Computer-Generated Images Apr 28 2022 Research, development, and applications in computer graphics have dramatically expanded in recent years. Because of decreasing prices, superior hardware is now being used and image quality is better than ever. Many people now require image-synthesis techniques and software for their applications. Moreover, the techniques of computer animation have become very popular. In this book,

we present a wide range of applications of computer graphics. This book is a collection of 44 papers in various areas of computer graphics selected from papers presented at Graphics Interface '85. Graphics Interface '85, held from May 27 to 31 in Montreal, was the first truly international computer graphics conference in Canada. This year, for the first time, the conference was presented jointly by the Computer Graphics Society and the Canadian Man-Computer Communications Society. This new arrangement gave the conference international scope. The conference was sponsored by the Department of Communications in Ottawa, the Department of Science and Technology in Quebec, Supply and Services Canada, the Natural Sciences and Engineering Research Council of Canada, Hydro-Quebec, the "Association Canadienne Française pour l'Avancement des Sciences", and the Canadian Broadcasting Corporation. Graphics Interface '85 was organized by "l'Ecole des Hautes Etudes Commerciales" of the University of Montreal. Over 100 papers were submitted to the conference, but 64 were selected by the international program committee for presentation. This book contains new expanded versions of the papers.

Serious Violations of Human Rights Mar 16 2021 This book analyses the use of the expression 'serious violations of human rights', and similar ones, such as 'gross' or 'grave', in international practice. It highlights some of the recurring responses and consequences to such violations and suggests that a new special regime - eponymous to the above-mentioned expression - was formed. This special regime is understood as substantively limited to a very specific issue-area of human rights violations. Within this regime, a series of monitoring mechanisms and procedures are in place to highlight, document, and record such violations; specific measures are taken to enforce compliance; and certain consequences arise focused on remedying the victims of such violations. As such, this special regime is comprised of at least four thinly interconnected components: the substantive, the monitoring, the enforcement, and the remedial ones. This monograph constitutes a first step towards the recognition of such a regime, allowing for more constructive and coherent elaboration in the future. Practice around this category of violations may well evolve in a different direction than the one suggested here. However, what becomes apparent from this work is that the serious violations of human rights are a key notion in the international legal order as it allows the international community to depict those factual situations requiring its attention and action.

User Interface Management and Design Apr 04 2020 This volume is a record of the Workshop on User Interface Management Systems and Environments held at INESC, Lisbon, Portugal, between 4 and 6 June 1990. The main impetus for the workshop came from the Graphics and Interaction in ESPRIT Technical Interest Group of the European Community ESPRIT Programme. The Graphics and Interaction in ESPRIT Technical Interest Group arose from a meeting of researchers held in Brussels in May 1988, which identified a number of technical areas of common interest across a significant number of ESPRIT I and ESPRIT II projects. It was recognized that there was a need to share information on such activities between projects, to disseminate results from the projects to the world at large, and for projects to be aware of related activities elsewhere in the world. The need for a Technical Interest Group was confirmed at a meeting held during ESPRIT Technical Week in November 1989, attended by over 50 representatives from ESPRIT projects and the Commission of the European Communities. Information exchange sessions were organized during the EUROGRAPHICS '89 conference, with the intention of disseminating information from ESPRIT projects to the wider research and development community, both in Europe and beyond.

Virtual Freedom Dec 13 2020 Communications giants like Google, Comcast, and AT&T enjoy increasingly unchecked control over speech. As providers of broadband access and Internet search engines, they can control online expression. Their online content restrictions—from obstructing e-mail to censoring cablecasts—are considered legal because of recent changes in free speech law. In this book, Dawn Nunziato criticizes recent changes in free speech law in which only the government need refrain from censoring speech, while companies are permitted to self-regulate. By enabling Internet providers to exercise control over content, the Supreme Court and the FCC have failed to protect the public's right to access a broad diversity of content. Nunziato argues that regulation is necessary to ensure the free flow of information and to render the First Amendment meaningful in the twenty-first century. This book offers an urgent call to action, recommending immediate steps to preserve our free speech rights online.
