Discovering Ancient Rome Jan 31 2020 Rome was the city that conquered the entire Mediterranean world. For almost 500 years, it presided over that world, shaping it, and providing instruction for all those who came later. The city fell to the barbarians, and the empire ceased to exist, but the ideas and ideals that built both the city and the empire can still be felt today. This book presents the fascinating empire of Ancient Rome, from its rise to its fall. Readers will learn how Romans lived their daily lives, as well as the accomplishments they contributed that continue to influence the world today.

Routledge Handbook of Naval Strategy and Security Apr 03 2020 This new handbook provides a comprehensive overview of the issues facing naval strategy and security in the twenty-first century. Featuring contributions from some of the world's premier researchers and practitioners in the field of naval strategy and security, this handbook covers naval security issues in diverse regions of the world, from the Indian Ocean and the Mediterranean to the Arctic and the piracy-prone waters off East Africa's coast. It outlines major policy challenges arising from competing claims, transnational organized crime and maritime terrorism, and details national and alliance reactions to these problems. While this volume provides detailed analyses on operational, judicial, and legislative consequences that contemporary maritime security threats pose, it also places a specific emphasis on naval strategy. With a public very much focused on the softer constabulary roles naval forces play (such as humanitarian assistance, disaster relief, naval diplomacy, maintenance of good order at sea), the overarching hard-power role of navies has been pushed into the background. In fact, navies and seapower have been notably absent from many recent academic discussions and deliberations of maritime security. This handbook provides a much-desired addition to the literature for researchers and analysts in the social sciences on the relationship between security policy and military means on, under, and from the sea. It comprehensively explains the state of naval security in this maritime century and the role of naval forces in it. This book will be of much interest to students of naval security and naval strategy, security studies and IR, as well as practitioners in the field.

Public Speaking: The Evolving Art Jul 19 2021 Coopman and Lull's PUBLIC SPEAKING: THE EVOLVING ART, 4th Edition, combines time-tested techniques with innovative variations on the well-respected traditions of public speaking instruction to equip you with the skills you need to become a confident, competent, and ethical public speaker. It illustrates the evolution of public speaking as an art form -- from Greek and Roman traditions to the most contemporary forms of public address, including the use of presentation media. Packed with examples from popular culture, it analyzes the public speaking success of such contemporary figures as Bernie Sanders and Malala Yousafzai. It also includes numerous prompts to help you put your new skills into practice -- in the classroom, community, and professional context. Commodity Risk Management Apr 27 2022 This book aims to cover the following general topics: development and assessment of theories for evaluating commodity risk; the role of derivative securities in managing commodity risk; and, an assessment of the actual management of commodity risk in specific situations. The primary contribution of the book is the explicit development of the often overlooked connection between risk management and speculation. The central theme is to demonstrate that commodity risk management decisions require an in depth understanding of speculative strategies. To this end, this book aims to provide a unified treatment of important concepts and techniques that are useful in applying derivative securities in the management of risk arising in commodity markets.

Community Matters: Service-Learning in Engaged Design and Planning Jul 27 2019 Winner of the EDRA 2015 Book Award! Community Matters: Service Learning in Engaged Design and Planning explores issues that resonate with a diverse group of design and planning educators drawn to the challenge of supporting greater community building and empowerment while combining learning with practice. The book explores such questions as: How do we foster mutuality and reciprocity in community-academy partnerships? What conflicts, challenges, limits and obstacles do we face in our service-learning studios and projects? What evidence do we have of our impacts on students and communities and how are we responding? How are we being attentive to the contemporary environmental and societal issues? What is our role as both designers and agents of societal change? How are we innovating to enable greater capacities for individuals, future practitioners and communities? This book provides compelling evidence that educators should be adopting engaged pedagogies, research methods and theories through which they can bring together education, practice and scholarship at the boundary of community and academy.

*Microsoft Office 2010: Essentials Jul 31 2022 Microsoft Office 2010: Essentials is an excellent survey of Office 2010 for introductory-level students. Though written for beginning computer users, this text provides an in-depth look at computer concepts and the Office 2010 applications. This full color solution offers: * New exercises incorporating work-readiness skills that reflect SCANS competencies * Online concept review quizzes offering immediate student feedback * Web simulations for Outlook and exercises that cannot always be done in the lab * Seamless integration of video tutorials for every topic in every lesson * Four new case studies feature progressive themes and focus on situations that learners are likely to encounter You'll find the same, relevant topics from previous editions, along with plenty of features new to Office 2010. In the first lessons, students are introduced to basic computer concepts, including components and computer types, hardware and software, and computer security. The Windows lesson includes Windows XP, Vista, and 7, so you don't have to worry if your lab or your student doesn't have a particular version. A new Online Collaboration lesson covers Web 2.0, cloud computing, social networking, and threaded discussions. The following lessons introduce the major Office 2010 applications: Word, Excel, PowerPoint, and Access. The text concludes with a comprehensive, Capstone Integration Project that incorporate all the skills learned in the book.*

The Future of Nursing Jun 05 2020 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the

greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Out of Our Minds Jan 01 2020 Ken Robinson argues that organisations everywhere are trying to fix a problem that originates in schools and universities. Many people leave education with no idea what their creative abilities and strengths are. In a powerful and original way, he says why this is and what organisations and individuals can do immediately to recover their creative talents. Revised edition will have following changes: Updated to accommodate recent changes to the education system (internationally), and to include more recent examples and case studies Focus of the book shifted to give more international examples and refer to US education system; to appeal to overseas markets. Some of the heavier academic content has been stripped out and content has been adapted for more consumer/think-piece market.

Improving the Decision Making Abilities of Small Unit Leaders Nov 22 2021 For the past decade, the U.S. Marine Corps and its sister services have been engaged in what has been termed "hybrid warfare," which ranges from active combat to civilian support. Hybrid warfare typically occurs in environments where all modes of war are employed, such as conventional weapons, irregular tactics, terrorism, disruptive technologies, and criminality to destabilize an existing order. In August 2010, the National Research Council established the Committee on Improving the Decision Making Abilities of Small Unit Leaders to produce Improving the Decision Making Abilities of Small Unit Leaders. This report examines the operational environment, existing abilities, and gap to include data, technology, skill sets, training, and measures of effectiveness for small unit leaders in conducting enhanced company operations (ECOs) in hybrid engagement, complex environments. Improving the Decision Making Abilities of Small Unit Leaders also determines how to understand the decision making calculus and indicators of adversaries. Improving the Decision Making Abilities of Small Unit Leaders recommends operational and technical approaches for improving the decision making abilities of small unit leaders, including any acquisition and experimentation efforts that can be undertaken by the Marine Corps and/or by other stakeholders aimed specifically at improving the decision making of small unit leaders. This report recommends ways to ease the burden on small unit leaders and to better prepare the small unit leader for success. Improving the Decision Making Abilities of Small Unit Leaders also identifies a responsible organization to ensure that training and education programs are properly developed, staffed, operated, evaluated, and expanded.

The Wealth of Nations May 05 2020 THE MOST INFLUENTIAL BOOK ON MODERN ECONOMICS The Wealth of Nations is an economics book like no other. First published in 1776, Adam Smith's groundbreaking theories provide a recipe for national prosperity that has not been bettered since. It assumes no prior knowledge of its subject, and over 200 years on, still provides valuable lessons on the fundamentals of economics. This keepsake edition is a selected abridgement of all five books, and includes an Introduction by Tom Butler-Bowdon, drawing out lessons for the contemporary reader, a Foreword from Eamonn Butler, Director of the Adam Smith Institute, and a Preface from Dr. Razeen Sally of the London School of Economics.

Renewable Energy Dec 24 2021 From a scientific point of view, several challenges to renewable energy come from the intermittent nature of energy sources such as wind, solar photovoltaic and solar thermal. These problems are currently being addressed with research on power electronics converters, storage systems, Artificial Intelligence techniques, new materials and production technologies, numerical analysis techniques, among others. This research endeavours to reduce costs and find alternative energy sources that are competitive with fossil fuels. Consequently, these efforts of the scientific community will contribute to improving the quality of life on the planet. This book summarises ten years of contributions to these topics, and contains a selection of the best papers presented at the International Conferences on Renewable Energy and Power Quality (ICREPQ) from 2003 to 2012. These contributions have been selected by a team of voluntary reviewers, with two to four reviewers assigned to each paper. At the end of this process only about 5% of all presented papers were selected. Considering each paper had been reviewed before, in order to be accepted for the conference, the selected papers represent "the best of the best". The contributors to this book represent some of the leading authorities in their areas of expertise. This book will be of particular interest to professional engineers and researchers dealing with renewable energy exploitation, but will also prove useful to postgraduate level students. In addition, it can be used as a reference book for engineers, physicists and mathematicians who are interested and involved in the operation, project management, design, and analysis of renewable sources equipment.

Using Technology Tools to Innovate Assessment, Reporting, and Teaching Practices in Engineering Education May 17 2021 Many can now conclude that utilizing educational technologies can be considered the primary tools to inspire students to learn. Combining these technologies with the best teaching and learning practices can engage in creativity and imagination in the engineering field. Using Technology Tools to Innovate Assessment, Reporting, and Teaching Practices in Engineering Education highlights the lack of understanding of teaching and learning with technology in higher education engineering programs while emphasizing the important use of this technology. This book aims to be essential for professors, graduate, and undergraduate students in the engineering programs interested learning the appropriate use of technological tools.

Routledge Handbook of Private Security Studies Oct 22 2021 This new Handbook offers a comprehensive overview of current research on private security and military companies, comprising essays by leading scholars from around the world. The increasing privatization of security across the globe has been the subject of much debate and controversy, inciting fears of private warfare and even the collapse of the state. This volume provides the first comprehensive overview of the range of issues raised by contemporary security privatization, offering both a survey of the numerous roles performed by private actors and an analysis of their implications and effects. Ranging from the mundane to the spectacular, from secretive intelligence gathering and neighbourhood surveillance to piracy control and warfare, this Handbook shows how private actors are involved in both domestic and international security provision and governance. It places this involvement in historical perspective, and demonstrates how the impact of security privatization goes well beyond the security field to influence diverse social, economic and political relationships and institutions. Finally, this volume analyses the evolving regulation of the global private security sector. Seeking to overcome the disciplinary boundaries that have plagued the study of private security, the Handbook promotes an interdisciplinary approach and contains contributions from a range of disciplines, including international relations, politics, criminology, law, sociology, geography and anthropology. This book will be of much interest to students of private security companies, global governance, military studies, security studies and IR in general.

Higher Education and the Future of Graduate Employability Dec 12 2020 This book challenges the dominant 'employability skills' discourse by exploring socially connected and networked perspectives to learning and teaching in higher education. Both learning and career development happen naturally and optimally in ecologies, informal communities and partnerships. In the digital age, they are also highly networked. This book presents ten empirical case studies of educational practice that investigate the development of learner capabilities, teaching approaches, and institutional strategies in higher education, to foster lifelong graduate employability through social connectedness.

Anti-Access Warfare Sep 08 2020 The book is the definitive conceptual and historical introduction to the concept of anti-access strategies. Unlike current studies, it is not simply technology focused. Nor is it primarily intended as critique of the current Air-Sea Battle concept. It combines conceptual thinking with historical examples and potential scenarios in order to identify options for future defense planning. Strategies of "anti-access," also known as "area denial" (more recently combined into the awkward acronym "A2/AD") are presumed to be the primary threats to the employment of U.S. military forces in overseas crises. This presumption has gradually evolved into a joint concept of "operational access." Anti-access capabilities appear to be the current military posture of the People's Republic of China and Islamic Republic of Iran. The study of anti-access or area denial strategies for use against American power projection capabilities has strong naval roots—which have been largely ignored by the most influential commentators. In reality, denial of access was the Soviet Navy's operational objective during the Cold War. The first use of the actual anti-access term can be traced to a series of "anti-Navy" studies by the Office of Net Assessment designed to examine the ability of the U.S. Navy to carry out its Maritime Strategy and, later, "...From the Sea" strategic vision. Sustained long-range power projection is both a unique strength of U.S. military forces and a requirement for an activist foreign policy and forward defense. In more recent years, the logic of the anti-access approach has been identified by the Department of Defense as a threat to this U.S. capability and the joint force; countering it is one of the defense priorities identified in the President's directions issued this past January. In addition to potential regional powers, a number of think-tanks have suggested that non-state actors, such as terrorist organizations, are developing anti-access/area denial capabilities. The book's conclusions differ from most commentary on anti-access. Rather than a technology-driven post-Cold War phenomenon, the anti-access approach has been a routine element of grand strategy used by strategically weaker powers to confront stronger powers throughout history. But they have been largely unsuccessful when confronting a stronger maritime power. Although high technology weapons capabilities enhance the threat, they also can be used to mitigate the threat. Rather than

arguing against reliance on maritime forces—presumably because they are no longer survivable—the historical analysis argues that maritime capabilities are key in “breaking the great walls.”
