incorporating video chapters presented by Acoma, Diné, Zuni, and Hopi cultural experts filmed on location in Chaco Canyon, *The Greater Chaco Landscape* is a creative collaboration with Native voices that will be a case study for archaeologists and others working on heritage management issues across the globe. It will be of interest to archaeologists specializing in Chaco and the Southwest, interested in remote sensing and geophysical landscape-level investigations, and working on landscape preservation and phenomenological investigations such as viewsapes and soundscapes. Load Testing of Bridges: Two Volume Set Mar 29 2022 Load Testing of Bridges, featuring contributions from almost fifty authors from around the world across two interrelated volumes, deals with the practical aspects, the scientific developments, and the international views on the topic of load testing of bridges. Volume 12, Load Testing of Bridges: Current practice and Diagnostic Load Testing, starts with a background to bridge load testing, including the historical perspectives and evolutions, and the current codes and guidelines that are governing in countries around the world. The second part of the book deals with preparation, execution, and post-processing of load tests on bridges. The third part focuses on diagnostic load testing of bridges. Volume 13, Load Testing of Bridges: Proof Load Testing and the Future of Load Testing, focuses first on proof load testing of bridges. It discusses the specific aspects of proof load testing during the preparation, execution, and post-processing of such a test (Part 1). The second part covers the testing of buildings. The third part discusses novel ideas regarding measurement techniques used for load testing. Methods using non-contact sensors, such as photography- and video-based measurement techniques are discussed. The fourth part discusses load testing in the framework of reliability-based decision-making and in the framework of a bridge management program. The final part of the book summarizes the knowledge presented across the two volumes, as well as the remaining open questions for research, and provides practical recommendations for engineers carrying out load tests. This work will be of interest to researchers and academics in the field of civil/structural engineering, practicing engineers and road authorities worldwide.

Sports in the Pulp Magazines Jul 09 2020 From the late 1800s through the first half of the 1900s, pulp magazines—costing a dime and filled with both fiction and nonfiction—were a staple of American life. Though often overlooked by popular culturalists, sports were one of the staples of the pulp scene; such standards as the National Police Gazette and All-Story carried some sports stories, and several publications, such as Sport Story Magazine, were entirely devoted to them. An overview of the pulps is followed by an examination of those devoted to sports: how they came into being, the development of the genre, the popularity of its heroes, and coverage of real-life events. The roles of editors, writers, artists, and publishers are then fully covered. A chapter on Street & Smith, the foremost publisher of sports pulps, follows, while a concluding chapter discusses the reasons for the demise of the pulps in the early 1950s.

Entrepreneurial Marketing Jun 19 2021 How do you sell an innovative product to a market that does not yet exist? Entrepreneurial businesses often create products and services based on radically new technology that have the power to change the marketplace. Existing market research data will be largely irrelevant in these cases, making sales and marketing of innovative new products especially challenging to entrepreneurs.

Entrepreneurial Marketing focuses on this challenge. Classic core marketing concepts, such as segmentation, positioning and the marketing mix undergo an 'extreme makeover' in the context of innovative products hitting the market. Edwin J. Nijssen stresses principles of affordable loss, experimentation and adjustment for emerging opportunities, as well as cooperation with first customers. Containing many marketing examples of successful and cutting edge innovations (including links to websites and videos on the Internet), useful lists of key issues and instructions on how to make a one-page marketing plan, *Entrepreneurial Marketing: An Effectual Approach* provides a vital guide to successfully developing customer demand and a market for innovative new products. This second edition has been thoroughly expanded with: a one-page marketing plan which now focuses on the three entrepreneurial challenges that can be easily adapted; coverage of the customer development process; and updated references and new examples. This book provides students and entrepreneurs with the fundamental tools to succeed in marketing.

Engineering Design Applications III Apr 05 2020 This book provides an update on recent advances in various areas of modern engineering design, such as mechanical, materials, computer, and process engineering, which provide the foundation for the development of improved structures, materials, and processes. The modern design cycle is characterized by the interaction of different disciplines and a strong shift toward computer-based approaches involving only a small number of experiments for verification purposes. A major driver for this development is the increased demand for cost reduction, which is also connected to environmental demands. In the transportation industry (e.g. automotive or aerospace), where there is a demand for greater fuel efficiency, one solution is lighter structures and/or improved processes for energy conversion. Another emerging

area is the interaction of classical engineering with the health and medical sector.
